F3X26-TB Industrial Router User Manual

This user manual is suitable for the following model:

Model	Type
F3X26-TB-FL	FDD/TDD-LTE WIFI Industrial Router
F3X26-TB-L	LTE WIFI Industrial Router
F3X26-TB-FL-SIM2	FDD/TDD-LTE WIFI Industrial Router
F3X26-TB-L-SIM2	LTE WIFI Industrial Router

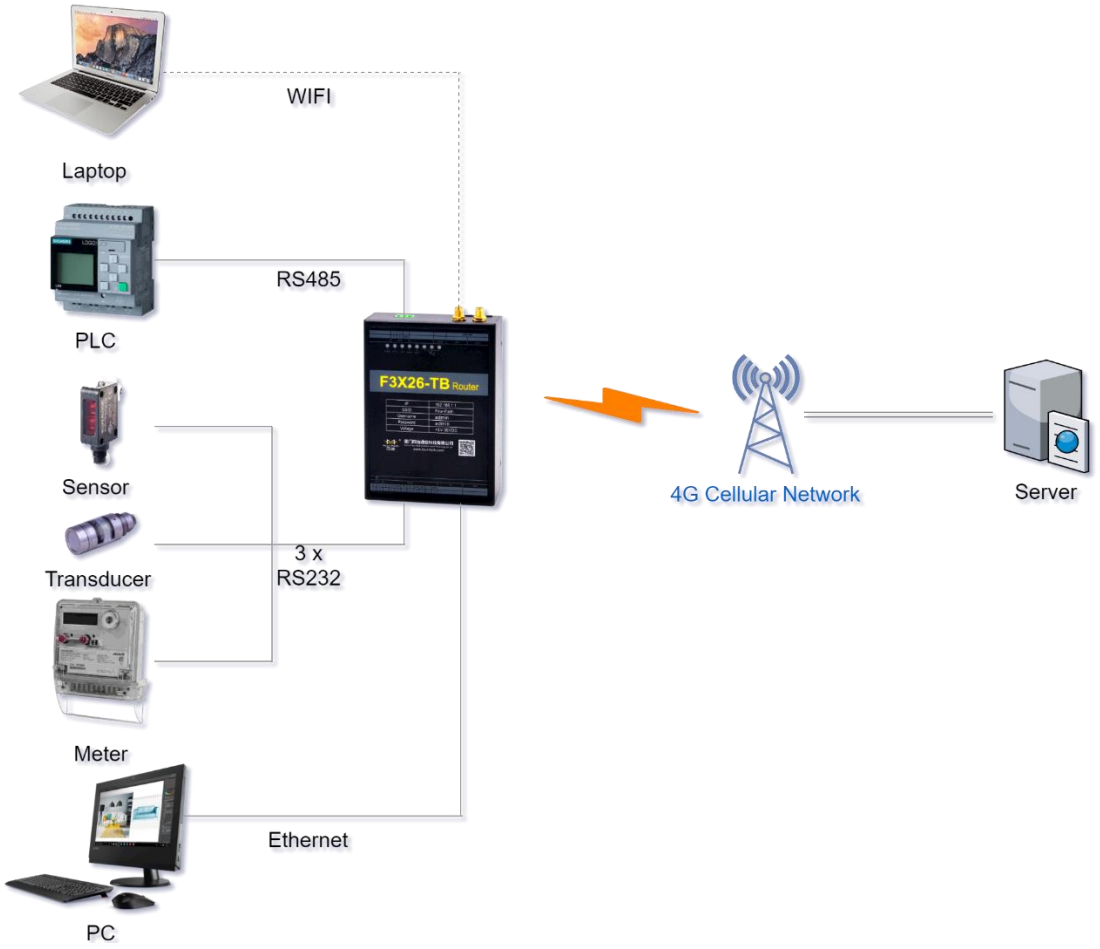
Chapter 1 Brief Introduction of Product

1.1 General

F3X26-TB Industrial Router is an IoT wireless communication router. It is using public cellular network GPRS/CDMA/WCDMA/EVDO/LTE to provide long distance, wireless and large data transmission function for users.

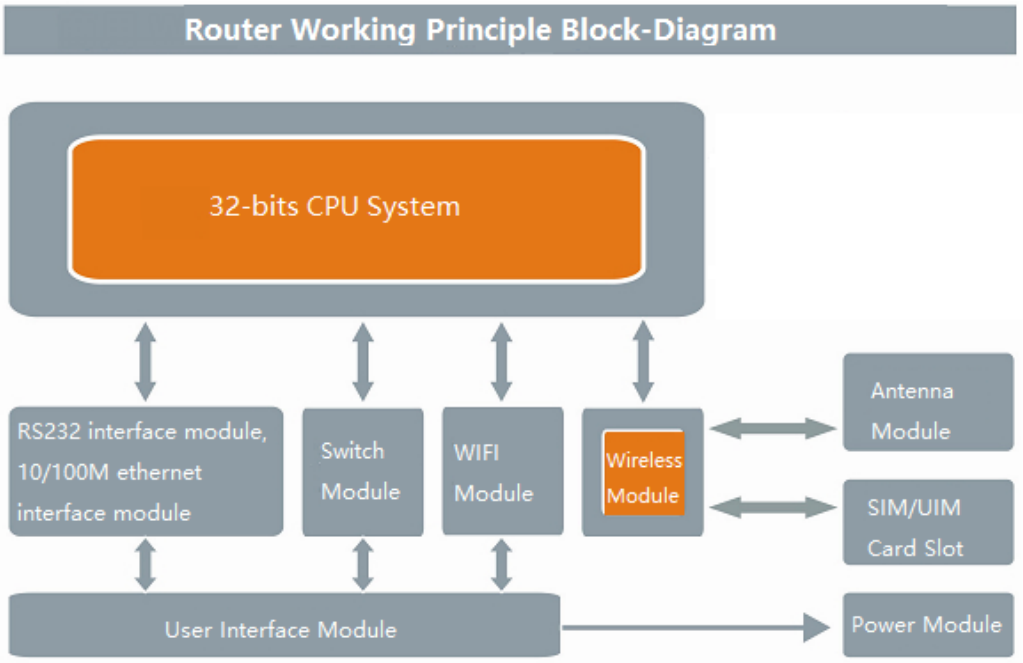
The product uses the high-performance industrial-grade CPU and wireless module, with the embedded real-time operating system as the software support platform. It provides a RS232 (or RS485), 1 ethernet LAN, 1 ethernet WAN and a WIFI, can be connected to the serial device, ethernet devices and WIFI devices at the same time, achieve data pass-through function.

The product has been widely used in the M2M industry of the IoT industrial chain, such as smart grid, intelligent transportation, smart home, finance, mobile POS terminals, supply chain automation, industrial automation, intelligent building, fire protection, public safety, environmental protection, meteorology, digital medical, telemetry, agriculture, forestry, water, coal, petrochemical and other related fields.



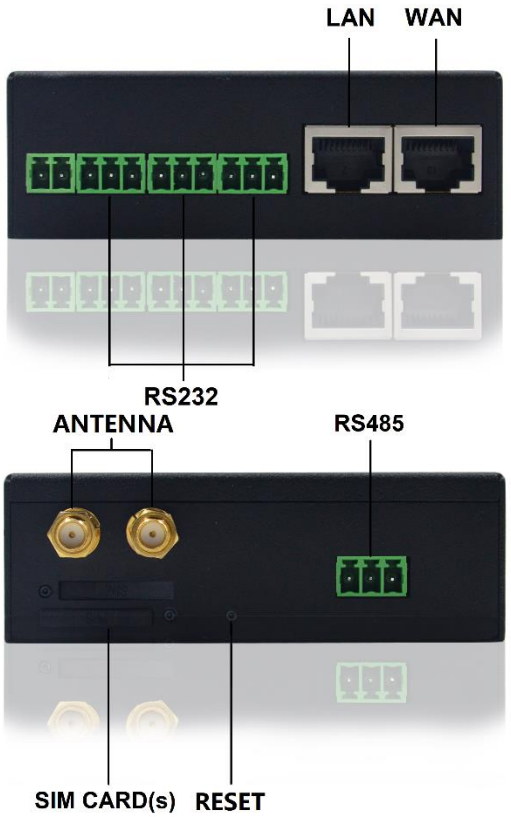
Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

1.2 Working Principle Diagram



1.3 Specification

Product Interface



Note: There may be differences between models of accessories and interfaces, actual products shall prevail.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Power

Item	Content
Input Voltage	DC 12V/1.5A
Accepted Voltage Range	DC 5～36V

Power Consumption

Work Mode	Consumption
Standby	95～135mA@12VDC
Communicating	165～220mA@12VDC

Physical Properties

Item	Content
Casing	Metal casing, IP30 protection level
Dimensions	126mm x 89mm x 30mm (excluding antennas and mountings)
Weight	320g

Others

Item	Content
Operating Temperature	-35～+75℃
Storage Temperature	-40～+85℃
Relative Humidity	95% (non-condensing)

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Chapter 2 Installation Introduction

2.1 Overview

Router must be installed correctly before they achieve the designed features, the device must be installed by the guidance of a qualified engineer who recognized by the Company.

- *Warning：*
  Please do not install the device while powered on.

2.2 Encasement List

To transport safety, you will need a reasonable packaging. After you unpack the device, please keep the packaging materials for future transport needs.

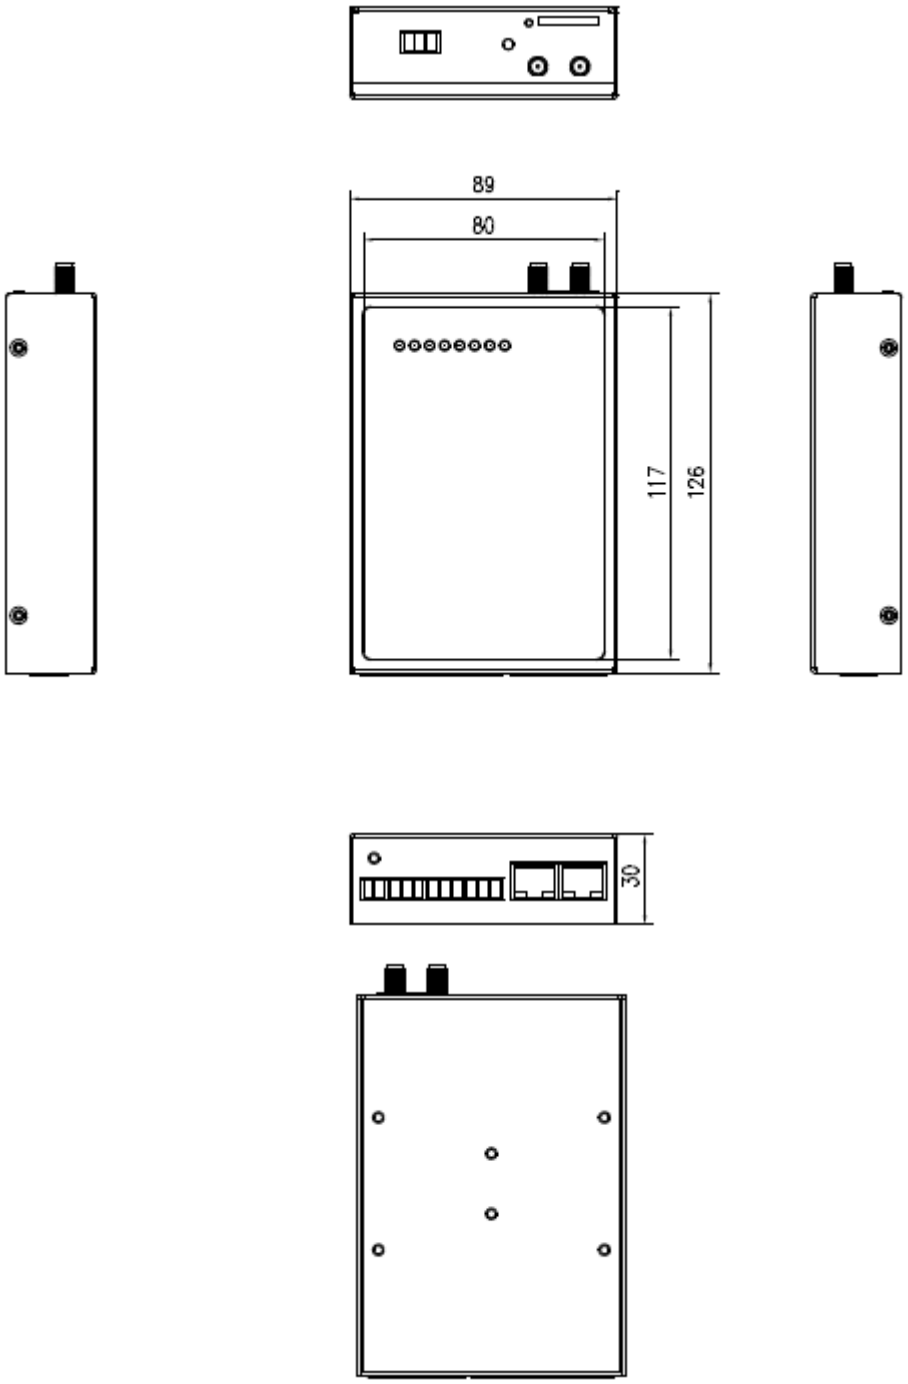
It includes the following components:

- 1 x Host Device (Packaging according to the order)
- 1 x Wireless cellular antenna (SMA male head)
- 1 x WIFI antenna (SMA male head)
- 1 x Power cable
- 1 x RS232 Console Cable
- 1 x RS485 Console Cable
- Product certification
- Warranty Card

2.3 Installation and Cable Connection

Dimension（unit：mm）

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



Antenna Installation:

Wireless WAN antenna interface is a standard SMA female antenna interface (marked as ‘ANT’), put the cellular antenna on the interface, make sure it has been tightening to avoid affect the signal quality.

Wireless LAN antenna interface is a standard SMA female antenna interface (marked as ‘WIFI’), put the WIFI antenna on the interface, make sure it has been tightening to avoid affect the signal quality.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Note: The wireless cellular antenna cannot be mixed up with WIFI antenna, otherwise the device cannot work properly.

SIM/UIM Card Installation：

Gently press the eject button (the round dot on the left side of the card slot) with a pen or pin, SIM/UIM slot will pop up. When installing SIM/UIM card, put the card into the card slot and make sure the metal chip surface is facing outside, then insert the card slot in to the device.

(Following is an example for single card version)

Gently press the eject button and put the SIM/UIM into the slot

Insert the slot back to the device

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Ethernet Cable Connection:

Connect one side of the ethernet cable to the LAN port on the router, the other side to the user device's ethernet port. The cable's definition is as following:

RJ45-1	RJ45-2	Color
1	1	White/Orange
2	2	Orange
3	3	White/Green
4	4	Blue
5	5	White/Blue
6	6	Green
7	7	White/Brown
8	8	Brown

3.5mm Terminal Block Interface Definition：

The 11-pin terminal block includes POWER and 3 x RS232 function. The definition is as following:

No.	Definition	Description	Extension
1	PWR	Device power supply positive	
2	GND	Device power supply negative	
3	RXD	RS232-1 receiving	
4	TXD	RS232-1 sending	
5	GND	RS232-1 GND	
6	RXD	RS232-2 receiving	
7	TXD	RS232-2 sending	
8	GND	RS232-2 GND	
9	RXD	RS232-3 receiving	
10	TXD	RS232-3 sending	
11	GND	RS232-3 GND	

The 3-pin terminal block on the other side includes a RS485 function. The definition is as following:

No.	Definition	Description	Extension
1	GND	RS485 GND	
2	A	RS485 A	
3	B	RS485 B	

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Serial port connection: (When needed)

Connect the serial cable to the router with the terminal block interface, the DB9 side connect to the user's device. The cable's definition is as following:

Terminal block	Color	Definition	DB9F	Description	On router's end
1	Brown	TXD	2	Sending	Sending
2	Blue	RXD	3	Receiving	Receiving
3	Black	GND	5	GND	

2.4 About Power

The F3X26-TB router is usually used in complex external environments. To fit the environment and improve the system stability, the router uses advanced power technology. User can use standard 12VDC/1.5A power adapter which come with the device, or use any DC 5-36V power to provide power supply directly for the device. When user use extra power supply, it must be stable (the ripple should less than 300mV, and the instantaneous voltage should not exceed 36V), and ensure the power is greater than 8W.

We recommend using the standard 12VDC/1.5A power adapter which come with the device.

2.5LED Indicator

Router has the following LED indicators: 'PWR', 'Online', 'LAN', 'WAN/LAN', 'WIFI.

Indicator	Status	Description
PWR	On	Power supply is fine
	Off	No power
Online	On	Device is online
	Off	Device is offline
LAN	Off	No connection on LAN
	On/Flashing	Detected LAN connection/Communicating
WAN/LAN	Off	WAN/LAN no connection
	On/Flashing	WAN/LAN already connected/Communicating
WIFI	Off	WIFI is not on
	On	WIFI is on

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

2.6 Reset Button

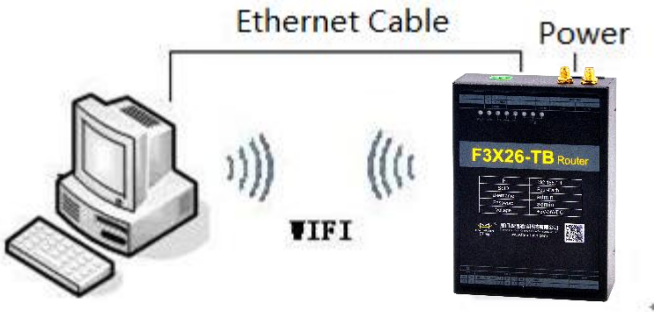
Router has a rest button, marked as ‘Reset’. This button is used for restoring the device back to factory setting. Use a pen or pin and push the reset button for 15 seconds and release, the router will reset all the setting. After 10 seconds, the router will automatically reboot (the ‘System’ LED indicator will go off for 10 seconds and back to normal status).

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Chapter 3 Configuration and Management

3.1 Configuration Connection

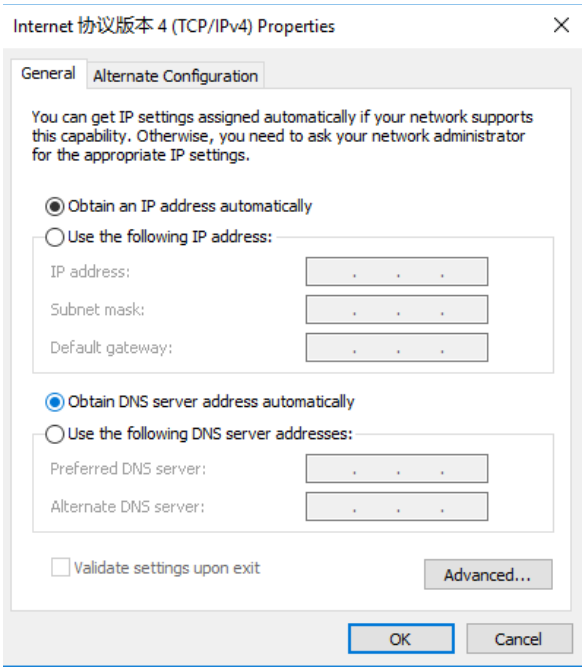
The router should be connected to the PC with the supplied ethernet cable or WIFI connection before doing the configuration for the router. When using the wired connection method, insert the ethernet cable into any LAN port of the router, insert the other side of the cable into the ethernet port on your PC. When using the WIFI connection method, the default SSID is 'FOUR-FAITH', no password.



3.2 Access the Configuration Page

3.2.1 PC IP Address Setting（Two Methods）

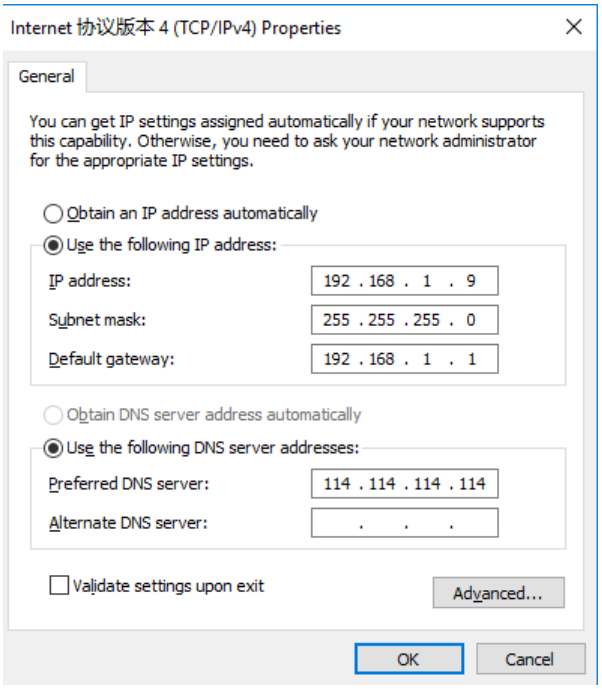
First method: Automatically obtain IP address



Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Second method: static IP

Set the PC IP address as 192.168.1.9 (or other IP address in the same 192.168.1 segment), subnet mask is 255.255.255.0, default gateway is 192.168.1.1. DNS can be set to any DNS server available in that area.

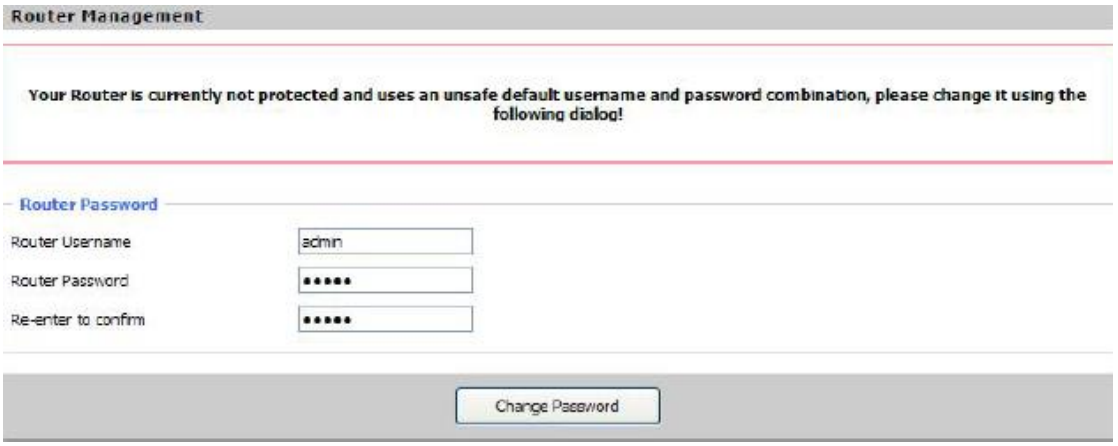


3.2.2 Login to Configuration Page

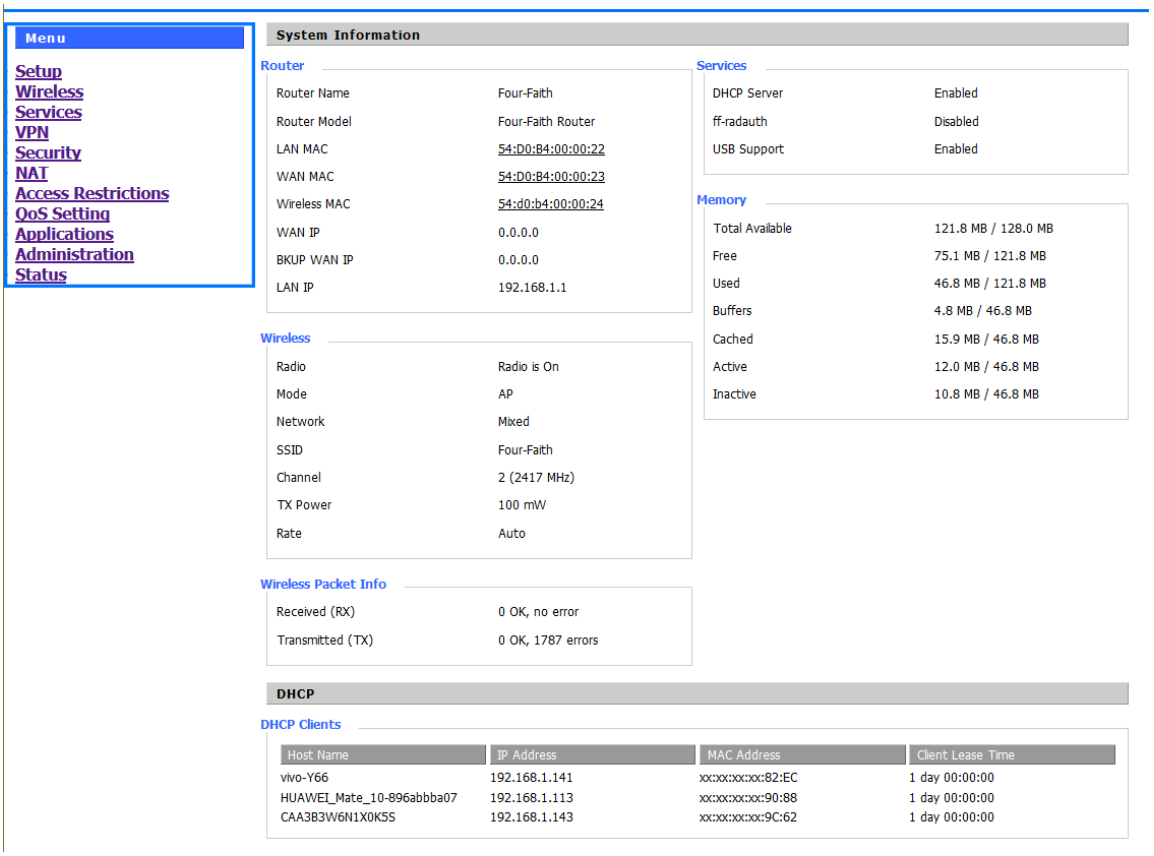
This chapter will introduce the main functions for all the setting pages. Users can use web browser on the connected PC to access the router's configuration portal. There are 11 main pages: Setup, Wireless, Services, VPN, Security, Access Restrictions, NAT, QoS Setting, Applications, Administration, Status.

To access the web-based configuration tool, open IE or other browser and type in the default router IP address 192.168.1.1, then press enter. When access to the web configuration page first time, the following page will show up, ask user whether to change the default username and password or not. Click 'Change Password' to proceed to the next step.

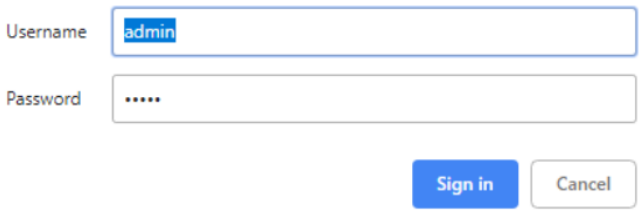
Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



You will see a page which similar as the following page after clicking the button.



User may need to type in username and password in order to access any items of the menu.



Type in the correct username and password, then click Submit. the default username is admin,

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

password is admin. You can change it under the Management section.

3.3 Configuration and Management

3.3.1 Setting

Click ‘Setup’, the first page is for basic settings. On this page, you can change some basic settings, click ‘Saved’ button to save the setting but it won’t take effect, click the ‘Apply Settings’ button to let the changes take effect, or click ‘Cancel Changes’ to undo the changes.

3.3.1.1 Basic Setting

‘WAN Connection Type’ is the section to configure how to let the router connect to internet. You can get the detail information from your Internet Services Provider (IPS).

DUAL LINK OPTION

Enable dual link option to enable both WAN online (4G+Ethernet WAN or Dual SIM Card). Click disable means to enable only single link (main link), and backup link is disabled. Click enable means the WAN source can work between main link and backup link. If main link is online, it uses main link. If main link is offline, it will switch to backup link. So as when backup link is offline, the main link will be online.
Note: when the dual link option is enabled, they need to configure relevant ‘keep online function’ if the connection type of the main link and backup link is 'Static IP' or 'DHCP'. The detailed configuration refers to the ‘Keep Online’ section. The connection type of the main link and the backup link cannot be the same type, and cannot choose the same physical WAN port. For example, if the main link is set to 'Static IP', 'DHCP', or 'PPPOE', the backup link must be set to dhcp-4G, dhcp-bkup4G, 3G Link 1 or 3G Link 2, otherwise there will be a warning on the page. *Some of these functions only available for Dual-SIM version.

WAN Connection Type

Pick the connection type from the dropdown list. There are 7 connection types: Disabled, Static IP, Automatic Configuration-DHCP, PPPOE, 3G Link 1, 3G Link 2, dhcp-4G

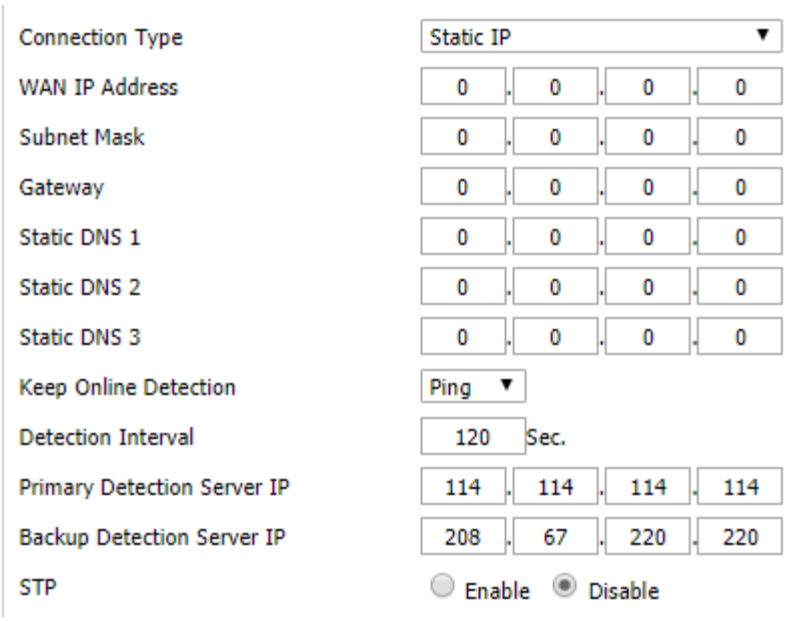
Type 1: Disable

Disable WAN port connection

Type 2: Static IP

This connection type usually used for dedicated line such as business or enterprise fiber. The ISP will provide you with the detail parameters such as IP address, subnet mask, gateway and DNS. You will need to use these parameters to set up the router.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



WAN IP Address: the IP address which allocated by user or provided by the ISP

Subnet Mask: the subnet mask which allocated by user or provided by the ISP

Gateway: the gateway which allocated by user or provided by the ISP

Static DNS (1-3): the DNS which allocated by user or provided by the ISP

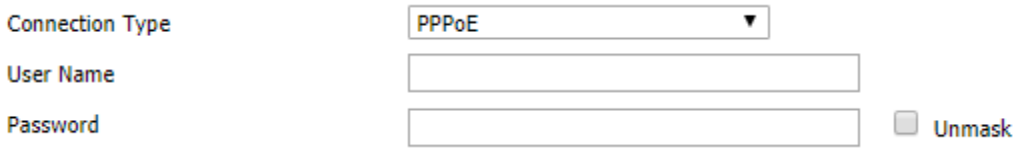
Type 3: Automatic Configuration - DHCP

The default WAN connection type. Some cable provider and residential internet service use this connection type.

The IP address of the WAN port obtained by DHCP

Type 4: PPPoE

China Telecom and China Netcom ADSL services usually use this type of connection, other ISP may also use this type. PPPoE connection needs ISP to provide you the username, password and the service name, this information need to put in the related setting fields of the router.

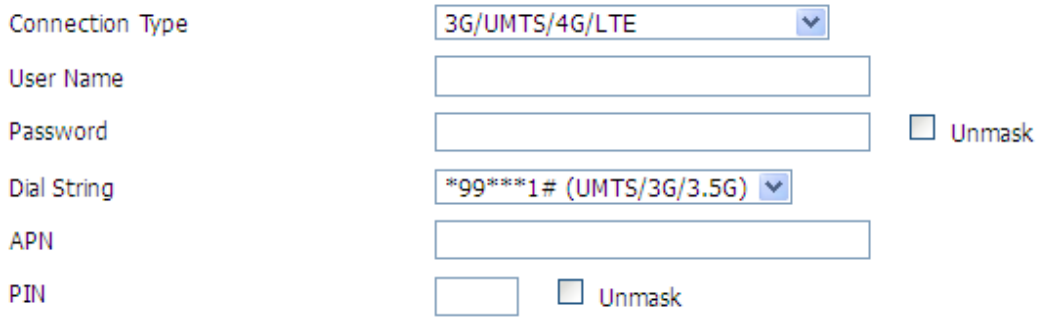


User Name: the user name for login to the Internet

Password: the password for login to the Internet

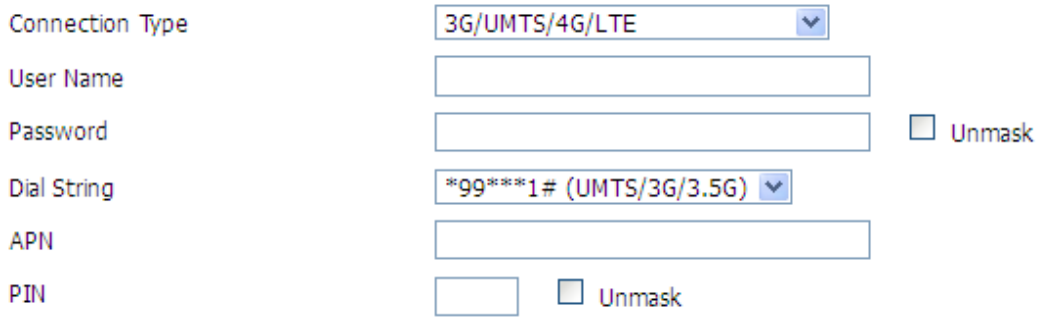
Type 5: 3G Link 1

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



User Name: The APN user name of the ISP(Internet Service Provider)
Password: The password of the ISP
Dial String: ISP's dial number
APN: access point name of the ISP
PIN: PIN code of users' SIM card

Type 6: 3G Link 2



Connection Type

Connection Type: including auto, force 3G, force 2G and so on, if using 4G module, it will have related 4G options, based on the user's requirement and different cellular module to select.

Type 7: DHCP-4G

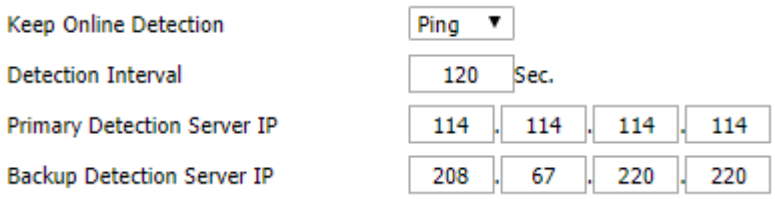
WAN IP obtained by DHCP-4G. This type is a high-speed communication network connection of 4G wireless network module. If you are using the standard configuration 4G module, we recommend you try this type first.

Type 8: DHCP-BKUP4G (Only available on Dual-SIM version)

WAN IP obtained by DHCP-BKUP4G

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Keep Online



This function is used to detect whether the Internet connection is active. If this setting is on, the router will automatic check the internet connection. When it detects invalid connection, or the connection is disconnected, the system will automatically reconnect and rebuild a valid internet connection. If the network quality is poor or it is under a private network, we recommend using the 'Router' mode.

Keep Online Methods:

None: Disable this function

Ping: Send ping packet to detect the connection, when choose this method, users should also configure "Detection Interval", "Primary Detection Server IP" and "Backup Detection Server IP" items.

Route: Detect connection using route method, when choose this method, users should also configure "Detection Interval", "Primary Detection Server IP" and "Backup Detection Server IP" items.

PPP: Detect connection using PPP method, when choose this method, users should also configure "Detection Interval" item.

Detection Interval: the time interval between two detections, the unit is second

Primary Detection Server IP: the server used to response the Router's detection packet. This item is valid only in "Ping" and "Route" mode.

Backup Detection Server IP: the backup server used to response the Router's detection packet. This item is valid only in "Ping" and "Route" mode.

Force reconnect: this option allows you to schedule the PPPOE or 3G reconnection time.

Time: the reconnected time

STP

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

The Spanning Tree Protocol (STP) is a network protocol that builds a loop-free logical topology for Ethernet networks. The basic function of STP is to prevent bridge loops and the broadcast radiation that results from them.

Optional Configuration

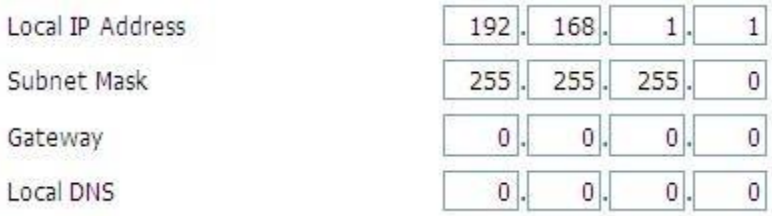
Router Name: set the Router name

Host Name & Domain Name: You can use these settings to provide host name and domain name. Some ISP will ask you to provide this information as identity. You must check with your ISP to make sure whether to configure host name and domain name. Leave it blank in most cases.

MTU: Max transfer unit. The default setting is “Auto”. You can manually input a specific value. We recommend set it from 1200 to 1500. For most DSL users, we recommend using 1492.

Router Internal Network Settings

Router IP



Local IP Address: IP address of the Router

Subnet Mask: the subnet mask of the Router

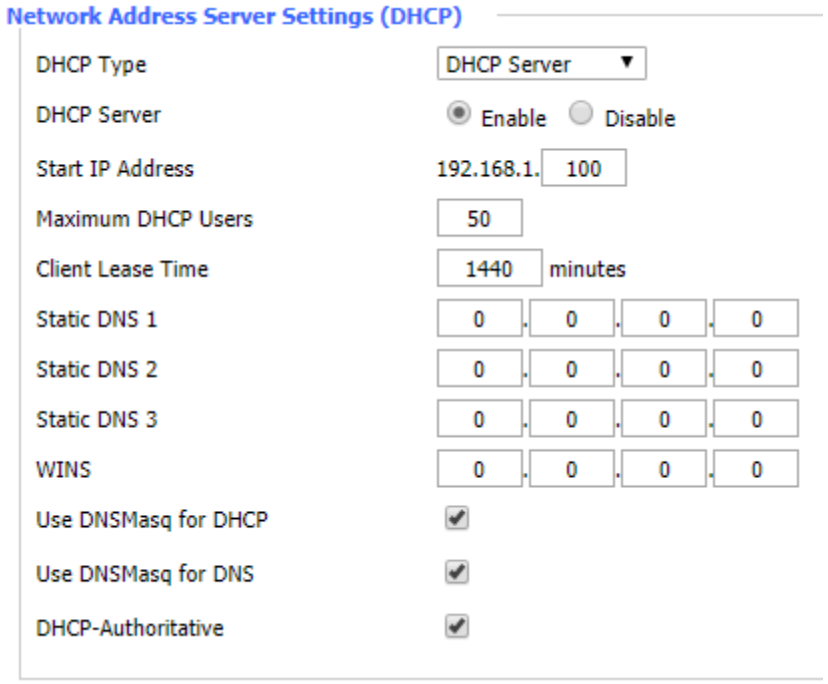
Gateway: set the internal gateway of the Router. By default, the internal gateway is the Router’s IP address

Local DNS: DNS server is auto assigned by network operator’s server. If you have your own DNS or other reliable DNS, you can use it. Otherwise leave it by default value

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Network Address Server Settings (DHCP)

These settings are for the router's Dynamic Host Configuration Protocol (DHCP) function. The router can work as a DHCP server. DHCP server will assign an IP address for each computer in the network. If you enable the DHCP server, you can set all the devices in the same network to obtain IP address and DNS automatically. Please make sure that there is no other DHCP server in the same network.



- **DHCP Type:** Including DHCP Server and DHCP Forwarder.

  You need input the DHCP Server address if the DHCP Type is DHCP Forwarder.

- **DHCP Server:** DHCP is enabled by default. If you are already have a DHCP server in the network or you do not want enable the DHCP server, then you can click the "Disable" button to disable this function.
- **Start IP Address:** Input a number (value range is 2 - 254) as the DHCP server start address. Default the start IP address is 192.168.1.100.
- **Maximum DHCP Users:** DHCP server assign IP address to the number of computers. The maximum number is 253, and the start IP address plus the number of computers should less than 255. Default number is 50.
- **Client Lease Time:** The Client Lease Time is the amount of time a network user will be allowed connection to the router with their current dynamic IP address. Enter the amount of time, in minutes, that the user will be "leased" this dynamic IP address.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

- **Static DNS (1-3):** The Domain Name System (DNS) is how the Internet translates domain or website names into Internet addresses or URLs. Users' ISP will provide them with at least one DNS Server IP address. If you wish to utilize another, enter that IP address in one of these fields. You can enter up to three DNS Server IP addresses here. The router will utilize them for quicker access to functioning DNS servers.
- **WINS:** The Windows Internet Naming Service (WINS) manages each PC's interaction with the Internet. If you are using a WINS server, enter that server's IP address here. Otherwise, leave it blank.
- **DNSMasq:** Domain name in the field of local search, increase the expansion of the host option, to adopt DNSMasq can assign IP addresses and DNS for the subnet, if select DNSMasq, dhcpd service is used for the subnet IP address and DNS.

Time Settings

Select time zone of your location. To use local time, leave the checkmark in the box next to Use local time.

NTP Client: Get the system time from NTP server

Time Zone: Time zone options

Summer Time (DST): set it depends on user's location

Server IP/Name: IP address of the NTP server, up to 32 characters. If blank, the system will find a server by default

Adjust Time

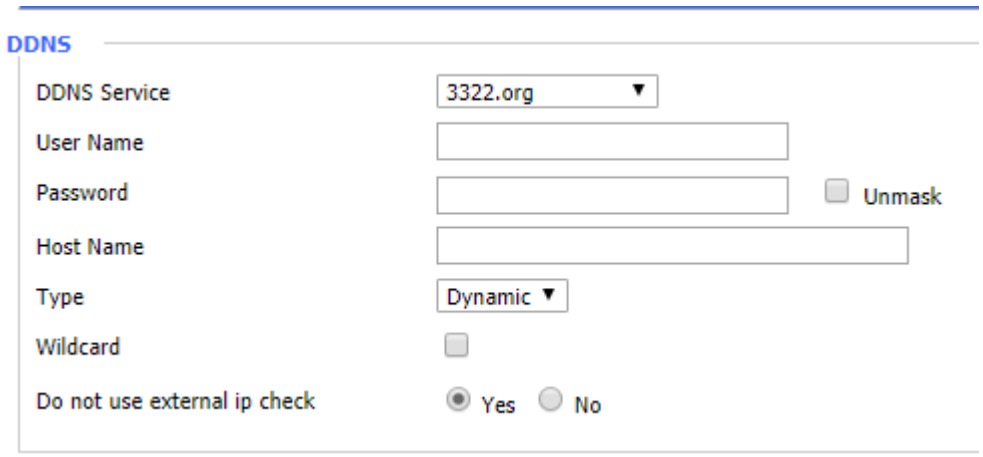
For the system time calibration, it has two methods can do it. First method is refreshing the web pages to obtain the current time automatically, and the other method is modifying the system time manually. Specially you can calibration the system manually when the system fails to get the NTP server.

3.3.1.2 Dynamic DNS

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

If user's network has a permanently assigned IP address, users can register a domain name and have that name linked with their IP address by public Domain Name Servers (DNS). However, if their Internet account uses a dynamically assigned IP address, users will not know in advance what their IP address will be, and the address can change frequently. In this case, users can use a commercial dynamic DNS service, which allows them to register their domain to their IP address, and will forward traffic directed at their domain to their frequently-changing IP address.

DDNS Service: Router currently support DynDNS, freedns, Zoneedit, NO-IP, 3322, easyDNS, TZO, DynSIP and Custom based on the user.



User Name: users register in DDNS server, up to 64 characters

Password: password for the user name that users register in DDNS server, up to 32 characters

Host Name: DDNS server host name, no length limitation

Type: depends on the server

Wildcard: support wildcard or not, the default is OFF. ON means *.host.3322.org is equal to host.3322.org

Do not use external ip check: Whether enable this function or not

Force Update Interval: unit is day, try forcing the update dynamic DNS to the server by set days

DDNS Status

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

DDNS Status shows connection log information

3.3.1.3 MAC Address Clone

Some ISP need the users to register their MAC address. The users can clone the Router MAC address to their MAC address registered in ISP if they do not want to re-register their MAC address

Clone MAC address can clone three parts: Clone LAN MAC, Clone WAN MAC, Clone Wireless MAC.

Noted that one MAC address is 48 characters, It can not be set to the multicast address(the first byte must be even). And MAC address value of network bridge br0 is determined by the smaller value of wireless MAC address and LAN port MAC address.

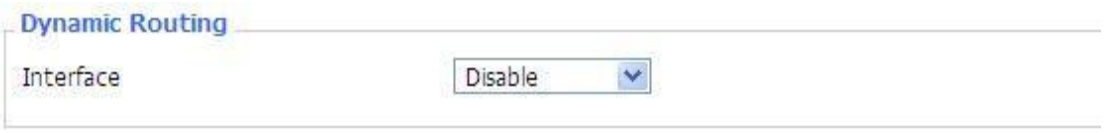
3.3.1.4 Advanced Router

Operating Mode: Gateway and Router

If the Router is hosting users' Internet connection, select Gateway mode. If another Router exists on their network, select Router mode.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Dynamic Routing



Dynamic Routing enables the Router to automatically adjust to physical changes in the network's layout and exchange routing tables with other Routers. The Router determines the network packets' route based on the fewest number of hops between the source and destination.

To enable the Dynamic Routing feature for the WAN side, select WAN. To enable this feature for the LAN and wireless side, select LAN&WLAN. To enable the feature for both the WAN and LAN, select Both. To disable the Dynamic Routing feature for all data transmissions, keep the default setting, Disable.

Note：Dynamic Routing is not available in Gateway mode

Static Routing

Select set number: 1-50

Route Name: defined routing name by users, up to 25 characters

Metric: 0-9999

Destination LAN NET: the Destination IP Address is the address of the network or host to which users want to assign a static route

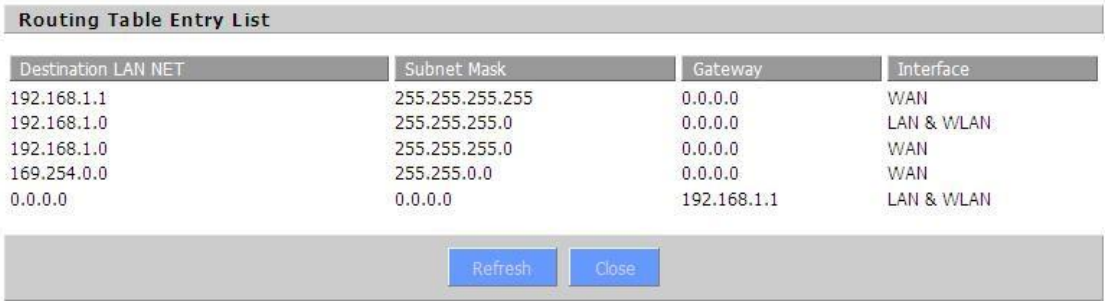
Subnet Mask: the Subnet Mask determines which portion of an IP address is the network portion, and which portion is the host portion

Gateway: IP address of the gateway device that allows for contact between the Router and

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

the network or host.

Interface: indicate users whether the Destination IP Address is on the LAN & WLAN (internal wired and wireless networks), the WAN (Internet), or Loopback (a dummy network in which one PC acts like a network, necessary for certain software programs) **Show Routing Table**

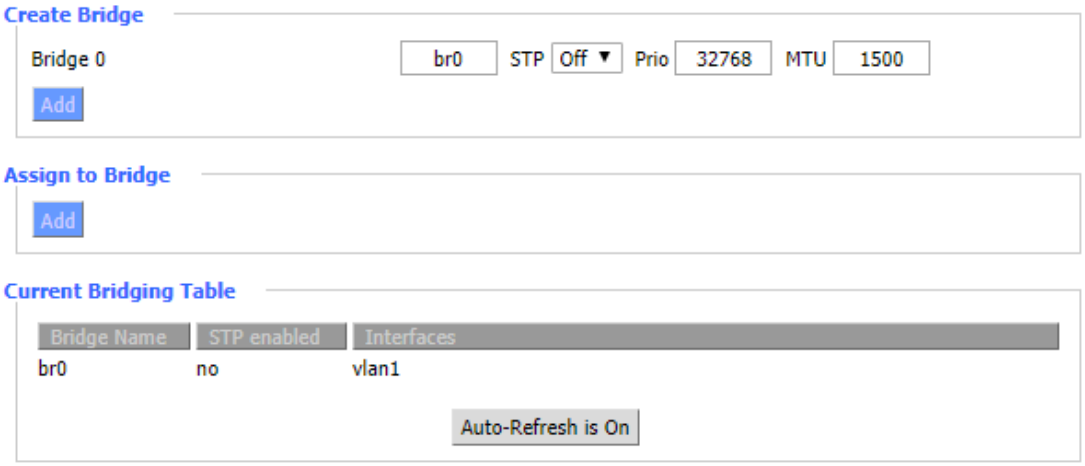


3.3.1.5 VLANs

VLANs allow user to divide different VLAN port as they need, the system support VLAN1 to VLAN15, total is 15 VLAN port. LAN port and WAN port cannot be set to the same VLAN.

3.3.1.6 Networking

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



Bridging-Create Bridge: creates a new empty network bridge for later use. STP means Spanning Tree Protocol and with PRIO users are able to set the bridge priority order. The lowest number has the highest priority.

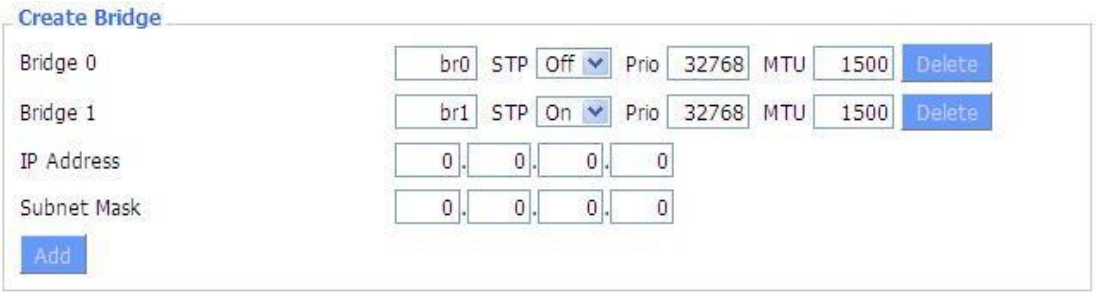
Bridging - Assign to Bridge: allows users to assign any valid interface to a network bridge. Consider setting the Wireless Interface options to Bridged if they want to assign any Wireless Interface here. Any system specific bridge setting can be overridden here in this field.

Current Bridging Table: shows current bridging table

Create steps as below:

Click 'Add' to create a new bridge, configuration is as below:

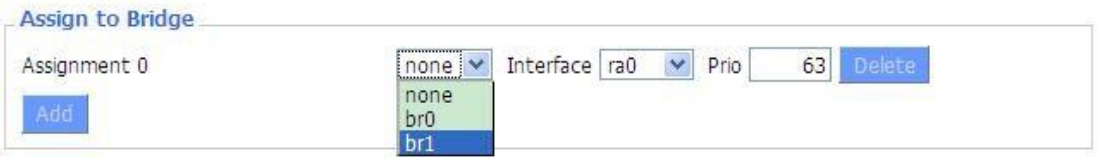
Create bridge option: the first br0 means bridge name. STP means to on/off spanning tree protocol. Prio means priority level of STP, the smaller the number, the higher the level. MTU means maximum transfer unit, default is 1500, delete if it is not need. And then click 'Save' or 'Add'. Bride properties is as below:



Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Enter bridge IP address and subnet mask, click 'Add' to create a bridge.

Note: Only create a bride can apply it.



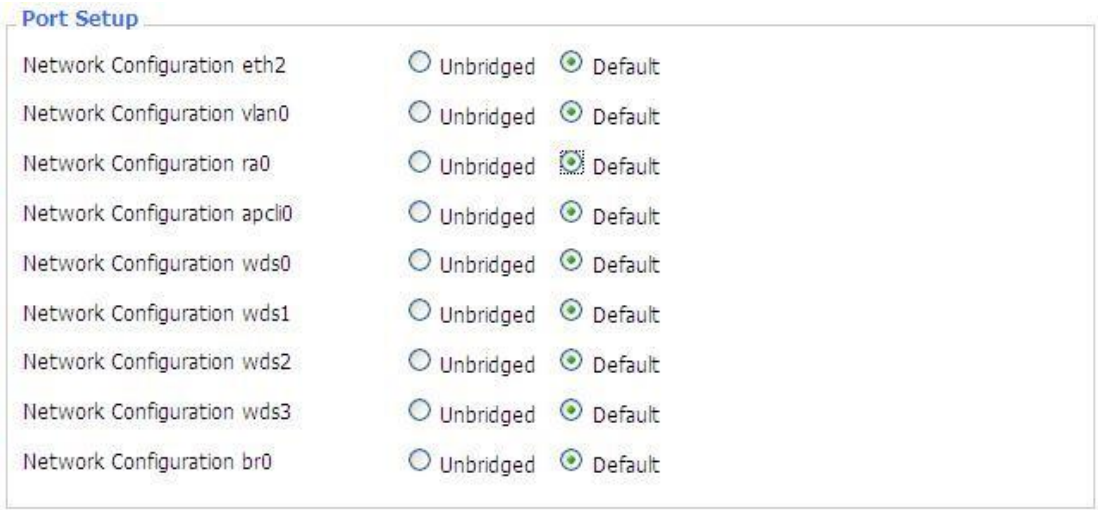
Assign to Bridge option: to assign different ports to created bridge. For example: assign port (wireless port) is ra0 in br1 bridge as below:

Prio means priority level: work if multiple ports are within the same bridge. The smaller the number, the higher the level. Click 'Add' to take it effect.

Note: corresponding interface of WAN ports interface should not be binding, this bridge function is basically used for LAN port, and should not be binding with WAN port

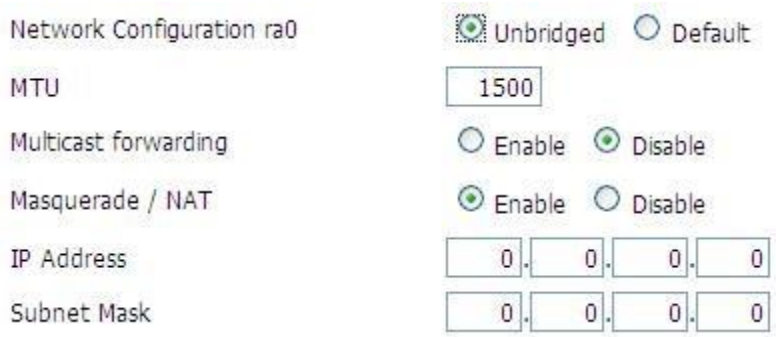
If bind success, bridge binding list in the list of current bridging table is as below:

To make br1 bridge has the same function with DHCP assigned address, users need to set multiple DHCP function, see the introduction of multi-channel DHCPD:



Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Port Setup: Set the port property, the default is not set



Choose not bridge to set the port's own properties, detailed properties are as below:

MTU: maximum transfer unit

Multicast forwarding: enable or disable multicast forwarding

Masquerade/NAT: enable or disable Masquerade/NAT

IP Address: set ra0's IP address, and do not conflict with other ports or bridge

Subnet Mask: set the port's subnet mask

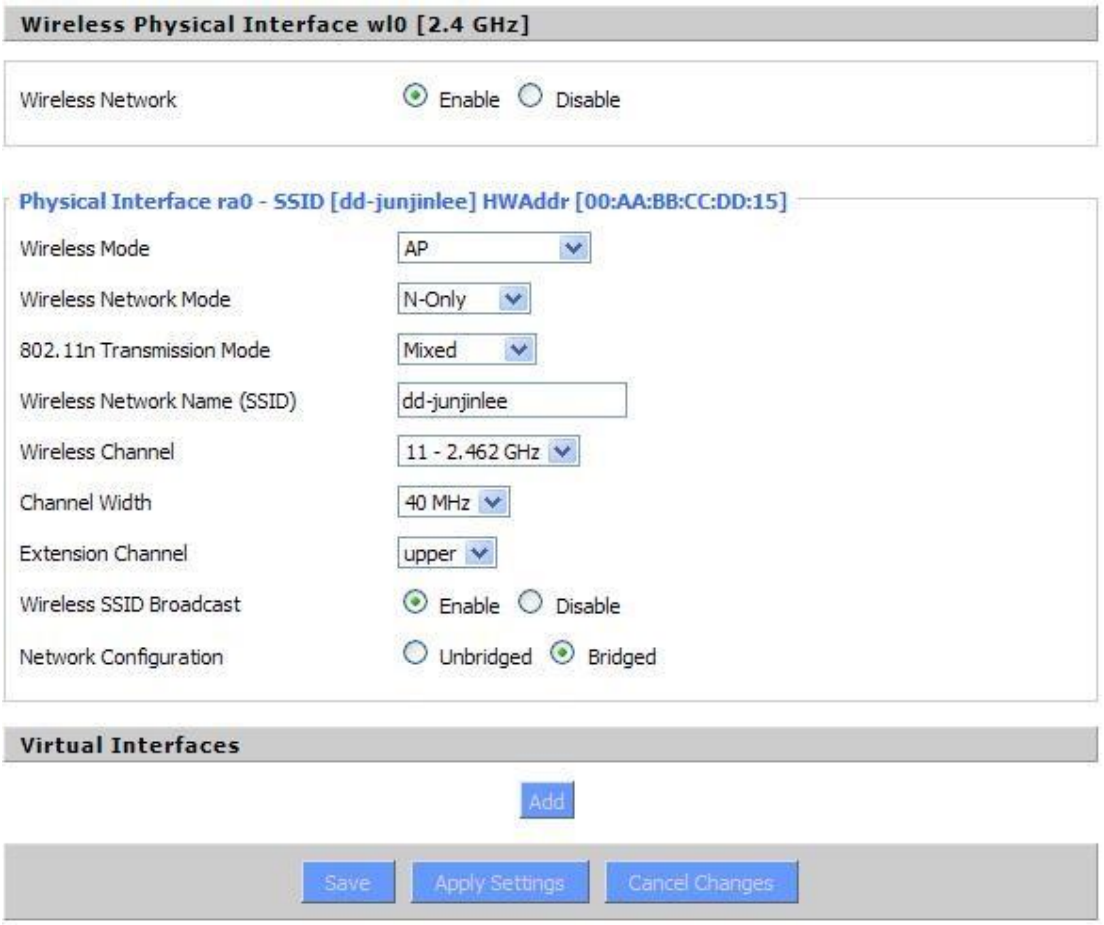
Multiple DHCPD: using multiple DHCP service. Click 'Add' in multiple DHCP server to appear relevant configuration. The first means the name of port or bridge (do not be configured as eth0), the second means whether to on DHCP. Start means start address, Max means maximum assigned DHCP clients, Leasetime means the client lease time, the unit is second, click 'Save' or 'Apply' to put it into effect after setting.

Note: Only configure and click 'Save' can configure the next, can not configure multiple DHCP at the same time.

3.3.2 Wireless

3.3.2.1 Basic Settings

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



Wireless Network：“Eanble”, radio on. “Disable”, radio off.

Wireless Mode：AP, Client, Adhoc, Repeater, Repeater Bridge four options。

Wireless Network Mode：

Mixed：Support 802.11b, 802.11g, 802.11n wireless devices.

BG-Mixed：Support 802.11b, 802.11g wireless devices.

B-only：Only supports the 802.11b standard wireless devices.

B-only：Only supports the 802.11b standard wireless devices.

G-only：Only supports the 802.11g standard wireless devices.

NG-Mixed：Support 802.11g, 802.11n wireless devices.

N-only：Only supports the 802.11g standard wireless devices.

8021.11n Transmission Mode：In the wireless network mode to "N-only" choose to transfer its transmission mode.

Greenfield: When you determine the surrounding environment, there is no other 802.11a/b/g devices use the same channel, use this mode to increase throughput. Other 802.11a/b/g devices use the same channel in the environment, the information you send

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

may generate an error, re-issued.

Mixed：This mode is contrary to the green mode, but will reduce the throughput.

Wireless Network Name(SSID): The SSID is the network name shared among all devices in a wireless network. The SSID must be identical for all devices in the wireless network. It is case-sensitive and must not exceed 32 alphanumeric characters, which may be any keyboard character. Make sure this setting is the same for all devices in your wireless network.。

Wireless Channel： A total of 1-13 channels to choose more than one wireless device environment, please try to avoid using the same channel with other devices.。

Channel Width：20MHZ and 40MHZ。

Extension Channel：Channel for 40MHZ, you can choose upper or lower.

Wireless SSID Broadcast：

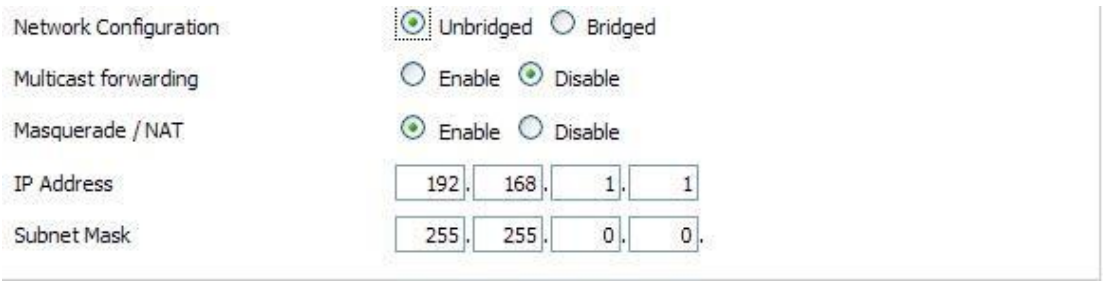
Enable：SSID broadcasting.

Disable：Hidden SSID.

Network Configuration：

Bridged：Bridge to the Router, under normal circumstances, please select the bridge.

Unbridged： There is no bridge to the Router, IP addresses need to manually configure.



Virtual Interfaces：Click Add to add a virtual interface. Add successfully, click on the remove, you can remove the virtual interface。

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

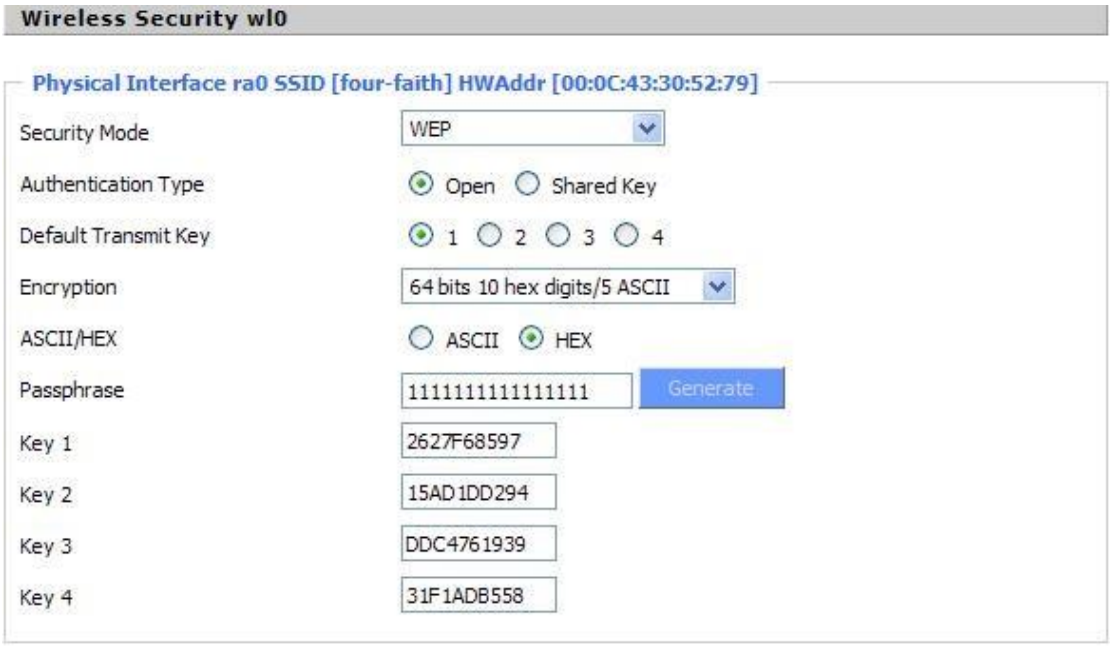
AP Isolation： This setting isolates wireless clients so access to and from other wireless clients are stopped.

Note：Save your changes, after changing the "Wireless Mode", "Wireless Network Mode", "wireless width", "broadband" option, please click on this button, and then configure the other options.

3.3.2.2 Wireless Security

Wireless security options used to configure the security of your wireless network. This route is a total of seven kinds of wireless security mode. Disabled by default, not safe mode is enabled. Such as changes in Safe Mode, click Apply to take effect immediately.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



WEP：Is a basic encryption algorithm is less secure than WPA.Use of WEP is discouraged due to security weaknesses, and one of the WPA modes should be used whenever possible. Only use WEP if you have clients that can only support WEP (usually older, 802.11b-only clients).

Authentication Type： Open or shared key.

Default Transmit Key： Select the key form Key 1 - Key 4 key.

Encryption：There are two levels of WEP encryption, 64-bit (40-bit) and 128-bit. To utilize WEP, select the desired encryption bit, and enter a passphrase or up to four WEP key in hexadecimal format. If you are using 64-bit (40-bit), then each key must consist of exactly 10 hexadecimal characters or 5 ASCII charceters. For 128-bit, each key must consist of exactly 26 hexadecimal characters. Valid hexadecimal characters are "0"-"9" and "A"-"F".

ASCII/HEX: ASCII, the keys is 5 bit ASCII characters/13bit ASCII characters.

HEX, the keys is 10bit/26 bit hex digits.

Passphrase： The letters and numbers used to generate a key.

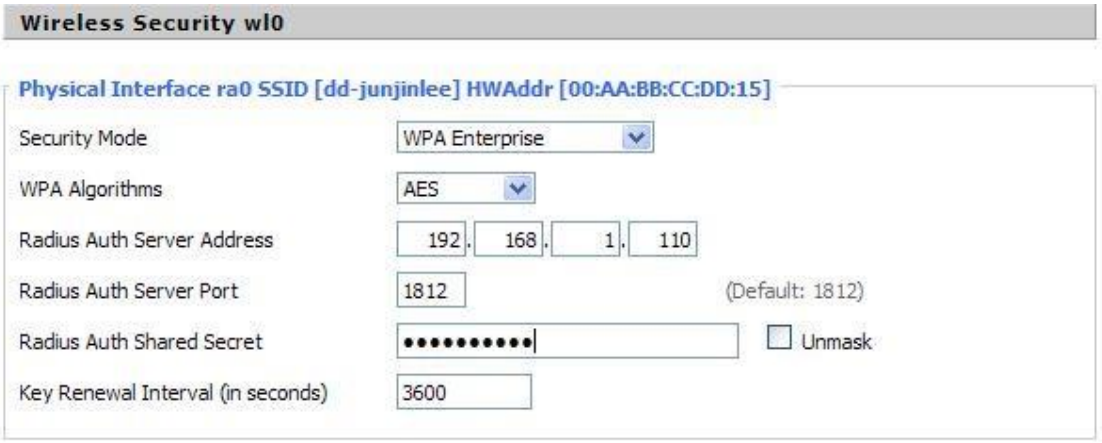
Key1-Key4： Manually fill out or generated according to input the pass phrase.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

WPA Personal/WPA2 Personal/WPA2 Person Mixed:，TKIP/AES/TKIP+AES，dynamic encryption keys. TKIP + AES, self-applicable TKIP or AES. WPA Person Mixed, allow WPA Personal and WPA2 Personal client mix.

WPA Shared Key：Between 8 and 63 ASCII character or hexadecimal digits.。

Key Renewal Interval（in seconds）：1-99999。



WPA Enterprise/WPA2 Enterprise/WPA2 Enterprise Mixed: WPA Enterprise uses an external RADIUS server to perform user authentication.

WPA Algorithms: AES/TKIP/TPIP+AES.

Radius Auth Sever Address：The IP address of the RADIUS server.

Radius Auth Server Port：The RADIUS Port (default is 1812)。

Radius Auth Shared Secret：The shared secret from the RADIUS server。

Key Renewal Interva(in seconds): 1-99999

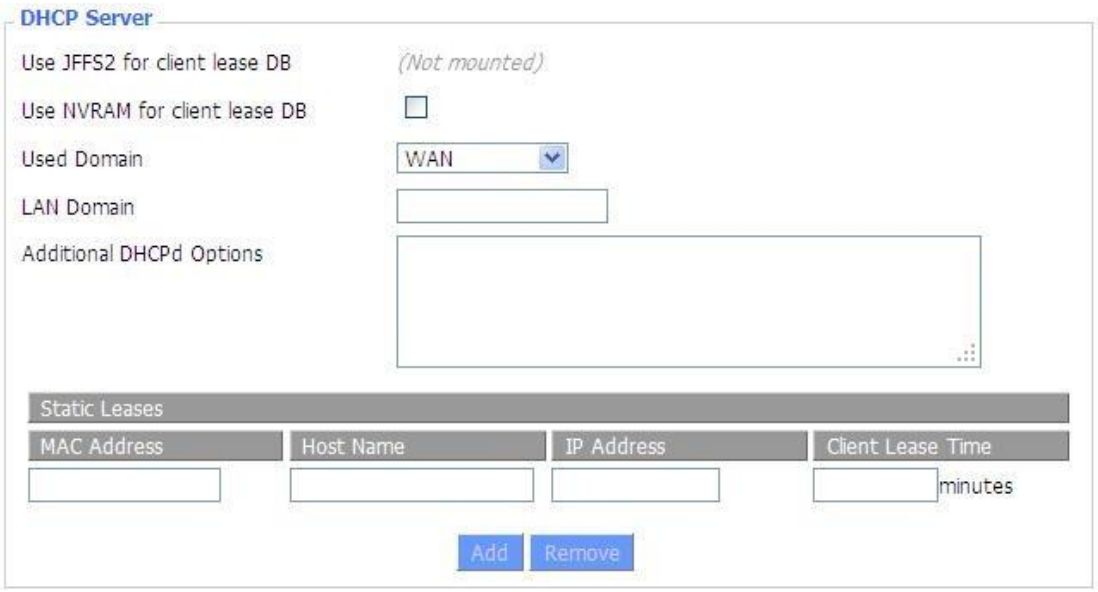
Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

3.3.3 Services

3.3.3.1 Services

DHCP Server

DHCP assigns IP addresses to users local devices. While the main configuration is on the setup page users can program some nifty special functions here.



Use NVRAM for client lease DB: users can store data to the system NVRAM area is enabled

Used domain: users can select here which domain the DHCP clients should get as their local domain. This can be the WAN domain set on the Setup screen or the LAN domain which can be set here.

LAN Domain: users can define here their local LAN domain which is used as local domain for DNSmasq and DHCP service if chose above.

Static Leases: if users want to assign certain hosts a specific address then they can

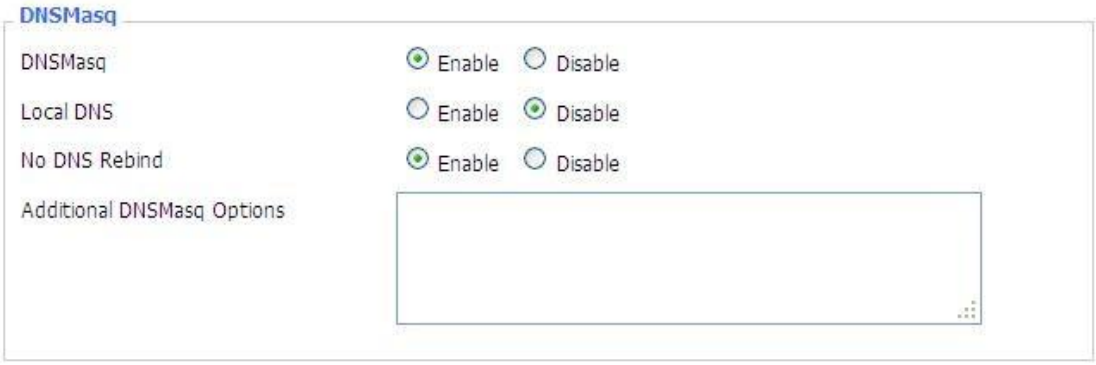
Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

define them here. This is also the way to add hosts with a fixed address to the Router's local DNS service (DNSmasq).

Additional DHCPd Options: some extra options users can set by entering them

DNSMasq

DNSmasq is a local DNS server. It will resolve all host names known to the Router from dhcp (dynamic and static) as well as forwarding and caching DNS entries from remote DNS servers. Local DNS enables DHCP clients on the LAN to resolve static and dynamic DHCP hostnames.



Local DNS: enables DHCP clients on the LAN to resolve static and dynamic DHCP hostnames

No DNS Rebind: when enabled, it can prevent an external attacker to access the Router's internal Web interface. It is a security measure

Additional DNSMasq Options: some extra options users can set by entering them in Additional DNS Options.

For example:

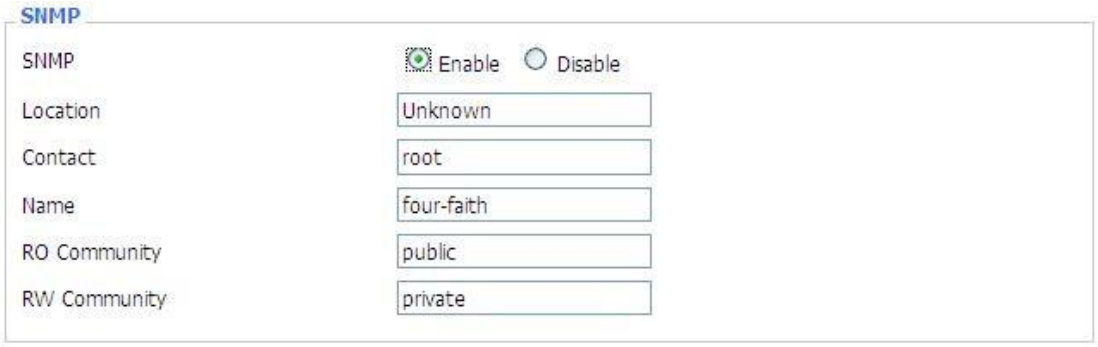
Static allocation: dhcp-host=AB:CD:EF:11:22:33,192.168.0.10,myhost,myhost.domain,12h

max lease number: dhcp-lease-max=2

DHCP server IP range: dhcp-range=192.168.0.110,192.168.0.111,12h

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

SNMP



Location: equipment location

Contact: contact this equipment management

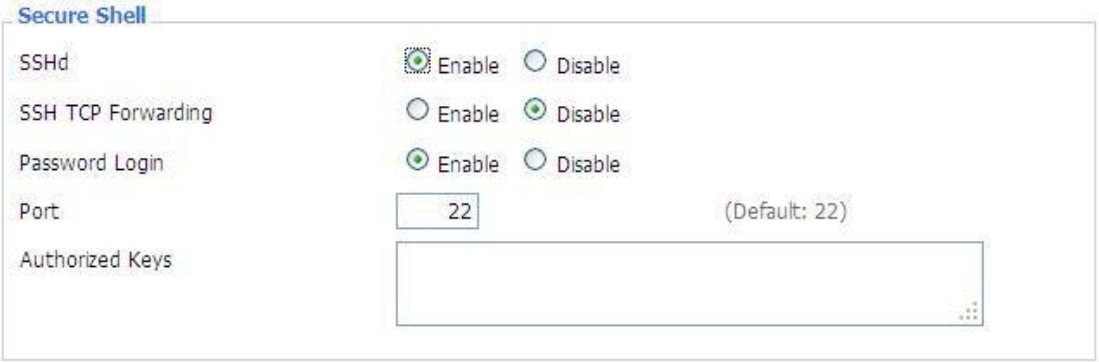
Name: device name

RO Community: SNMP RO community name, the default is public, Only to read.

RW Community: SNMP RW community name, the default is private, Read-write permissions

SSHD

Enabling SSHd allows users to access the Linux OS of their Router with an SSH client



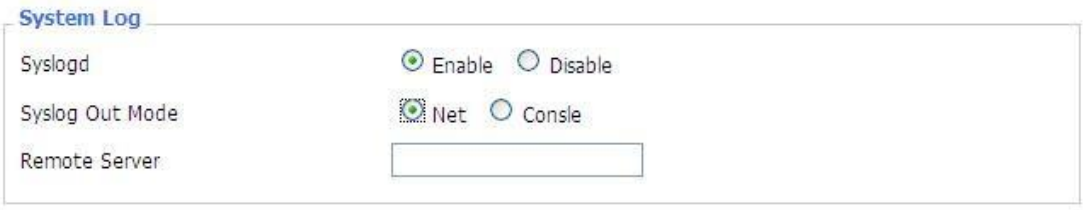
SSH TCP Forwarding: enable or disable to support the TCP forwarding **Password Login:** allows login with the Router password (username is admin) **Port:** port number for SSHd (default is 22)

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Authorized Keys: here users paste their public keys to enable key-based login (more secure than a simple password)

System log

Enable Syslogd to capture system messages. By default they will be collected in the local file /var/log/messages. To send them to another system, enter the IP address of a remote syslog server.



Syslog Out Mode: two log mode

Net: the log information output to a syslog server

Console: the log information output to console port

Remote Server: if choose net mode, users should input a syslog server's IP Address and run a syslog server program on it.

Telnet

Telnet: enable a telnet server to connect to the Router with telnet. The username is admin and the password is the Router's password.

Note: If users use the Router in an untrusted environment (for example as a public hotspot), it is strongly recommended to use SSHd and deactivate telnet.

WAN Traffic Counter

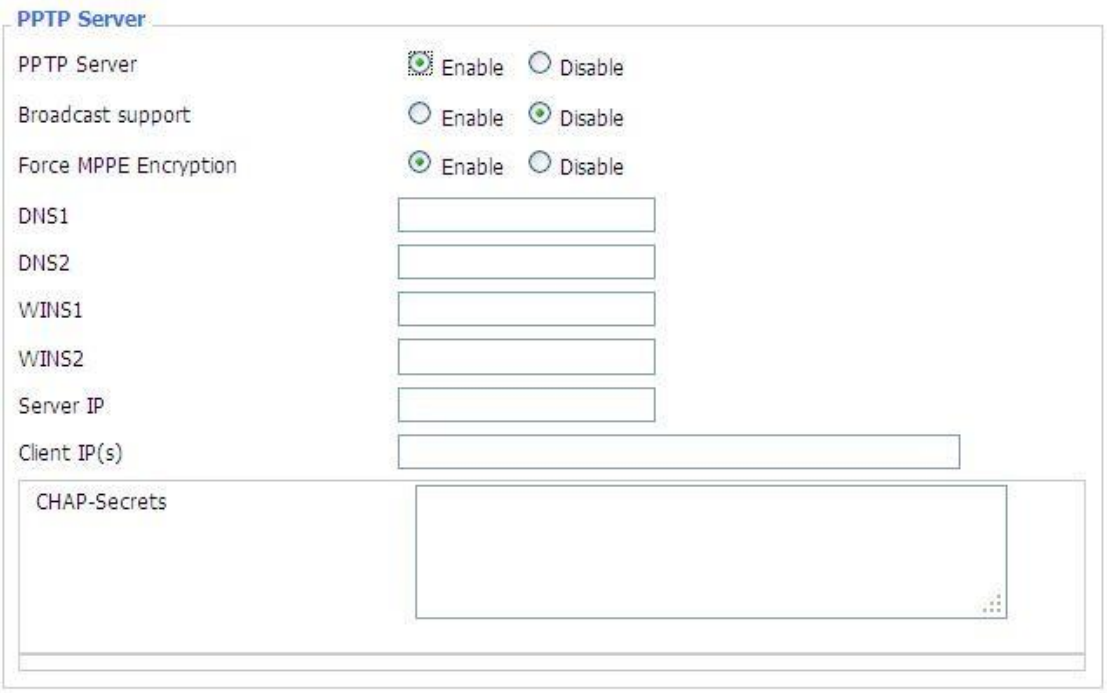
Ttraff Daemon: enable or disable wan traffic counter function

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

3.3.4 VPN

3.3.4.1 PPTP

PPTP Server



Broadcast support: enable or disable broadcast support of PPTP server

Force MPPE Encryption: enable of disable force MPPE encryption of PPTP data

DNS1/DNS2/WINS1/WINS2: set DNS1/DNS2/WINS1/WINS2

Server IP: input IP address of the Router as PPTP server, differ from LAN address

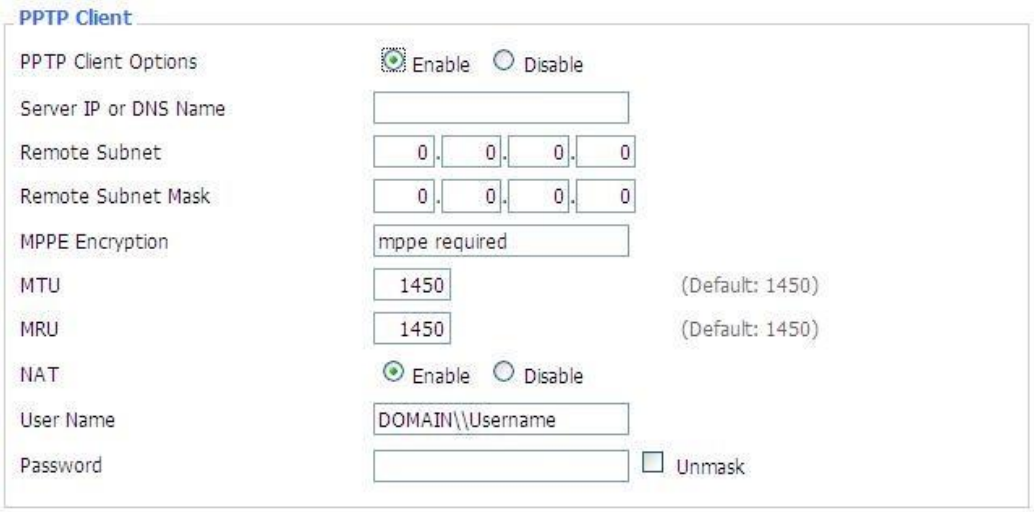
Client IP(s): IP address assigns to the client, the format is xxx.xxx.xxx.xxx-xxx

CHAP Secrets: user name and password of the client using PPTP service

Note: client IP must be different with IP assigned by Router DHCP. The format of CHAP Secrets is user * password *.

PPTP Client

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



Server IP or DNS Name: PPTP server's IP Address or DNS Name

Remote Subnet: the network of the remote PPTP server

Remote Subnet Mask: subnet mask of remote PPTP server

MPPE Encryption: enable or disable Microsoft Point-to-Point Encryption。

MTU: maximum Transmission Unit

MRU: maximum Receive Unit

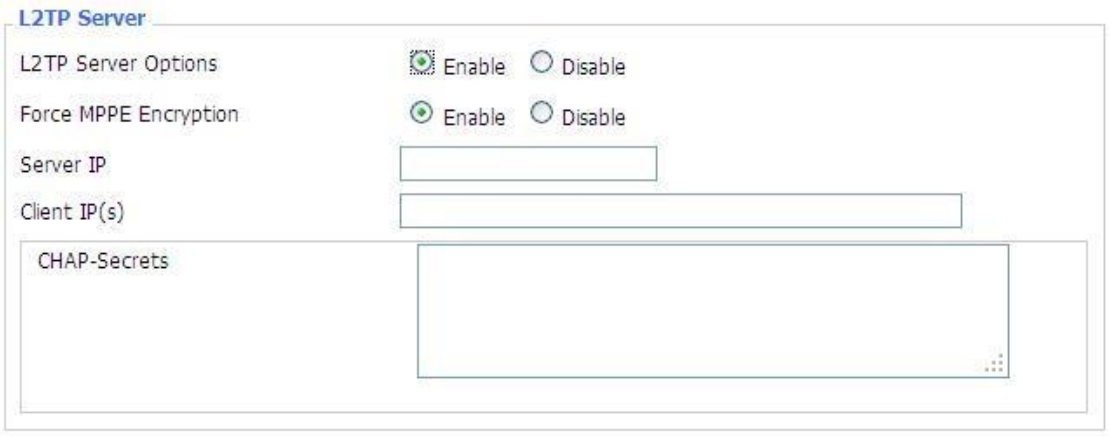
NAT: network Address Translation

User Name: user name to login PPTP Server.

Password: password to log into PPTP Server.

3.3.4.2 L2TP

L2TP Server



Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Force MPPE Encryption: enable or disable force MPPE encryption of L2TP data

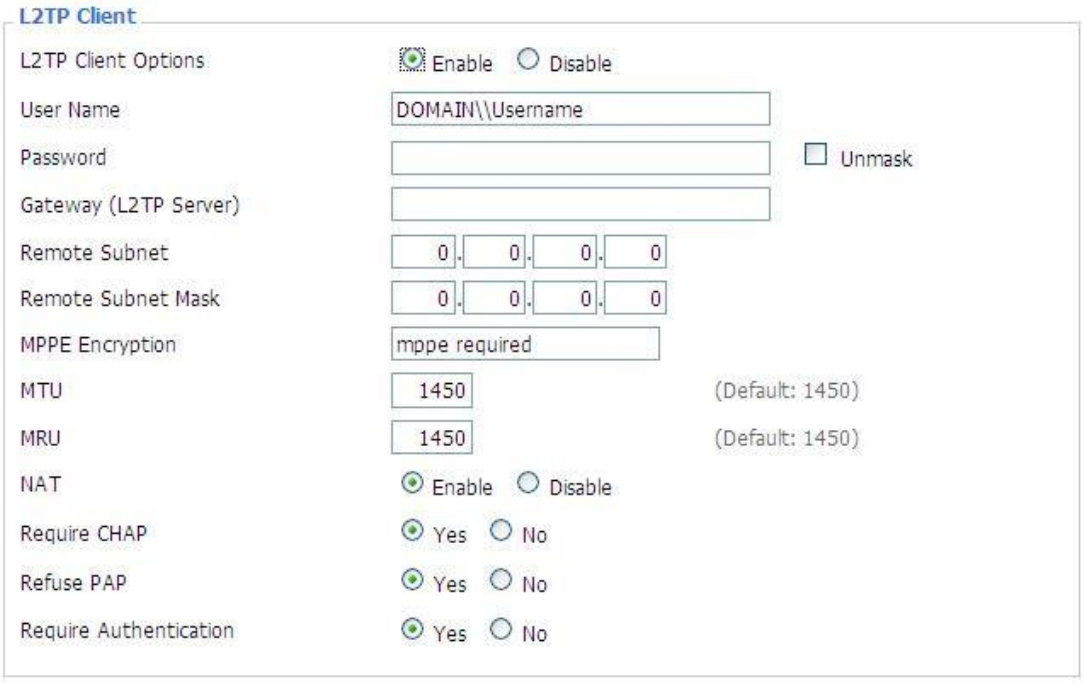
Server IP: input IP address of the Router as PPTP server, differ from LAN address

Client IP(s): IP addressassigns to the client, the format is xxx.xxx.xxx.xxx-xxx.xxx.xxx.xxx

CHAP Secrets: user name and password of the client using L2TP service

Note: client IP must be different with IP assigned by Router DHCP.

L2TP Client



Gateway(L2TP Server): L2TP server's IP Address or DNS Name

Remote Subnet: the network of remote PPTP server

Remote Subnet Mask: subnet mask of remote PPTP server

MPPE Encryption: enable or disable Microsoft Point-to-Point Encryption

MTU: maximum transmission unit

MRU: maximum receive unit

NAT: network address translation

User Name: user name to login L2TP Server

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Password: password to login L2TP Server

Require CHAP: enable or disable support chap authentication protocol

Refuse PAP: enable or disable refuse to support the pap authentication

Require Authentication: enable or disable support authentication protocol

3.3.4.3 OPENVPN

OPENVPN Server

Start Type: WAN UP----start after on-line, System----start when boot up

Config via: GUI----Page configuration, Config File----config File configuration

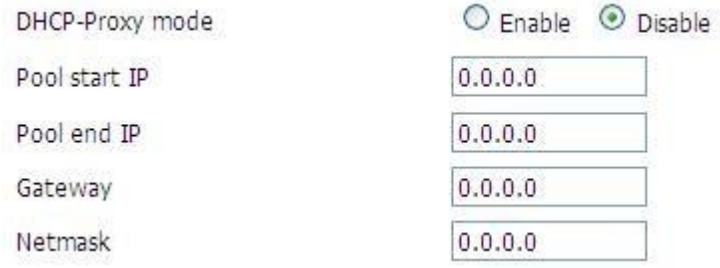
Server mode: Router (TUN)-route mode, Bridge (TAP)----bridge mode

Router (TUN):

Network: network address allowed by OPENVPN server

Netmask: netmask allowed by OPENVPN server

Bridge (TAP):



Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

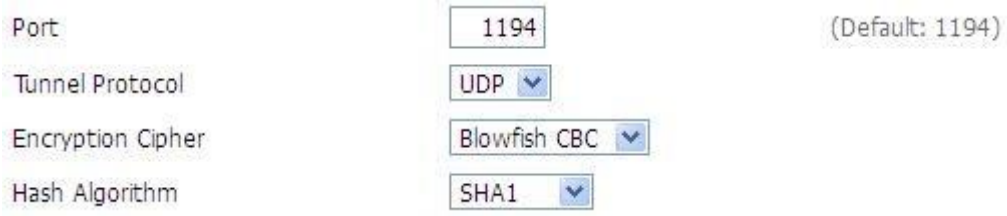
DHCP-Proxy mode: enable or disable DHCP-Proxy mode

Pool start IP: pool start IP of the client allowed by OPENVPN server

Pool end IP: pool end IP of the client allowed by OPENVPN server

Gateway: the gateway of the client allowed by OPENVPN server

Netmask: netmask of the client allowed by OPENVPN server



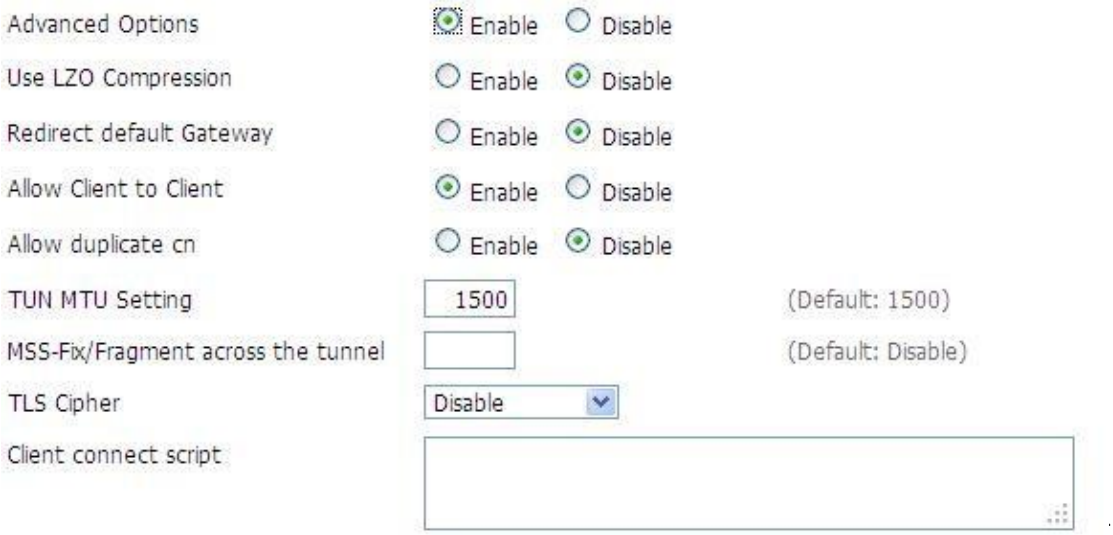
Port: listen port of OPENVPN server

Tunnel Protocol: UCP or TCP of OPENVPN tunnel protocol

Encryption Cipher: Blowfish CBC， AES-128 CBC， AES-192 CBC， AES-256 CBC，AES-512 CBC

Hash Algorithm: Hash algorithm provides a method of quick access to data, including SHA1，SHA256，SHA512，MD5

Advanced Options



Use LZO Compression: enable or disable use LZO compression for data transfer

Redirect default Gateway: enable or disable redirect default gateway

Allow Client to Client: enable or disable allow client to client

Allow duplicate cn: enable or disable allow duplicate cn

TUN MTU Setting: set the value of TUN MTU

TCP MSS: MSS of TCP data

TLS Cipher: TLS (Transport Layer Security) encryption standard supports AES-128 SHA and AES-256 SHA

Client connect script: define some client script by user self

CA Cert: CA certificate

Public Server Cert: server certificate

Private Server Key: the key seted by the server

DH PEM: PEM of the server

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Additional Config: additional configurations of the server

CCD-Dir DEFAULT file: other file approaches

TLS Auth Key: authority key of Transport Layer Security

Certificate Revoke List: configure some revoke certificates

OPENVPN Client

Server IP/Name: IP address or domain name of OPENVPN server

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Port: listen port of OPENVPN client

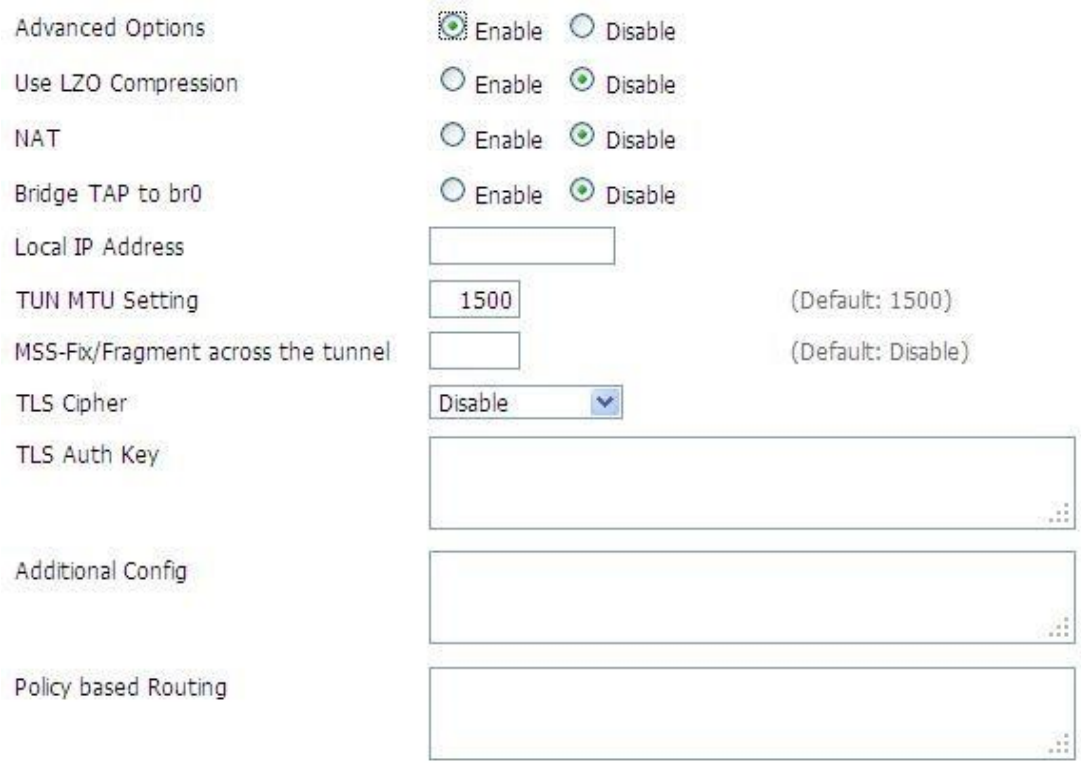
Tunnel Device: TUN----Router mode, TAP----Bridge mode

Tunnel Protocol: UDP and TCP protocol

Encryption Cipher: Blowfish CBC， AES-128 CBC， AES-192 CBC， AES-256 CBC，AES-512 CBC

Hash Algorithm: Hash algorithm provides a method of quick access to data, including SHA1, SHA256, SHA512, MD5

nsCertType verification: support ns certificate type



Use LZO Compression: enable or disable use LZO compression for data transfer

NAT: enable or disable NAT through function

Bridge TAP to br0: enable or disable bridge TAP to br0

Local IP Address: set IP address of local OPENVPN client

TUN MTU Setting: set MTU value of the tunnel

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

TCP MSS: mss of TCP data

TLS Cipher: TLS (Transport Layer Security) encryption standard supports AES-128 SHA and AES-256 SHA

TLS Auth Key: authority key of Transport Layer Security

Additional Config: additional configurations of OPENVPN server

Policy based Routing: input some defined routing policy

CA Cert: CA certificate

Public Client Cert: client certificate

Private Client Key: client key

3.3.4.4 IPSEC

Connect Status and Control

Show IPSEC connection and status of current Router on IPSEC page.

Name: the name of IPSEC connection

Type: The type and function of current IPSEC connection

Common name: local subnet, local address, opposite end address and opposite end subnet of current connection

Status: connection status: closed, negotiating, establish

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Closed: this connection does not launch a connection request to opposite end

Negotiating: this connection launch a request to opposite end, is under negotiating, the connection has not been established yet.

Establish: the connection has been established, enabled to use this tunnel

Action: the action of this connection, current is to delete, edit, reconnect and enable

Delete: to delete the connection, also will delete IPSEC if IPSEC has set up

Edit: to edit the configure information of this connection, reload this connection to make the configuration effect after edit

Reconnect: this action will remove current tunnel, and re-launch tunnel establish request

Enable: when the connection is enable, it will launch tunnel establish request when the system reboot or reconnect, otherwise the connection will not do it

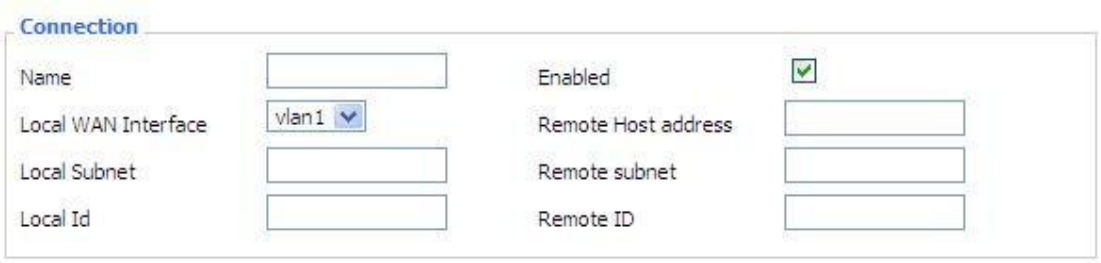
Add: to add a new IPSEC connection

Add IPSEC connection or edit IPSEC connection

Type: to choose IPSEC mode and relevant functions in this part, supports tunnel mode client, tunnel mode server and transfer mode currently

Connection: this part contains basic address information of the tunnel

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



Name: to indicate this connection name, must be unique

Enabled: If enable, the connection will send tunnel connection request when it is reboot or re-connection, otherwise it is no need if disable

Local WAN Interface: local address of the tunnel

Remote Host Address: IP/domain name of end opposite; this option can not fill in if using tunnel mode server

Local Subnet: IPSec local protects subnet and subnet mask, i.e. 192.168.1.0/24; this option can not fill in if using transfer mode

Remote Subnet: IPSec opposite end protects subnet and subnet mask, i.e. 192.168.7.0/24; this option can not fill in if using transfer mode

Local ID: tunnel local end identification, IP and domain name are available

Remote ID: tunnel opposite end identification, IP and domain name are available

Detection: this part contains configure information of connection detection

Enable DPD Detection: enable or disable this function, tick means enable

Time Interval: set time interval of connect detection (DPD)

Timeout: set the timeout of connect detection

Action: set the action of connect detection

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Advanced Settings: this part contains relevant setting of IKE, ESP, negotiation mode, etc.

Enable Advanced Settings: enable to configure 1st and 2nd phase information, otherwise it will automic negotiation according to opposite end

IKE Encryption: IKE phased encryption mode

IKE Integrity: IKE phased integrity solution

IKE Grouptype: DH exchange algorithm

IKE Lifetime: set IKE lifetime, current unit is hour, the default is 0

ESP Encryption: ESP encryption type

ESP Integrity: ESP integrity solution

ESP Keylife: set ESP keylife, current unit is hour, the default is 0

IKE aggressive mode allowed: negotiation mode adopt aggressive mode if tick; it is main mode if non-tick

Negotiate payload compression: Tick to enable PFS, non-tick to disable PFS

Authentication: choose use share encryption option or certificate authentication option. Current is only to choose use share encryption option.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

3.3.4.5 GRE

GRE (Generic Routing Encapsulation, Generic Routing Encapsulation) protocol is a network layer protocol (such as IP and IPX) data packets are encapsulated, so these encapsulated data packets to another network layer protocol (IP)transmission. GRE Tunnel (tunnel) technology, Layer Two Tunneling Protocol VPN (Virtual Private Network).

GRE Tunnel: enable or disable GRE function

Number：Switch on/off GRE tunnel app

Status：Switch on/off someone GRE tunnel app

Name：GRE tunnel name

Through：The GRE packet transmit interface

Peer Wan IP Addr：The remote WAN address

Peer Subnet：The remote gateway local subnet, eg: 192.168.1.0/24

Peer Tunnel IP：The remote tunnel ip address

Local Tunnel IP：The local tunnel ip address

Local Netmask：Netmask of local network

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Keepalive：Enable or disable GRE Keepalive function

Retry times：GRE keepalive detect fail retries

Interval：The time interval of GRE keepalive packet sent

Fail Action：The action would be exec after keeping alive failed.

Click on "**View GRE tunnels**" keys can view the information of GRE

3.3.5 Security

3.3.5.1 Firewall

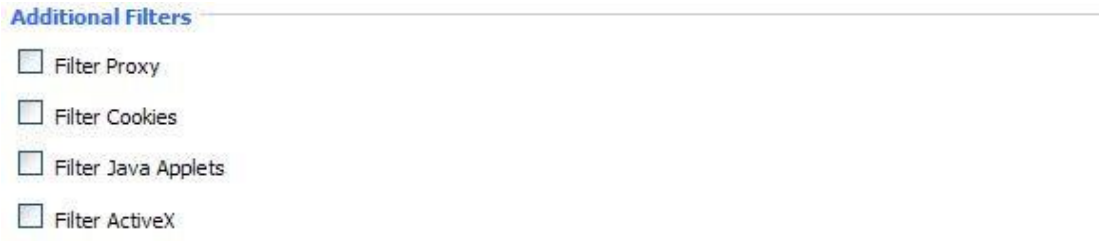
You can enable or disable the firewall, filter specific Internet data types,and prevent anonymous Internet requests,ultimately enhance network security.

Firewall Protection

Firewall enhance network security and use SPI to check the packets into the network.To use firewall protection, choose to enable otherwise disabled. Only enable the SPI firewall, you can use other firewall functions: filtering proxy, block WAN requests, etc.

Additional Filters

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



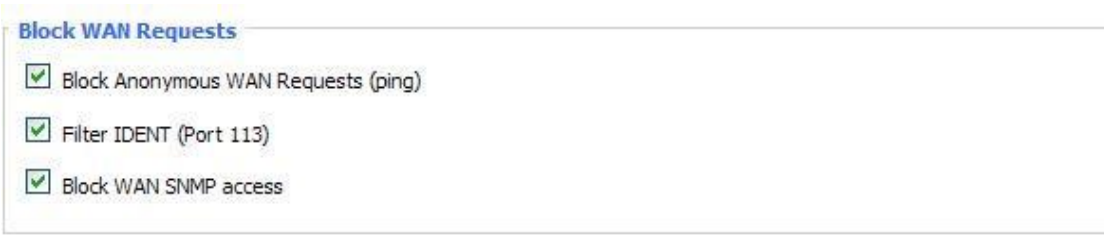
Filter Proxy: Wan proxy server may reduce the security of the gateway, Filtering Proxy will refuse any access to any wan proxy server. Click the check box to enable the function otherwise disabled.

Filter Cookies: Cookies are the website of data the data stored on your computer. When you interact with the site, the cookies will be used. Click the check box to enable the function otherwise disabled.

Filter Java Applets: If refuse to Java, you may not be able to open web pages using the Java programming. Click the check box to enable the function otherwise disabled.

Filter ActiveX: If refuse to ActiveX, you may not be able to open web pages using the ActiveX programming. Click the check box to enable the function otherwise disabled.

Prevent WAN Request



Block Anonymous WAN Requests (ping): By selecting “Block Anonymous WAN Requests (ping)” box to enable this feature, you can prevent your network from the Ping or detection of other Internet users. so that make More difficult to break into your network. The default state of this feature is enabled, choose to disable allow anonymous Internet requests.

Filter IDENT (Port 113): Enable this feature can prevent port 113 from being scanned from outside. Click the check box to enable the function otherwise disabled.

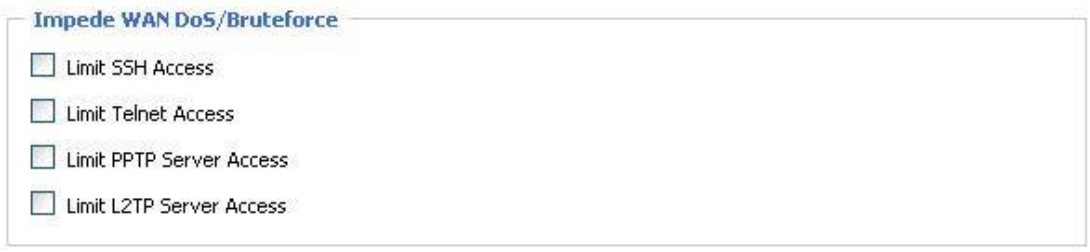
Block WAN SNMP access: This feature prevents the SNMP connection requests from

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

the WAN.

After Complete the changes, click the **Save Settings** button to save your changes. Click the **Cancel Changes** button to cancel unsaved changes.

Impede WAN DoS/Bruteforce



Limit ssh Access: This feature limits the access request from the WAN by ssh, and per minute up to accept two connection requests on the same IP. Any new access request will be automatically dropped.

Limit Telnet Access: This feature limits the access request from the WAN by Telnet, and per minute up to accept two connection requests on the same IP. Any new access request will be automatically dropped.

Limit PPTP Server Access: When build a PPTP Server in the Router, this feature limits the access request from the WAN by ssh, and per minute up to accept two connection requests on the same IP . Any new access request will be automatically dropped.

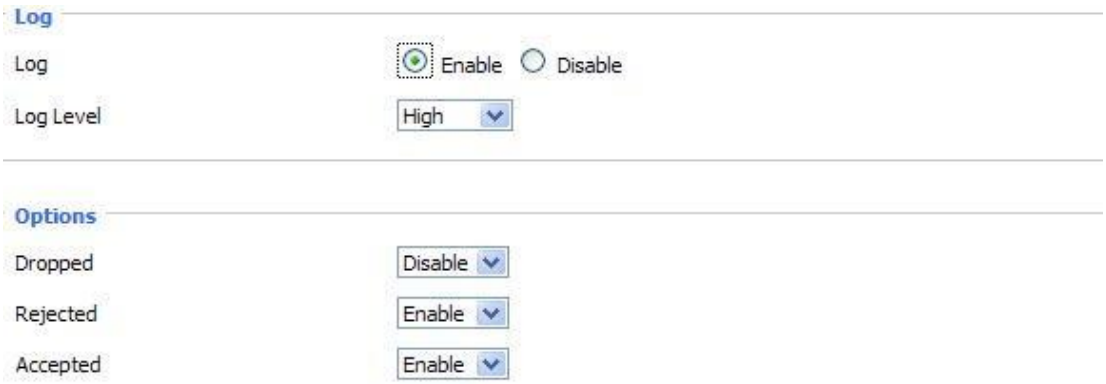
Limit L2TP Server Access: When build a L2TP Server in the Router, this feature limits the access request from the WAN by ssh, and per minute up to accept two connection requests on the same IP. Any new access request will be automatically dropped.

Log Management

The Router can keep logs of all incoming or outgoing traffic for your Internet connection.

Log: To keep activity logs, select Enable. To stop logging, select Disable. When select enable, the following page will appear.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

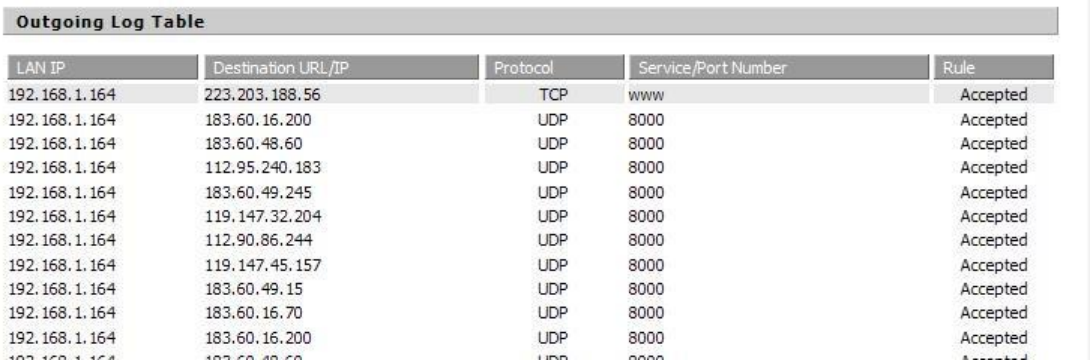


Log Level: Set this to the required log level. Set Log Level higher to log more actions.

Options: When select Enable, the corresponding connection will be recorded in the journal, the disabled are not recorded.

Incoming Log: To see a temporary log of the Router's most recent incoming traffic, click the Incoming Log button.

Outgoing Log: To see a temporary log of the Router's most recent outgoing traffic, click the Outgoing Log button.



Outgoing Log Table

LAN IP	Destination URL/IP	Protocol	Service/Port Number	Rule
192.168.1.164	223.203.188.56	TCP	www	Accepted

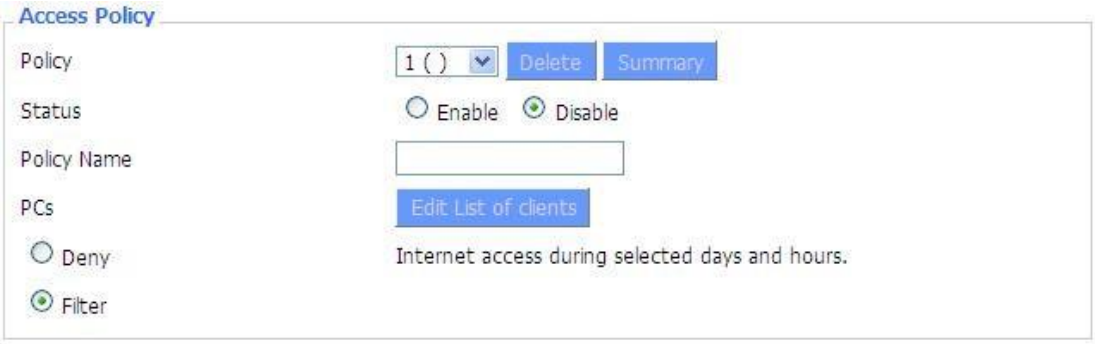
3.3.6 Access Restrictions

3.3.6.1 WAN Access

Use access restrictions, you can block or allow specific types of Internet applications. You can set specific PC-based Internet access policies. This feature allows you to customize up to ten different Internet Access Policies for particular PCs, which are identified by their IP or MAC addresses.



Two options in the default policy rules: "Filter" and "reject". If select "Deny", you will deny specific computers to access any Internet service at a particular time period. If you choose to "filter", It will block specific computers to access the specific sites at a specific time period. You can set up 10 Internet access policies filtering specific PCs access Internet services at a particular time period.

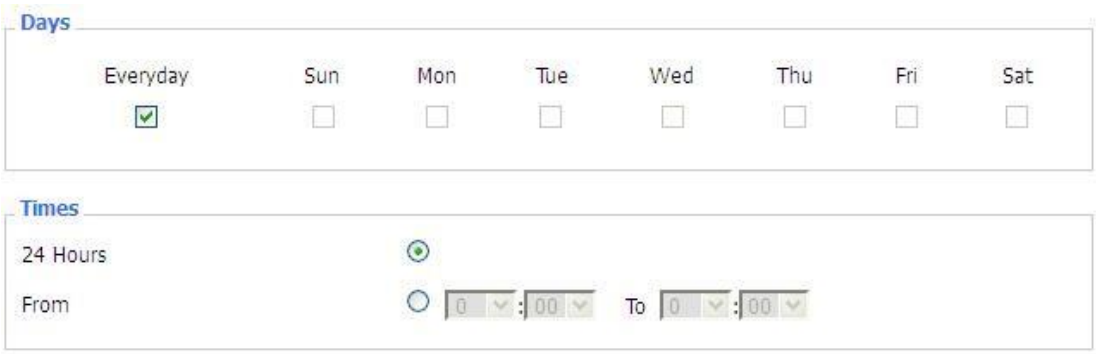
Access Policy: You may define up to 10 access policies. Click Delete to delete a policy or Summary to see a summary of the policy.

Status: Enable or disable a policy.

Policy Name: You may assign a name to your policy.

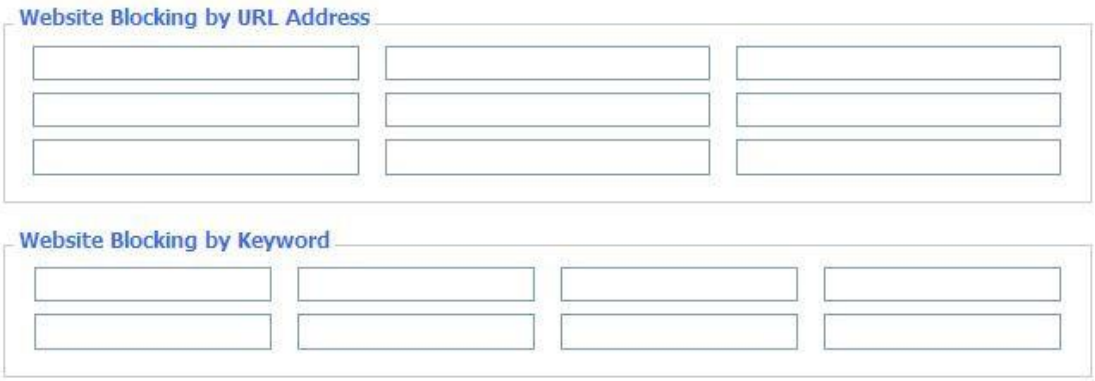
PCs: The part is used to edit client list, the strategy is only effective for the PC in the list.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



Days: Choose the day of the week you would like your policy to be applied.

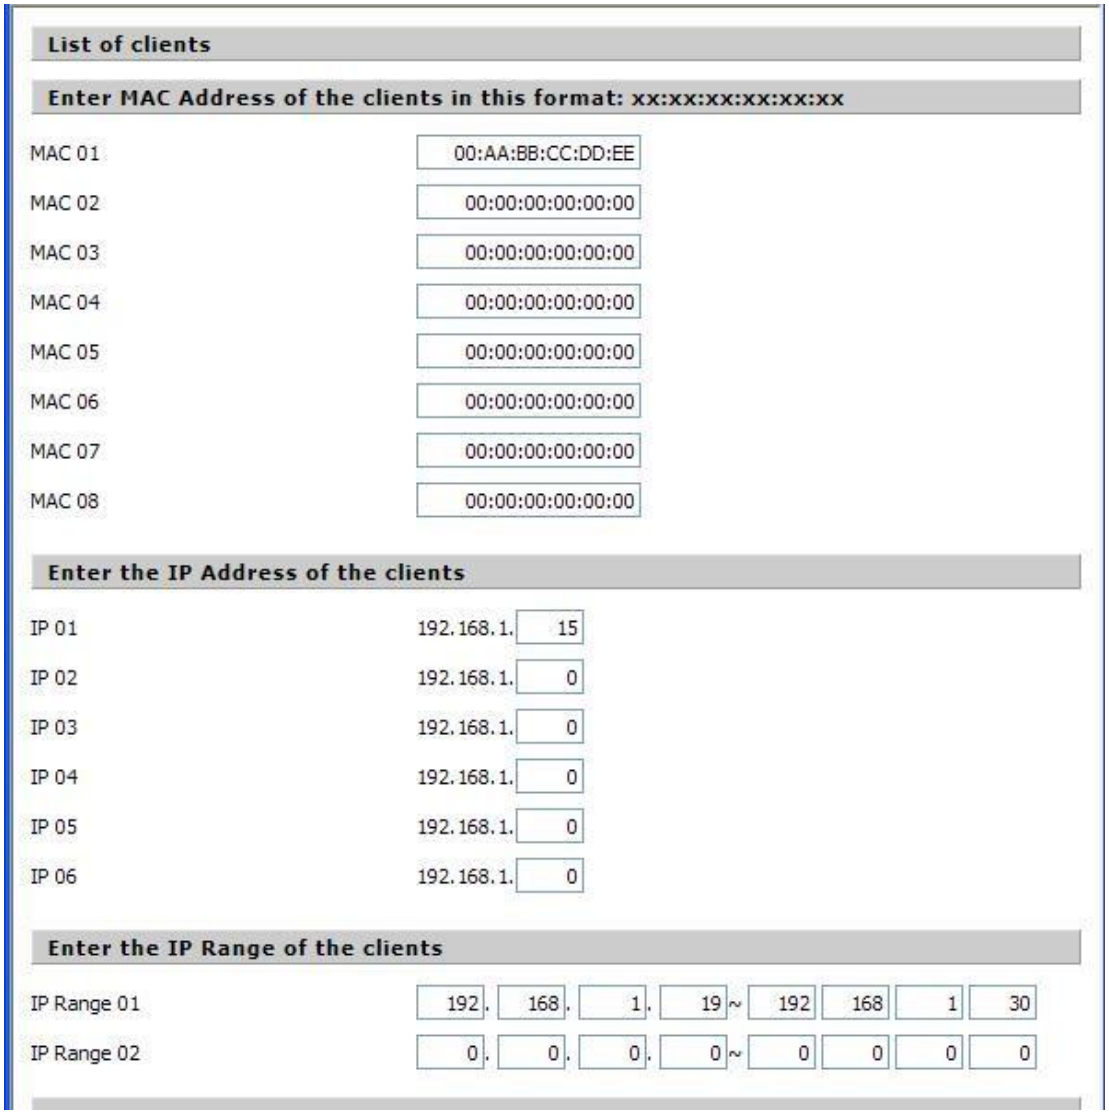
Times: Enter the time of the day you would like your policy to be applied.



Website Blocking by URL Address: You can block access to certain websites by entering their URL.

Website Blocking by Keyword: You can block access to certain website by the keywords contained in their webpage.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



set up Internet access policy

1. Select the policy number (1-10) in the drop-down menu.
2. For this policy is enabled, click the radio button next to "Enable"
3. Enter a name in the Policy Name field.
4. Click the Edit List of PCs button.
5. On the List of PCs screen, specify PCs by IP address or MAC address. Enter the appropriate IP addresses into the IP fields. If you have a range of IP addresses to filter, complete the appropriate IP Range fields. Enter the appropriate MAC addresses into the MAC fields.
6. Click the Apply button to save your changes. Click the Cancel button to cancel your

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

unsaved changes. Click the Close button to return to the Filters screen.

7. If you want to block the listed PCs from Internet access during the designated days and time, then keep the default setting, Deny. If you want the listed PCs to have Internet filtered during the designated days and time, then click the radio button next to Filter.
8. Set the days when access will be filtered. Select Everyday or the appropriate days of the week.
9. Set the time when access will be filtered. Select 24 Hours, or check the box next to from and use the drop-down boxes to designate a specific time period.
10. Click the Add to Policy button to save your changes and active it.
11. To create or edit additional policies, repeat steps 1-9.
12. To delete an Internet Access Policy, select the policy number, and click the Delete button.

Note:

1）The default factory value of policy rules is "filtered". If the user chooses the default policy rules for "refuse", and editing strategies to save or directly to save the settings. If the strategy edited is the first, it will be automatically saved into the second, if not the first, keep the original number.

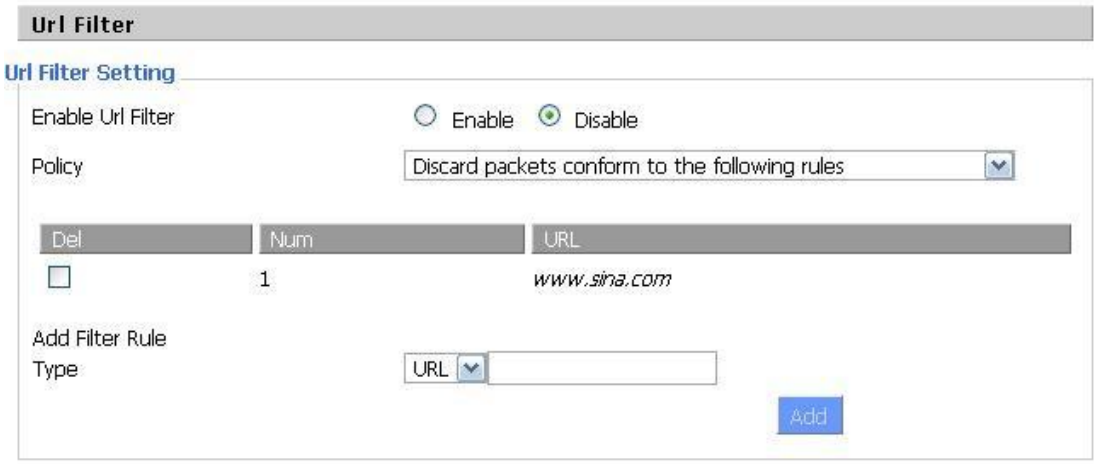
2）Turn off the power of the Router or reboot the Router can cause a temporary failure. After the failure of the Router, if can not automatically synchronized NTP time server, you need to recalibrate to ensure the correct implementation of the relevant period control function.

3.3.6.2 URL Filter

If you want to prevent certain client access to specific network domain name, such as www.sina.com. We can achieved it through the function of URL filter.

URL filtering function

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



Discard packets conform to the following rules: only discard the matching URL address in the list.

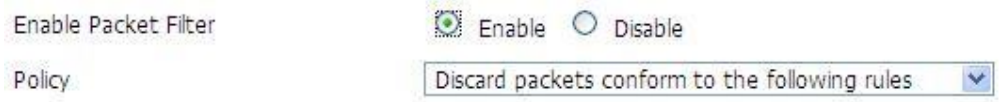
Accept only the data packets conform to the following rules: receive only with custom rules of network address, discarded all other URL address.

3.3.6.3 Packet Filter

To block some packets getting Internet access or block some Internet packets getting local network access, you can configure filter items to block these packets.

Packet Filter

Packet filter function is realized based on IP address or port of packets.



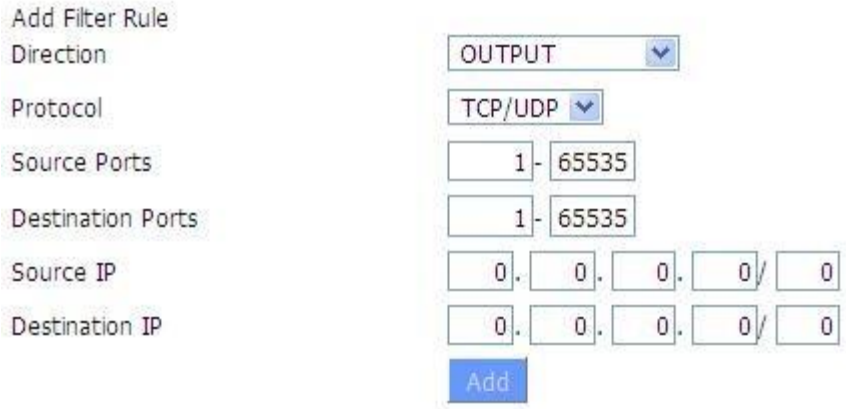
Enable Packet Filter: Enable or disable “packet filter” function

Policy: The filter rule’s policy, you can choose the following options

Discard the Following--Discard packets conform to the following rules, Accept all other packets

Only Accept the Following-- Accept only the data packets conform to the following rules, Discard all other packets

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



Direction

input: packet from WAN to LAN

output: packet from LAN to WAN

Protocol: packet protocol type

Source Ports: packet's source port

Destination Ports: packet's destination port

Source IP: packet's source IP address

Destination IP: packet's destination IP address

3.3.7 NAT

3.3.7.1 Port Forwarding

Port Forwarding allows you to set up public services on your network, such as web servers, ftp servers, e-mail servers, or other specialized Internet applications. Specialized Internet applications are any applications that use Internet access to perform functions such as videoconferencing or online gaming. When users send this type of request to your network via the Internet, the Router will forward those requests to the appropriate PC.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Application: Enter the name of the application in the field provided.

Protocol: Chose the right protocol TCP, UDP or Both. Set this to what the application requires.

Source Net: Forward only if sender matches this ip/net (example 192.168.1.0/24).

Port from: Enter the number of the external port (the port number seen by users on the Internet).

IP Address: Enter the IP Address of the PC running the application.

Port to: Enter the number of the internal port (the port number used by the application).

Enable: Click the Enable checkbox to enable port forwarding for the application.

Check all values and click **Save Settings** to save your settings. Click the **Cancel changes** button to cancel your unsaved changes.

3.3.7.2 Port Range Forward

Port Range Forwarding allows you to set up public services on your network, such as web servers, ftp servers, e-mail servers, or other specialized Internet applications. Specialized Internet applications are any applications that use Internet access to perform functions such as videoconferencing or online gaming. When users send this type of request to your network via the Internet, the Router will forward those requests to the appropriate PC.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Application: Enter the name of the application in the field provided.

Start: Enter the number of the first port of the range you want to seen by users on the Internet and forwarded to your PC.

End: Enter the number of the last port of the range you want to seen by users on the Internet and forwarded to your PC.

Protocol: Chose the right protocol TCP,UDP or Both. Set this to what the application requires.

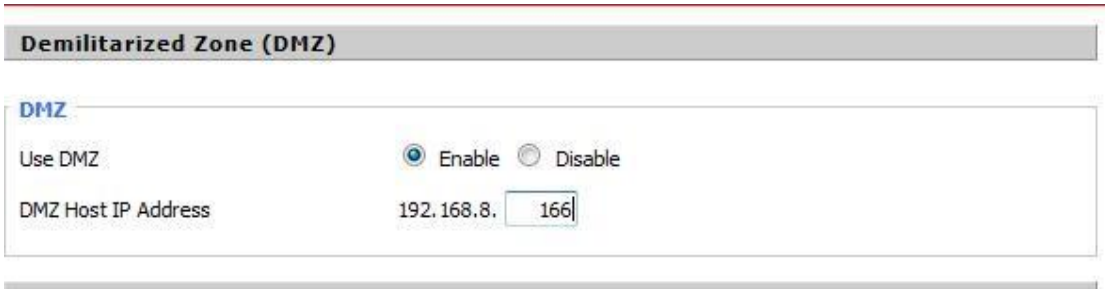
IP Address: Enter the IP Address of the PC running the application.

Enable: Click the Enable checkbox to enable port forwarding for the application.

Check all values and click **Save Settings** to save your settings. Click the **Cancel changes** button to cancel your unsaved changes.

3.3.7.3 DMZ

The DMZ (De Militarized Zone) hosting feature allows one local user to be exposed to the Internet for use of a special-purpose service such as Internet gaming or videoconferencing. DMZ hosting forwards all the ports at the same time to one PC. The Port Forwarding feature is more secure because it only opens the ports you want to have opened, while DMZ hosting opens all the ports of one computer, exposing the computer so the Internet can see it.



Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Any PC whose port is being forwarded must should have a new static IP address assigned to it because its IP address may change when using the DHCP function.

DMZ Host IP Address: To expose one PC to the Internet, select Enable and enter the computer's IP address in the DMZ Host IP Address field. To disable the DMZ, keep the

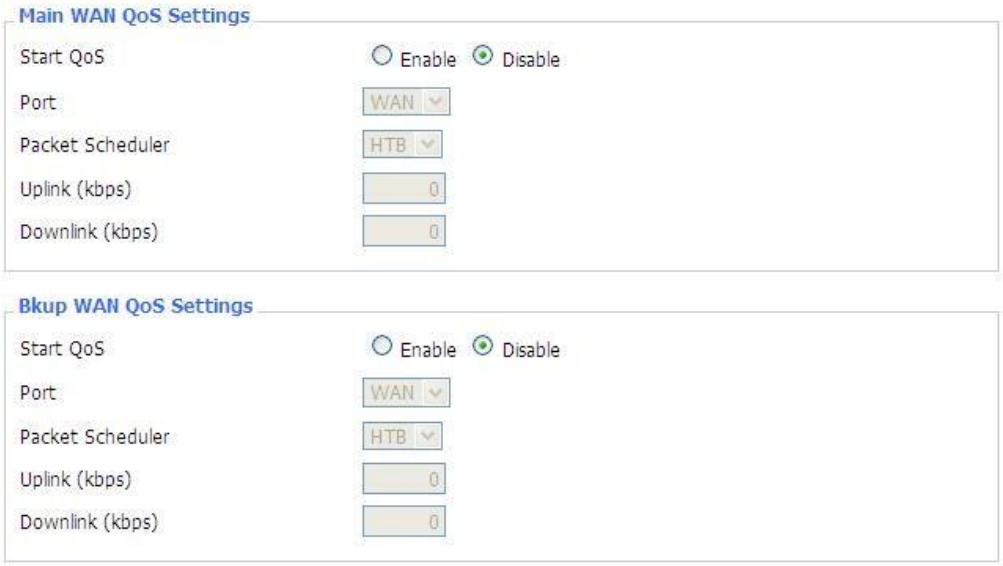
default setting：Disable

Check all values and click **Save Settings** to save your settings. Click the **Cancel changes** button to cancel your unsaved changes.

3.3.8 QoS Setting

3.3.8.1 Basic

QoS allows control of the bandwidth allocation to different services, netmasks, MAC addresses and the four LAN ports.



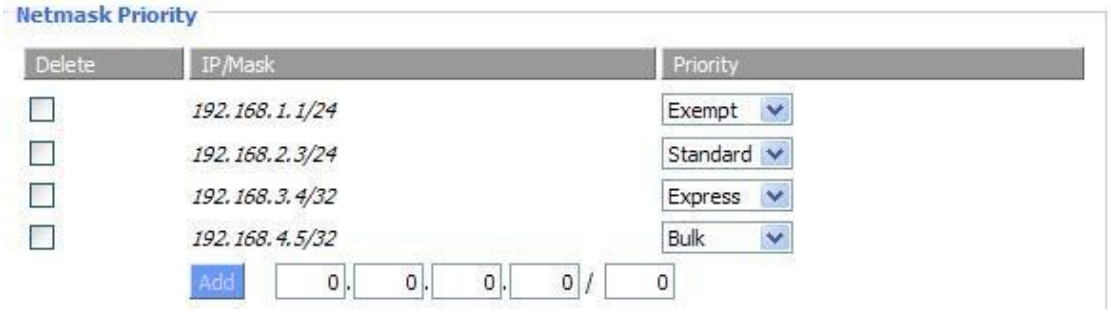
Uplink (kbps)：In order to use bandwidth management (QOS) you must enter bandwidth values for your uplink. These are generally 80% to 90% of your maximum bandwidth.

Downlink (kbps)：In order to use bandwidth management (QOS) you must enter bandwidth values for your downlink. These are generally 80% to 90% of your maximum bandwidth.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

3.3.8.2 Classify

Netmask Priority



You may specify priority for all traffic from a given IP address or IP Range.

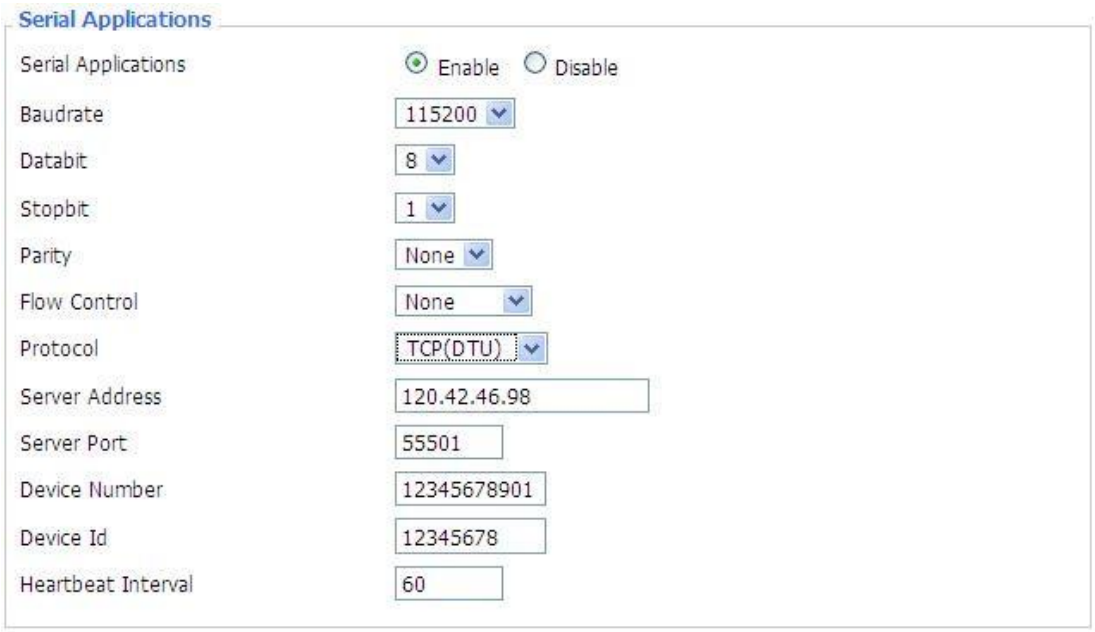
Check all values and click **Save Settings** to save your settings. Click the **Cancel changes** button to cancel your unsaved changes.

3.3.9 Applications

3.3.9.1 Serial Application

This is for the console port on Router. Normally, this port is used to debug the Router. This port can also be used as a serial port. The Router has embedded a serial to TCP program. The data sent to the serial port is encapsulated by TCP/IP protocol stack and then is sent to the destination server. This function can work as a DTU (Data Terminal Unit).

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



Baudrate: Baud rate indicates the number of bytes per second transported by device, commonly used baud rate is115200, 57600, 38400, 19200.

Databit: the data bits can be 4, 5, 6, 7, 8, constitute a character. The ASCII code is usually used. Starting from the most significant bit is transmitted.

Stopbit: it marks the end of a character data. It is a high level of 1, 1.5, 2.

Parity: use a set of data to check the data error

Flow control: including the hardware part and software part in two ways.

Enable Serial TCP Function: Enable the serial to TCP function

Protocol Type: The protocol type to transmit data.

UDP(DTU) – Data transmit with UDP protocol, work as a Four-Faith IP MODEM device which has application protocol and hear beat mechanism.

Pure UDP – Data transmit with standard UDP protocol.

TCP(DTU) -- Data transmit with TCP protocol, work as a Four-Faith P MODEM device which has application protocol and hear beat mechanism.

Pure TCP -- Data transmit with standard TCP protocol, Router is the client.

TCP Server -- Data transmit with standard TCP protocol, Router is the server.

TCST -- Data transmit with TCP protocol, Using a custom data

Modbus TCP -- Data transmit with Modbus TCP protocol

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Server Address: The data service center's IP Address or domain name.

Server Port: The data service center's listening port.

Device ID: The Router's identity ID.

Device Number: The Router's phone number.

Heartbeat Interval: The time interval to send heart beat packet. This item is valid only when you choose UDP(DTU) or TCP(DTU) protocol type.

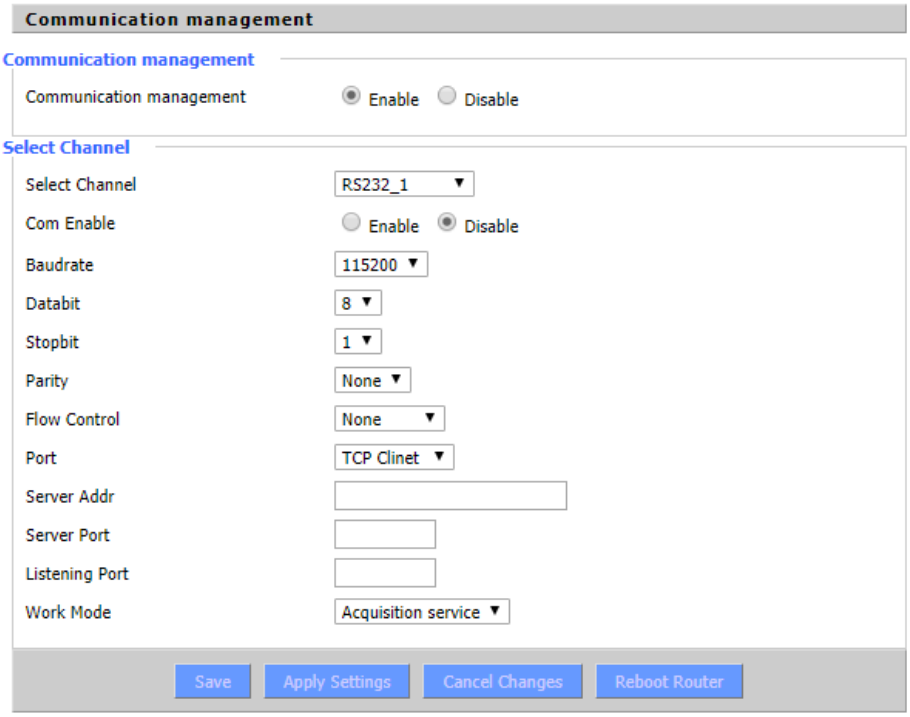
TCP Server Listen Port: This item is valid when Protocol Type is "TCP Server"

Custom Heartbeat Packet: This item is valid when Protocol Type is "TCST"

Custom Registration Packets: This item is valid when Protocol Type is "TCST"

3.3.9.2 Communication Gateway

On this page, you can choose which channel to communicate, and set each parameters.

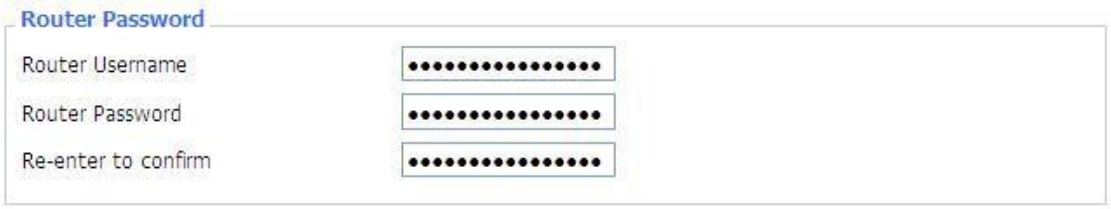


3.3.10 Administration

3.3.10.1 Management

The Management screen allows you to change the Router's settings. On this page you will find most of the configurable items of the Router code.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



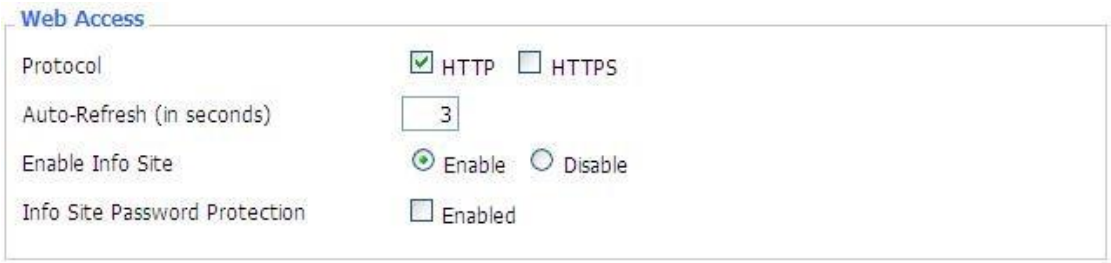
The new password must not exceed 32 characters in length and must not include any spaces. Enter the new password a second time to confirm it.

Note：Default username is admin.It is strongly recommended that you change the factory default password of the Router, which is admin. All users who try to access the Router's web-based utility or Setup Wizard will be prompted for the Router's password.

Web

Access

This feature allows you to manage the Router using either HTTP protocol or the HTTPS protocol. If you choose to disable this feature, a manual reboot will be required. You can also activate or not the Router information web page. It's now possible to password protect this page (same username and password than above).

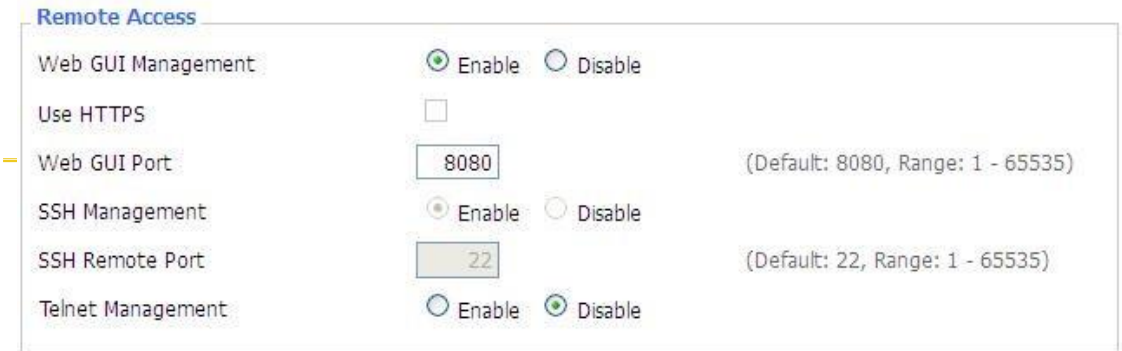


Protocol：This feature allows you to manage the Router using either HTTP protocol or the HTTPS protocol

Auto-Refresh： Adjusts the Web GUI automatic refresh interval. 0 disables this feature completely

Enable Info Site：Enable or disable the login system information page

Info Site Password Protection：Enable or disable the password protection feature of the system information page



Remote Access： This feature allows you to manage the Router from a remote location, via the Internet. To disable this feature, keep the default setting, Disable. To enable this

feature, select Enable, and use the specified port (default is 8080) on your PC to remotely manage the Router. You must also change the Router's default password to one of your own, if you haven't already.

To remotely manage the Router, enter http://xxx.xxx.xxx.xxx:8080 (the x's represent the Router's Internet IP address, and 8080 represents the specified port) in your web browser's address field. You will be asked for the Router's password.

If you use https you need to specify the url as https://xxx.xxx.xxx.xxx:8080 (not all firmwares does support this without rebuilding with SSL support).

SSH Management： You can also enable SSH to remotely access the Router by Secure Shell. Note that SSH daemon needs to be enable in Services page.

Note：

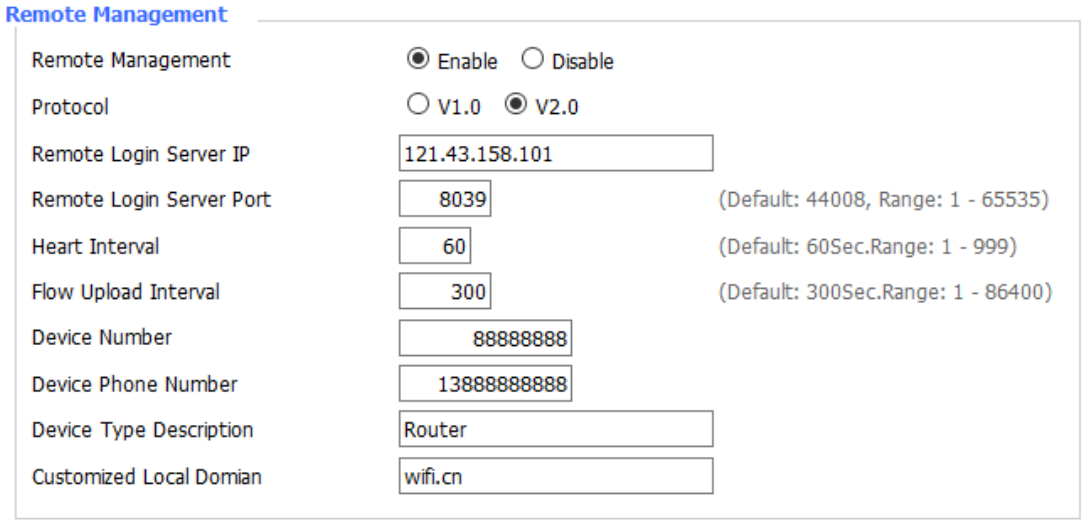
If the Remote Router Access feature is enabled, anyone who knows the Router's Internet IP address and password will be able to alter the Router's settings.

Telnet Management：Enable or disable remote Telnet function

Cron： The cron subsystem schedules execution of Linux commands. You'll need to use the command line or startup scripts to actually use this.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Language：Set up the Router page shows the type of language, including simplified Chinese and English.



Remote Upgrade: custom-developed remote management server for this station Router monitoring and management, configuration parameters, WIFI advertising updates.

Remote Management Login Server: In the case of more than one servers,the remote management login server is a general server.Connect the Router to this login server, the login server will assign an available server IP and port for the Router to connect for remote management.

Firmware Upgrade: custom-developed remote server for this station Router upgrading firmware.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

3.3.10.2 Keep Alive

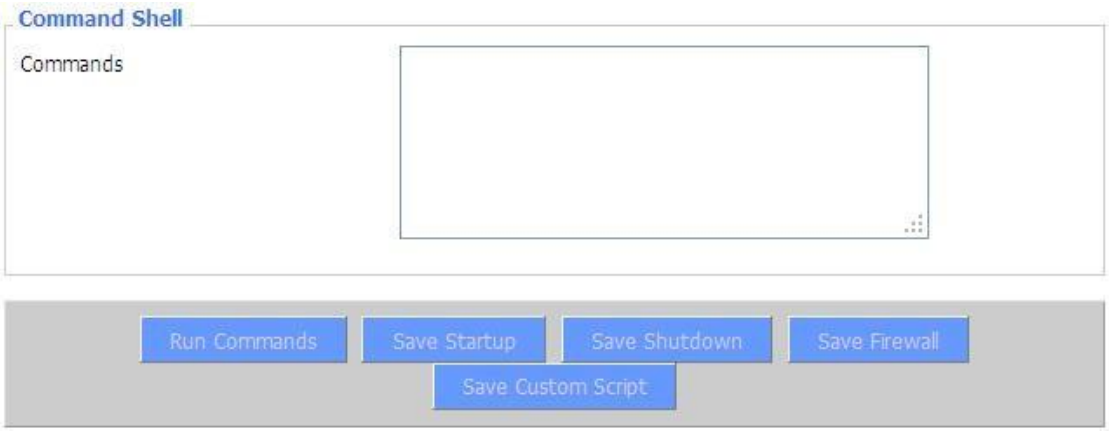
Schedule Reboot

You can schedule regular reboots for the Router: Regularly after xxx seconds. At a specific date time each week or everyday.

Note： For date based reboots Cron must be activated. See Management for Cron activation.

3.3.10.3 Commands

Commands： You are able to run command lines directly via the Webinterface.



Run Command： You can run command lines via the web interface. Fill the text area with your command and click Run Commands to submit.

Startup： You can save some command lines to be executed at startup's Router. Fill the text area with commands (only one command by row) and click Save Startup.

Shutdown： You can save some command lines to be executed at shutdown's Router. Fill the text area with commands (only one command by row) and click Save Shutdown.

Firewall： Each time the firewall is started, it can run some custom iptables instructions. Fill

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

the text area with firewall's instructions (only one command by row) and click Save Firewall.

Custom Script：Custom script is stored in /tmp/custom.sh file. You can run it manually or use cron to call it. Fill the text area with script's instructions (only one command by row) and click Save Custom Script.

3.3.10.4 Factory Defaults

Reset Router settings：Click the Yes button to reset all configuration settings to their default values. Then click the Apply Settings button.

Note：

Any settings you have saved will be lost when the default settings are restored. After restoring the Router is accessible under the default IP address 192.168.1.1 and the default password admin.

3.3.10.5 Firmware Upgrade

Firmware Upgrade：New firmware versions are posted at www..com and can be downloaded. If the Router is not experiencing difficulties, then there is no need to download a more recent firmware version, unless that version has a new feature that you want to use.

Note：

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

When you upgrade the Router's firmware, you lose its configuration settings, so make sure you write down the Router settings before you upgrade its firmware.

To upgrade the Router's firmware:

1. Download the firmware upgrade file from the website.

2. Click the Browse... button and chose the firmware upgrade file.

3. Click the Upgrade button and wait until the upgrade is finished.

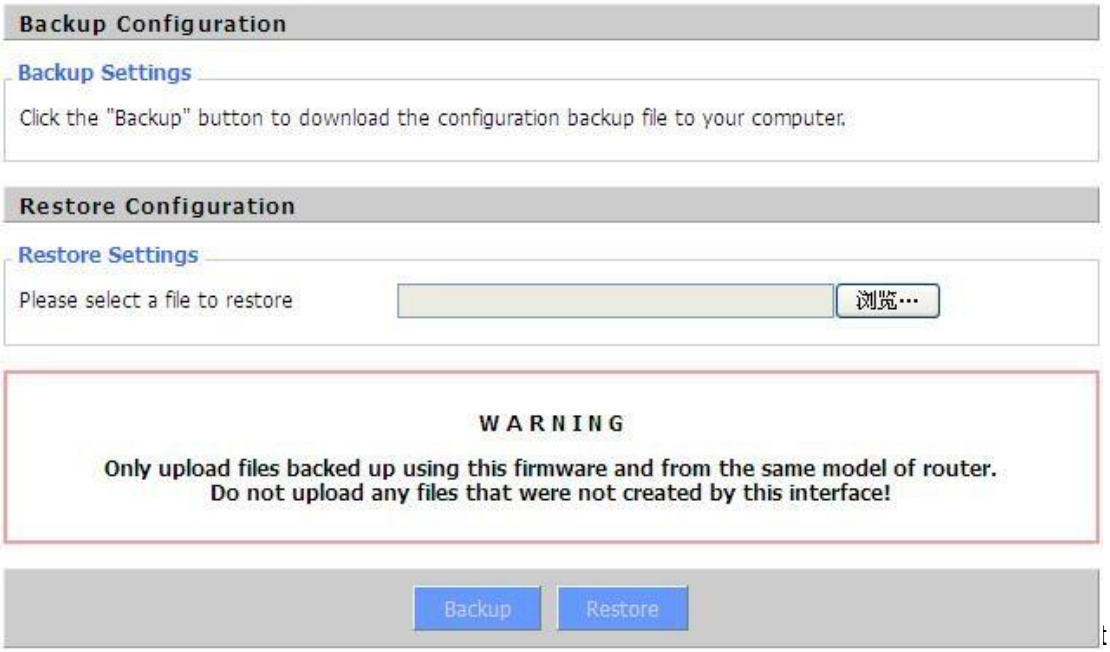
Note：

Upgrading firmware may take a few minutes.

Do not turn off the power or press the reset button!

After flashing, reset to： If you want to reset the Router to the default settings for the firmware version you are upgrading to, click the Firmware Defaults option.

3.3.10.6 Backup



the Router back to its factory default settings. Click the Backup button to backup your

current configuration.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

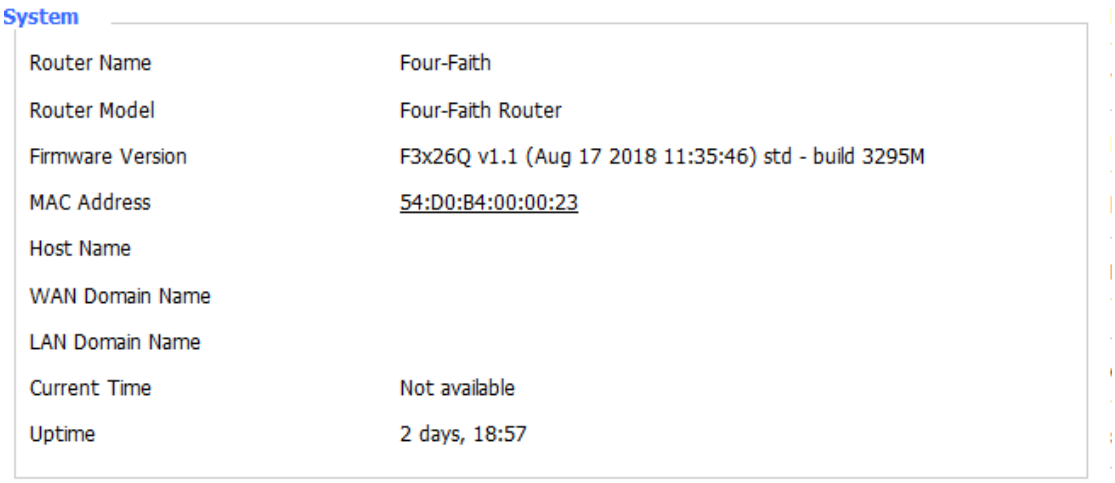
Restore Settings：Click the Browse... button to browse for a configuration file that is currently saved on your PC. Click the Restore button to overwrite all current configurations with the ones in the configuration file.

Note：

Only restore configurations with files backed up using the same firmware and the same model of Router.

3.3.11 Status

3.3.11.1 Router



Router Name: name of the Router

Router Model: model of the Router, unavailable to modify

Firmware Version: software version information

MAC Address: MAC address of WAN, setting - Clone MAC Address to modify

Host Name: host name of the Router, setting - basic setting to modify

WAN Domain Name: domain name of WAN, setting - basic setting to modify

LAN Domain Name: domain name of LAN, unavailable to modify

Current Time: local time of the system

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Uptime: operating uptime as long as the system is powered on

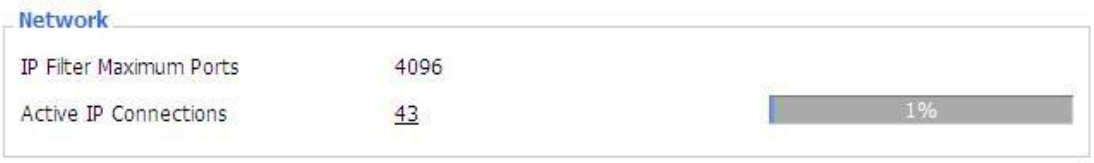
Total Available: the room for total available of RAM (that is physical memory minus some reserve and the kernel of binary code bytes)

Free: free memory, the Router will reboot if the memory is less than 500kB

Used: used memory, total available memory minus free memory

Buffers: used memory for buffers,

Cached: the memory used by high-speed cache memory **Active:** active use of buffer or cache memory page file size **Inactive**: not often used in a buffer or cache memory page file size



IP Filter Maximum Ports: preset is 4096, available to re-management

Active IP Connections: real time monitor active IP connections of the system, click to see the table as blow:

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

IP Address: IP address of Router WAN **Subnet Mask:** subnet mask of Router WAN

Gateway: the gateway of Router WAN

DNS1, DNS2, DNS3: DNS1/DNS2/DNS3 of Router WAN

Remaining Lease Time: remaining lease time of IP address in DHCP way

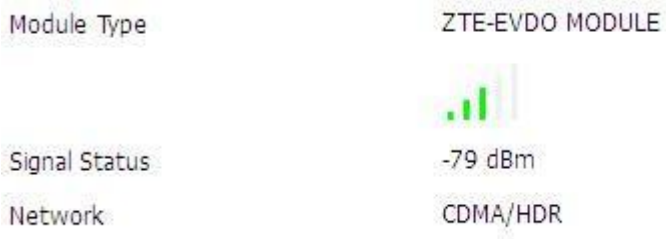
DHCP Release: release DHCP address

DHCP Renew: renew IP address in DHCP way, default is 1 day

Login Status: connection status of WAN

Disconnection: disconnect

Connection: connect



Module Type: module type in 3G/UMTS way

Signal Status: signal intensity of the module in 3G/UMTS way

Network: network type of the module in 3G/UMTS way

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Total Flow: flow from power-off last time until now statistics, download and upload direction

Monthly Flow: the flow of a month, unit is MB

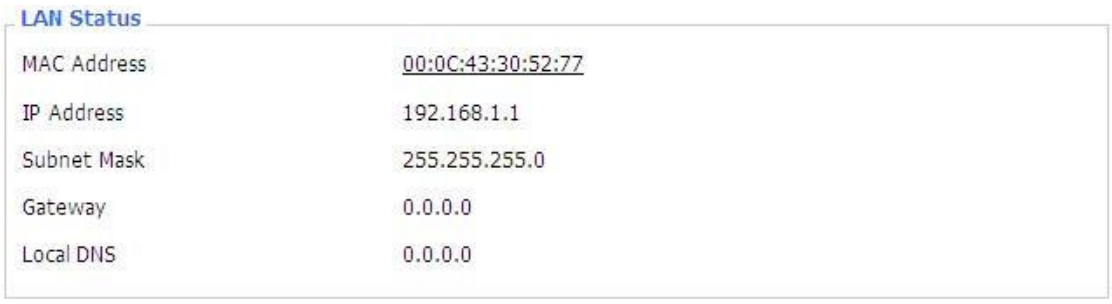
Last Month: the flow of last month

Next Month: the flow of next month

Backup: backup data administration **Restore:** restore data administration **Delete:** delete data administration

3.3.11.3 LAN

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



MAC Address: MAC Address of the LAN port ethernet

IP Address: IP Address of the LAN port

Subnet Mask: Subnet Mask of the LAN port

Gateway: Gateway of the LAN port

Local DNS: DNS of the LAN port

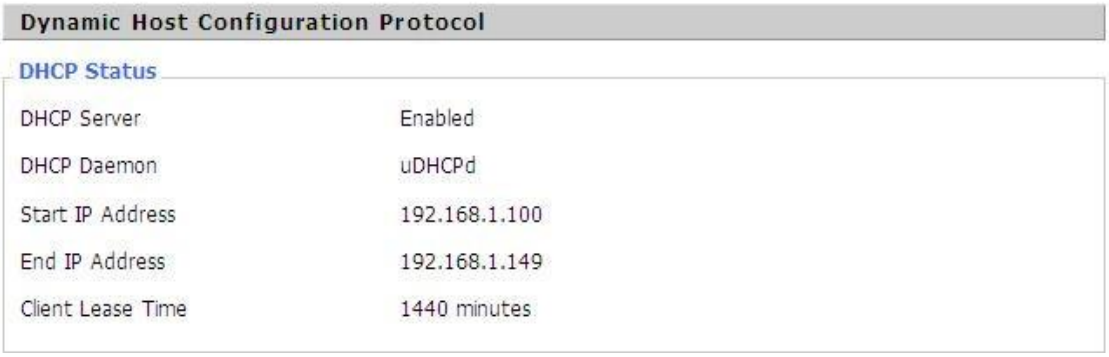
Host Name: host name of LAN client

IP Address: IP address of the client

MAC Address: MAC address of the client

Conn. Count: connection count caused by the client

Ratio: the ratio of 4096 connection



DNCP Server: enable or disable the Router work as a DHCP server

DHCP Daemon: the agreement allocated using DHCP including DNSMasq and uDHCPd

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Starting IP Address: the starting IP Address of the DHCP server's Address pool

Ending IP Address: the ending IP Address of the DHCP server's Address pool

Client Lease Time: the lease time of DHCP client

DHCP Clients

Host Name	IP Address	MAC Address	Client Lease Time	Delete
PC-201011161332	192.168.1.142	00:21:5C:33:4D:29	1 day 00:00:00	
jack-lincw	192.168.1.117	44:37:E6:3F:45:54	1 day 00:00:00	
*	192.168.1.149	00:0C:E7:00:00:00	1 day 00:00:00	

IP Address: IP address of the client

MAC Address: MAC address of the client

Expires: the expiry the client rents the IP address

Delete: click to delete DHCP client

Connected PPPOE Clients

Interface	User Name	Local IP	Delete
ppp0	hometest	192.168.10.10	

Interface: the interface assigned by dial-up system

User Name: user name of PPPOE client

Local IP: IP address assigned by PPPOE client

Delete: click to delete PPPOE client

Connected L2TP Server

Interface	Local IP	Remote IP	Delete
ppp0	172.168.8.2	172.168.8.1	

Interface: the interface assigned by dial-up system

Local IP: tunnel IP address of local L2TP

Remote IP: tunnel IP address of L2TP server

Delete: click to disconnect L2TP

Connected L2TP Clients

Interface	User Name	Local IP	Remote IP	Delete
ppp1	hometest	192.168.50.2	120.42.46.98	

Interface: the interface assigned by dial-up system

User Name: user name of the client

Local IP: tunnel IP address of L2TP client

Remote IP: IP address of L2TP client

Delete: click to delete L2TP client

Interface: the interface assigned by dial-up system

Local IP: tunnel IP address of local PPTP

Remote IP: tunnel IP address of PPTP server

Delete: click to disconnect PPTP

Interface: the interface assigned by dial-up system

User Name: user name of the client

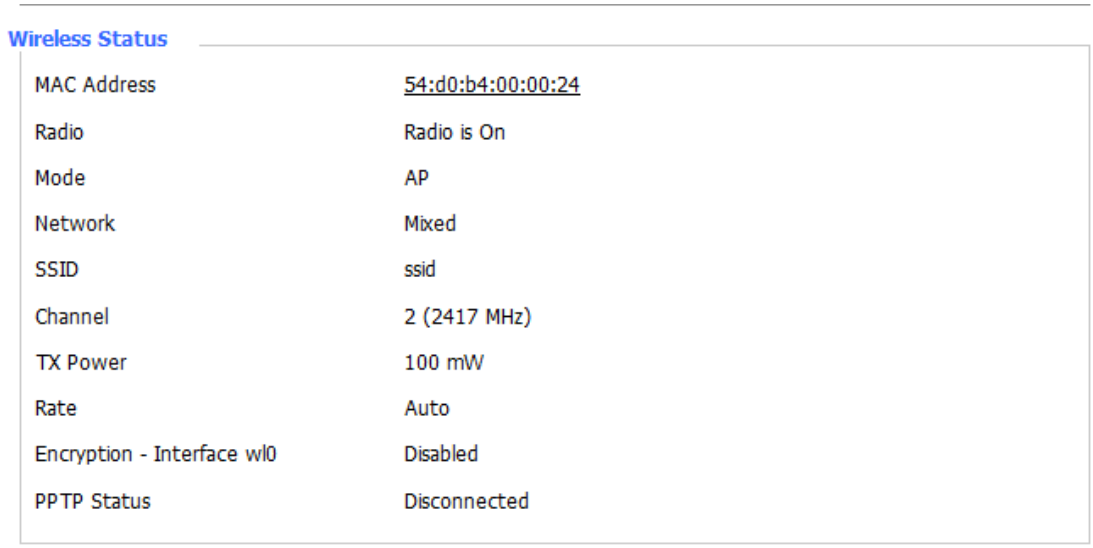
Local IP: tunnel IP address of PPTP client

Remote IP: IP address of PPTP client

Delete: click to delete PPTP client

3.3.11.4 Wireless

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



MAC Address: MAC address of wireless client

Radio: display whether radio is on or not

Mode: wireless mode

Network: wireless network mode

SSID: wireless network name

Channel: wireless network channel

TX Power: reflection power of wireless network

Rate: reflection rate of wireless network

Encryption-Interface wl0: enable or diasbal Encryption-Interface wl0

PPTP Status: show wireless pptp status

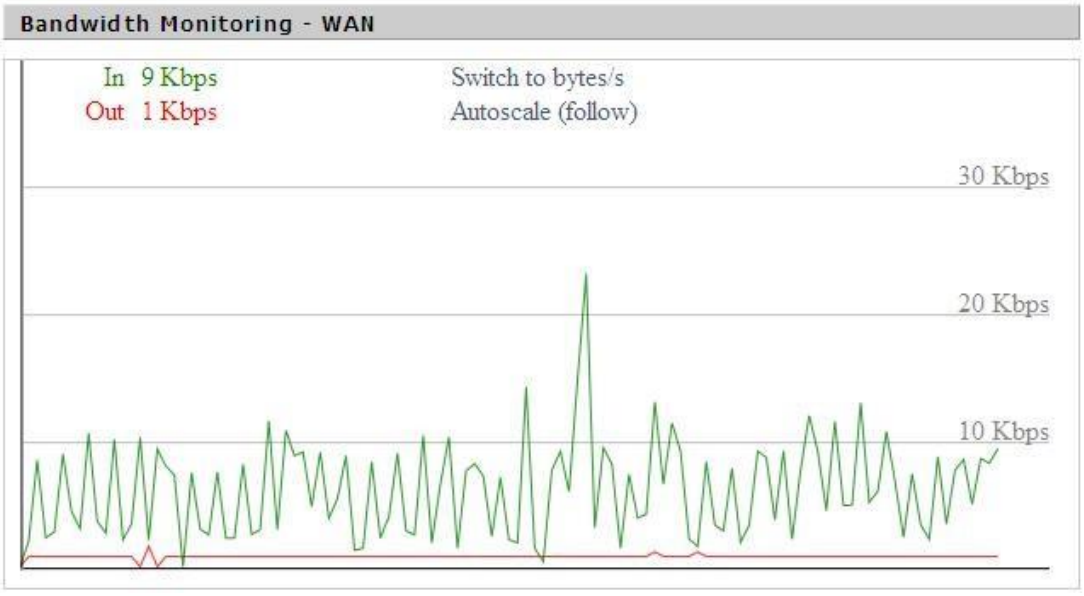
3.3.11.5 Bandwidth

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Bandwidth Monitoring-LAN Graph

abscissa axis: time

vertical axis: speed rate



Bandwidth Monitoring-WAN Graph

abscissa axis: time

vertical axis: speed rate

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

3.3.11.6 System-Info

Router Name: the name of the Router

Router Model: the model of the Router

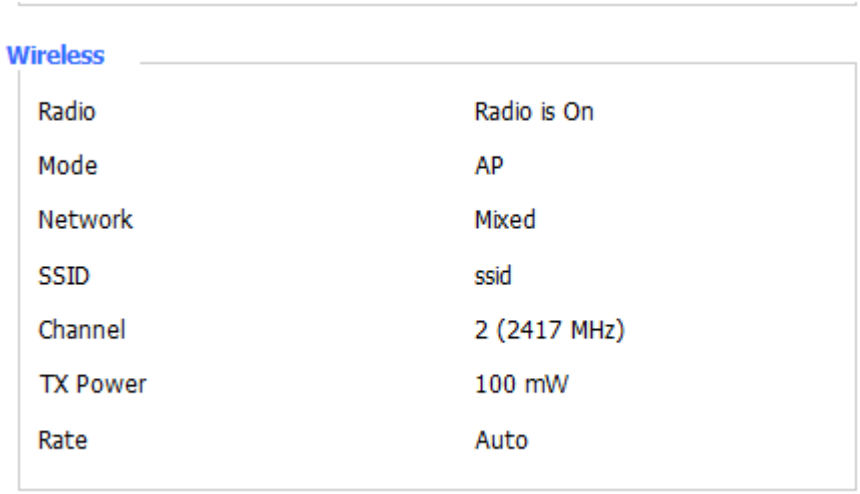
LAN MAC: MAC address of LAN port

WAN MAC: MAC address of WAN port

Wireless MAC: MAC address of the wireless

WAN IP: IP address of WAN port

LAN IP: IP address of LAN port



Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Radio: display whether radio is on or not

Mode: wireless mode

Network: wireless network mode

SSID: wireless network name

Channel: wireless network channel

TX Power: reflection power of wireless network

Rate: reflection rate of wireless network

DHCP Server: enabled or disabled

ff-radauth: enabled or disabled

USB Support: enabled or disabled

Total Available: the room for total available of RAM (that is physical memory minus some reserve and the kernel of binary code bytes)

Free: free memory, the Router will reboot if the memory is less than 500kB

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

Used: used memory, total available memory minus free memory

Buffers: used memory for buffers, total available memory minus allocated memory

Cached: the memory used by high-speed cache memory

Active: Active use of buffer or cache memory page file size

Inactive: Not often used in a buffer or cache memory page file size

DHCP Clients

Host Name	IP Address	MAC Address	Expires
*	192.168.1.143	xx:xx:xx:xx:DD:45	1 day 00:00:00
four-488e1df5fa	192.168.1.125	xx:xx:xx:xx:D8:F7	1 day 00:00:00
Mycenae-PC	192.168.1.116	xx:xx:xx:xx:5E:30	1 day 00:00:00

Host Name: host name of LAN client

IP Address: IP address of the client

MAC Address: MAC address of the client

Expires: the expiry the client rents the IP address

Appendix

The following steps describe how to setup Windows XP Hyper Terminal.

1. Press “Start” ”Programs” ”Accessories” ”Communications” ”Hyper Terminal”

2. Input connection name, choose “OK”

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735

3. Choose the correct COM port which connects to modem, choose “OK”

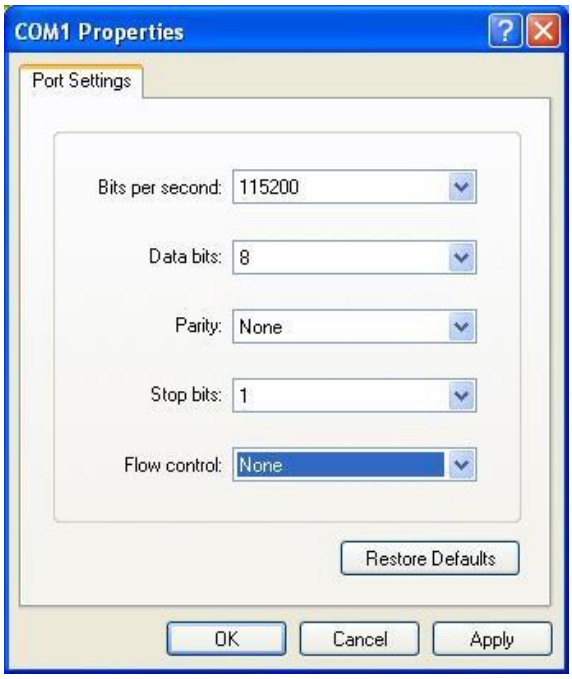
4. Configure the serial port parameters as following, choose “OK” Bits per second: 115200

Data bits: 8

Parity: None

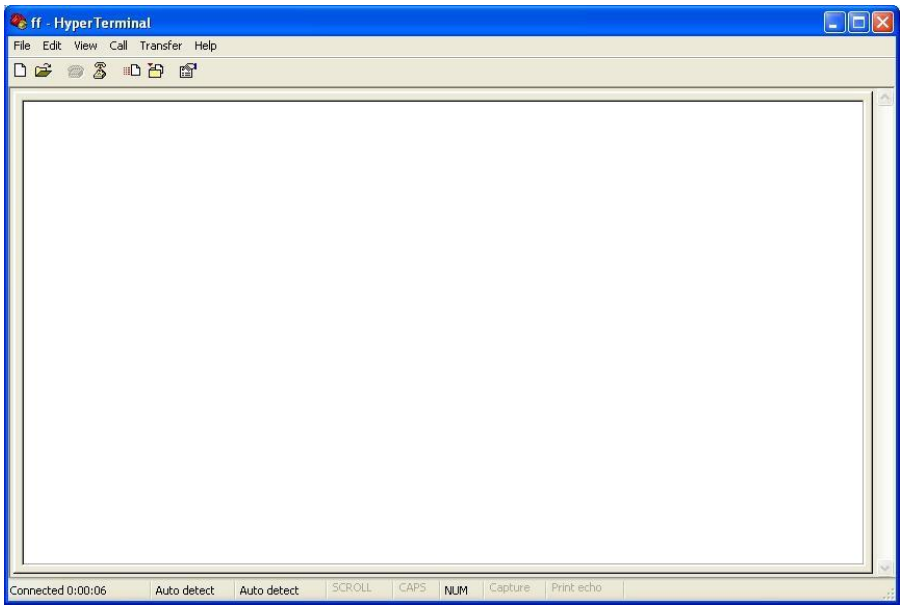
Stop bits: 1

Flow control: None



5. Complete Hyper Terminal operation, It runs as following

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735



Note: If the user is using the win7 system, you can download a win7 super terminal on the internet. Universal serial interface or other similar software.

Address: 11th Floor, A-06 Area, No.370, Chengyi Street, Jimei, Xiamen, Fujian, China.
Website: en.four-faith.com Tel: +86-592-5907276 Fax: +86-592-5912735
