

Industrial LoRaWAN[®] Gateway UG56

User Guide

Preface

Thanks for choosing Milesight UG56 LoRaWAN® gateway. UG56 delivers tenacious connection over network with full-featured design such as automated failover/failback, extended operating temperature, hardware watchdog, VPN, Gigabit Ethernet and beyond.

This guide shows you how to configure and operate the UG56 LoRaWAN® gateway. You can refer to it for detailed functionality and gateway configuration.

Readers

This guide is mainly intended for the following users:

- Network Planners
- On-site technical support and maintenance personnel
- Network administrators responsible for network configuration and maintenance

Revision History

Date	Doc Version	Description
Aug. 9, 2022	V1.0	Initial version
Apr. 21, 2023	V 1.1	<ol style="list-style-type: none"> 1. Add BACnet Server feature 2. Add Payload Codec feature 3. Add Reset and all flows export feature on Node-RED 4. Add data retransmission feature on Packet Forward 5. Add Beacon time offset 6. 8 profiles are pre-configured on Profiles page
Aug. 2, 2024	V 1.2	<ol style="list-style-type: none"> 1. Add cellular customize MTU and IMS feature; 2. Support to import ovpn file for OpenVPN connection; 3. Support packet filter feature; 4. Add default WLAN connection password; 5. Add username on SMTP client setting; 6. Add BACnet object types, support object instance customization.
Jan. 8, 2025	V 1.3	<ol style="list-style-type: none"> 1. Add MQTT data re-transmission and retain option; 2. Add metadata option and remove BACnet/IP option under Application page; 3. Add object mapping function on Payload Codec page; 4. Add BACnet object event detection feature and Notification-class object type; 5. Add Modbus server feature; 6. Add WireGuard feature; 7. Add cellular subnet mask and DNS server customization; 8. Compatible with DeviceHub 2.0; 9. Add Node-RED SSL access option. 10. Add network packet analyzer feature.

Chapter 1 Product Introduction

1.1 Overview

UG56 is a robust 8-channel industrial LoRaWAN® gateway. Adopting SX1302 LoRa chip and high-performance quad-core CPU, UG56 supports connection with more than 2000 nodes. UG56 has line of sight up to 15 km and can cover about 2 km in urbanized environment, which is ideally suited to smart building, smart industries and many other indoor applications.

UG56 supports not only multiple back-haul backups with Ethernet, Wi-Fi and cellular, but also has integrated mainstream network servers (such as The Things Industries, ChirpStack, etc.), and built-in network server and Milesight IoT Cloud for easy deployment.

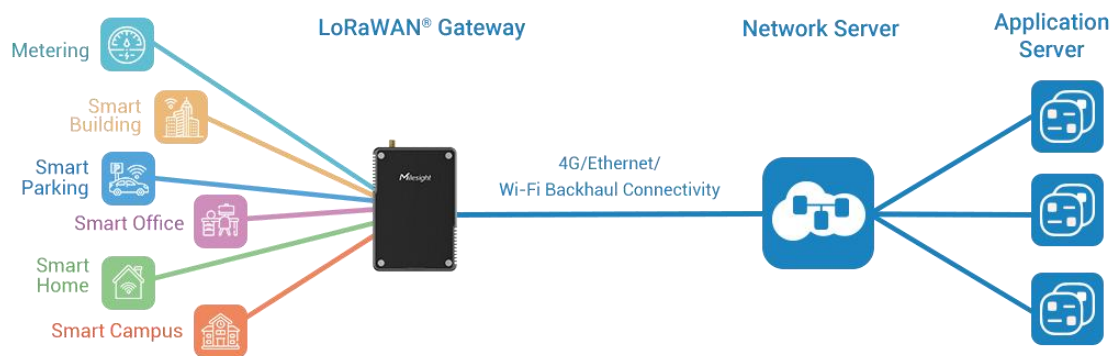

Figure 1-1

1.2 Advantages

Benefits

- Quad-core industrial CPU and big memory
- Multi-backhaul connectivity backups with Ethernet, 2.4GHz Wi-Fi and global 3G/4G LTE options make it easy to get connected
- Embedded network server and compliant with several third-party network servers
- MQTT, HTTP or HTTPS protocol for data transmission to application server
- Rugged enclosure, optimized for wall or pole mounting
- 3-year warranty included

Security & Reliability

- Automated failover/failback between Ethernet and Cellular
- Enable unit with security frameworks like IPsec/OpenVPN/GRE/L2TP/PPTP/ DMVPN
- Embedded hardware watchdog to automatically recover from various failure and ensure highest level of availability

Easy Maintenance

- Milesight DeviceHub and Milesight Development Platform provides easy setup, mass configuration, and centralized management of remote devices
- The user-friendly web interface design and various upgrading options help administrator to manage the device as easy as pie
- Web GUI and CLI enable the admin to achieve quick configuration and simple management among a large quantity of devices
- Users can efficiently manage the remote devices on the existing platform through the industrial standard SNMP

Capabilities

- Link remote devices in an environment where communication technologies are constantly changing
- Industrial quad-core 64-bit ARM Cortex-A35 processor, high-performance operating up to 1.3 GHz with low power consumption, and 8GB eMMC available to support more applications
- Support wide operating temperature ranging from -20°C to 60°C/-4°F to 140°F

1.3 Specifications

Hardware System

CPU	Quad-core 1.3 GHz, 64-bit ARM Cortex-A35
Memory	512 MB DDR3 RAM
Flash	8 GB eMMC
Extendable Storage	1 × Micro SD Slot (Internal)

LoRaWAN

Antenna Connector	1 × 50 Ω SMA Connector (Center PIN: SMA Female)
Channel	8 (Half/Full-duplex)
Frequency Band	CN470/IN865/EU868/RU864/US915/AU915/KR920/AS923-1&2&3&4
Sensitivity	-140 dBm Sensitivity @292bps
Output Power	27 dBm Max
Protocol	V1.0 Class A/Class B/Class C and V1.0.2 Class A/Class B/Class C
LBT	Support

Ethernet Interface

Port	1 × RJ45 WAN Port(PoE PD supported)
Physical Layer	10/100 Base-T (IEEE 802.3)

Data Rate	10/100 Mbps (Auto-Sensing)
Interface	Auto MDI/MDIX
Mode	Full or Half Duplex (Auto-Sensing)

Wi-Fi Interface

Antenna	Internal Antenna
Standards	IEEE 802.11b/g/n, 2.4 GHz
Mode	AP or Client mode
Security	WPA/WPA2 authentication, WEP/TKIP/AES encryption
Tx Power	802.11b: 18 dBm +/-2.0 dBm (11 Mbps)
	802.11g: 15 dBm +/-2.0 dBm (6 Mbps)
	802.11g: 15 dBm +/-2.0 dBm (54 Mbps)
	802.11n@2.4 GHz: 14 dBm +/-2.0 dBm (MCS0_HT20)
	802.11n@2.4 GHz: 14 dBm +/-2.0 dBm (MCS7_HT20)
	802.11n@2.4 GHz: 13 dBm +/-2.0 dBm (MCS0_HT40)
	802.11n@2.4 GHz: 13 dBm +/-2.0 dBm (MCS7_HT40)

Cellular Interface (Optional)

Antenna Connector	1 × 50 Ω SMA Connector (Center PIN: SMA Female)
SIM Slot	1 (Mini SIM-2FF)

Others

Reset Button	1 × RST (Internal)
Console Port	1 × Type-C
LED Indicators	1 × SYSTEM, 1 × LoRa
Built-in	Watchdog, Timer

Software

Network Protocols	PPPoE, SNMP v1/v2c/v3, TCP, UDP, DHCP, DDNS, HTTP, HTTPS, DNS, ARP, SNTP, Telnet, SSH, MQTT, MQTTS, BACnet/IP, Modbus RTU, Modbus TCP, etc.
VPN Tunnel	OpenVPN/IPsec/PPTP/L2TP/GRE/DMVPN/WireGuard
Firewall	ACL/DMZ/Port Mapping/MAC Binding/URL Filter
Management	Web, CLI, SMS, On-demand dial up, DeviceHub, Milesight IoT Cloud, Milesight Development Platform
Reliability	WAN Failover
App	Python SDK, Node-RED

Power Supply

- Power Input
1. 802.3 af PoE Input
 2. 5V, 2A by Type-C Port

Physical Characteristics

Ingress Protection	IP30
Housing & Color	Metal, Black
Dimensions	110 x 75 x 24 mm (4.33 x 2.95 x 0.94 in)
Installation	Desktop, Wall Mounting, DIN Rail Mounting

Environmental

Operating Temperature	-20°C to +60°C (-4°F to +140°F)
Storage Temperature	-40°C to +85°C (-40°F to +185°F)
Ethernet Isolation	1.5 kV RMS
Relative Humidity	0% to 95% (non-condensing) at 25°C/77°F

1.4 Dimensions (mm)

Chapter 2 Access to Web GUI

This chapter explains how to access to Web GUI of the UG56.

Username: **admin**

Password: **password**

2.1 Wireless Access

1. Enable Wireless Network Connection on your computer and search for access point **"Gateway_*****"** to connect it, the default Wi-Fi password is **iotpassword**.
2. Open a Web browser on your PC (Chrome is recommended) and type in the IP address **192.168.1.1** to access the web GUI.
3. Enter the username and password, click "Login".

If you enter the username or password incorrectly more than 5 times, the login page will be locked for 10 minutes.

4. After logging the web GUI, follow the guide to complete the basic configurations. It's suggested that you change the password for the sake of security.

Change Your Default Password

For your device security, please change the default password in time.

2.2 Wired Access

Connect PC to UG56 ETH port directly or through PoE injector to access the web GUI of gateway. The following steps are based on Windows 10 system for your reference.

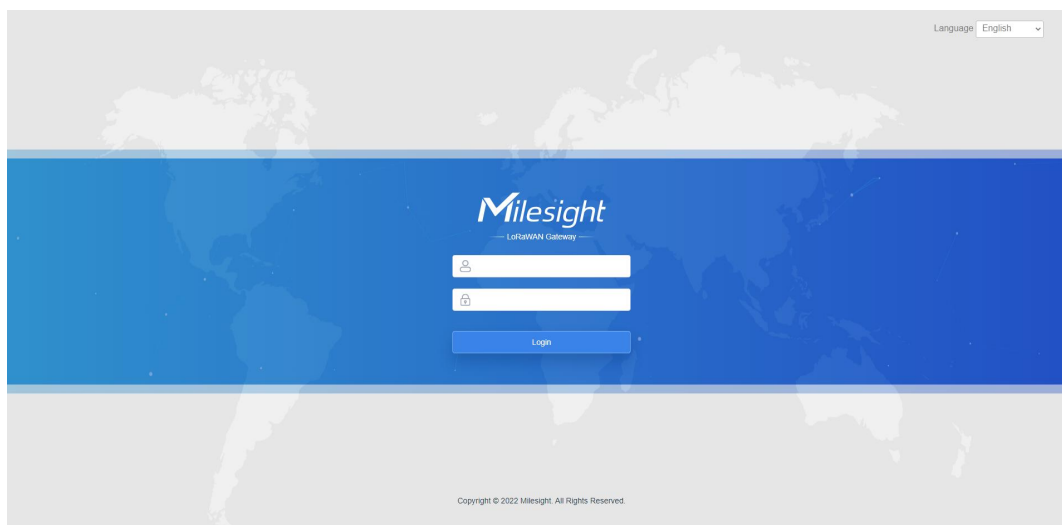

1. Go to "Control Panel" → "Network and Internet" → "Network and Sharing Center", then click "Ethernet" (May have different names).

2. Go to “Properties” → “Internet Protocol Version 4(TCP/IPv4)” and select “Use the following IP address”, then assign a static IP manually within the same subnet of the gateway.

3. Open a Web browser on your PC (Chrome is recommended) and type in the IP address **192.168.23.150** to access the web GUI.
4. Enter the username and password, click “Login”.

If you enter the username or password incorrectly more than 5 times, the login page will be locked for 10 minutes.

5. After logging the web GUI, follow the guide to complete the basic configurations. It's suggested that you change the password for the sake of security.

Change Your Default Password

For your device security, please change the default password in time.

ID	Enable	Type	Server Address	Connect Status	Operation
0	Enabled	Embedded NS	localhost	Connected	
1	Disabled	Remote Embedded NS	192.168.40.244	Disconnected	

Figure 3-2-1-1

General Settings	
Item	Description
Gateway EUI	Show the identifier of the gateway and it's non-editable. The EUI is consist of Ethernet Port's MAC address and FFFE in the middle.
Gateway ID	Fill in the corresponding ID which you've used for register gateway on the remote network server, such as TTN. It is usually the same as gateway EUI and can be changed.
Frequency-Sync	Sync frequency configurations from network server by selecting the corresponding ID.
Data Retransmission	When the gateway connects to a single Chirpstack/Semtech/Basic Station/Remote Embedded NS type package forwarder, it supports data storage up to 1 million pieces of data when network is disconnected and re-transmits the data after network recovery.
Multi-Destination	The gateway will forward the data to the network server address that was created and enabled in the list.
Connection Status	Show the connection status of package forwarder.

Figure 3-2-1-2

Packet Filters	
Parameters	Description
Filters by NetID Default Mode	Select the filter mode as black list or white list. White List: Only forward the packets on this list to the network server. Black List: Only forward the packets except this list to the network server.
Proprietary Message Filter	This only works when the packet forwarder type is Milesight Development Platform LNS or DeviceHub LNS.
Filters by NetID	Forward/Not forward the uplink packets that match the NetID.
Filters by JoinEUI	Forward/Not forward the join request packets that match the JoinEUI range.
Filters by DevEUI	Forward/Not forward the join request packets that match the DevEUI range.
List	Set the specific filtering value or range list. Every condition supports to add 5 lists at most.

Table 3-2-1-2 Packet Filters Parameters

Note:

1. When join EUI and dev EUI are both configured, only packets that match both conditions will be forwarded.
2. This feature is not supported when the packet forwarder type is Lorient or Everynet.
3. When a third-party network server assigns filter condition to gateway, the gateway will use network server settings in priority.

Radio	Choose Radio 0 or Radio 1 as center frequency.	Radio 0
Frequency/MHz	Enter the frequency of this channel. Range: center frequency \pm 0.9.	Based on the supported frequency
Bandwidth/MHz	Enter the bandwidth of this channel. Recommended value: 125KHz, 250KHz, 500KHz	Based on the supported frequency
Data Rate	Enter the data rate. Range: 500-25000.	500

Table 3-2-1-5 FSK Channel Setting Parameters

3.2.1.3 Noise Analyzer

Noise analyzer is used for scanning the noise of every frequency channel and giving a diagram for users to analyze the environment interference condition and select best deployment. RSSI indicates the sensitivity for every channel. **Lower the RSSI value, better the signal. It's not suggested to enable this feature when using package forwarder since it will affect the downlink transmission.**

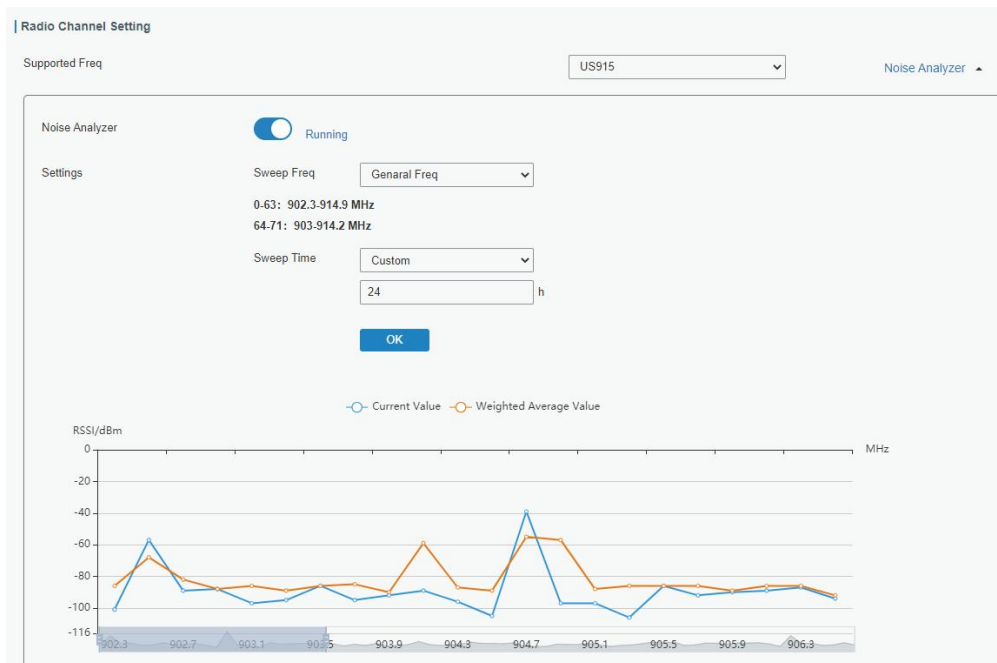

Figure 3-2-1-6

Noise Analyzer		
Item	Description	Default
Enable	Click to enable noise analyzer feature.	Disabled
Sweep Freq	Select the frequency sweeping range. General Freq: frequencies based on the LoRaWAN® regional parameters document Custom: custom the frequency range	General Freq
Sweep Time	Enable the noise analyzer continuously or within a period of time. If Custom is selected, the noise analyzer will stop automatically after the pre-configured time. Note: It's suggested to custom the time since noise analyzer feature will affect the normal data transmission.	Custom/24h

dBm

Figure 3-2-1-9

Item	Description	Default
Enable	Enable or disable LBT feature. Listen before talk (LBT) is used to detect whether the downlink channel is idle and avoid channel access conflicts. Note: AU915 and US915 do not support LBT feature.	Disabled
RSSI Target	Enter the criteria of an idle channel. If actual RSSI of a	-80

	channel is less than the criteria/target, the channel is considered as idle. Range: -120~0	
--	--	--

Table 3-2-1-9 Advanced-LBT Parameters

3.2.1.5 Custom

When Custom Configuration mode is enabled, you can write your own packet forwarder configuration file in the edit box to configure packet forwarder. Click “Save” to save your custom configuration file content, and click “Apply” to take effect. You can click “Clear” to erase all content in the edit box. If you don’t know how to write configuration file, please click “Example” to go to reference page.

Note: customized configuration will overwrite the packet forward configurations of web GUI.

The screenshot shows the 'Custom' tab in the Milesight web GUI. The 'Enable' checkbox is checked. An 'Example' link is present. A text area contains the following JSON configuration:

```
{
  "SX1302_conf": {
    "spidev_path": "/dev/spidev0.0",
    "lorawan_public": true,
    "clksrc": 0,
    "antenna_gain": 0, /* antenna gain, in dBi */
    "antenna_cfg": "ITXIRX",
    "full_duplex": false,
    "precision_timestamp": {
      "enable": false,
      "max_ts_metrics": 255,
      "nb_symbols": 1
    },
  },
  "radio_0": {
    "enable": true,
    "type": "SX1250",
    "freq": 863000000
  }
}
```

Item	Description	Default
General Setting		
Enable	Click to enable Network Server mode.	Enabled
Platform Mode	Enabled to connect gateway to Milesight IoT Cloud .	Disabled
NetID	Enter the network identifier.	010203
Join Delay	Enter the interval time between when the end-device sends a Join_request_message to network server and when the end-device prepares to open RX1 to receive the Join_accept_message sent from network server.	5
RX1 Delay	Enter the interval time between when the end-device sends uplink packets and when the end-device prepares to open RX1 to receive the downlink packet.	1
Lease Time	Enter the amount of time till a successful join expires. The format is hours-minutes-seconds. If the join-type is OTAA, then the end-devices need to join the network server again when it exceeds the lease time.	876000-00-00
Log level	Choose the log level.	Info
Channel Plan Setting		
Channel Plan	Choose LoRaWAN® channel plan used for the upstream and downlink frequencies and datarates. Available channel plans depend on the gateway's model.	Depend on the gateway's frequency
Channel	<p>Enabled frequencies are controlled using channel mask.</p> <p>Leave it blank means using all the default standard usable channels specified in the LoRaWAN® regional parameters document.</p> <p>It allows to enter the index of the cahnnels.</p> <p>Examples:</p> <p>1, 40: Enabling Channel 1 and Channel 40</p> <p>1-40: Enabling Channel 1 to Channel 40</p> <p>1-40, 60: Enabling Channel 1 to Channel 40 and Channel 60</p> <p>All: Enabling all channels</p> <p>Null: Indicates that all channels are disabled</p>	Depend on the gateway's frequency

Table 3-2-2-1 General Parameters

Note: For some regional variants, if allowed by your LoRaWAN® region, you can use Additional Plan to configure additional channels undefined by the LoRaWAN® Regional

Parameters, like EU868 and KR920, as the following picture shows:

Frequency(MHz)	Min Datarate	Max Datarate	Operation
			+

Figure 3-2-2-2

Additional Channels		
Item	Description	Default
Frequency/MHz	Enter the frequency of the additional plan.	Null.
Max Datarate	Enter the max datarate for the end-device. The range is based on what is specified in the LoRaWAN® regional parameters document.	DR0(SF12,125kHz)
Min Datarate	Enter the min datarate for the end-device. The range is based on what is specified in the LoRaWAN® regional parameters document.	DR3(SF9,125kHz)

Table 3-2-2-2 Additional Plan Parameters

3.2.2.2 Application

An application is a collection of devices with the same purpose/of the same type. Users can add a series of devices to the same application which needs to send to the same server.

You can edit the application by clicking  or create a new application by clicking .

Type	Operation
	+

Figure 3-2-2-3

Item	Description
Name	Enter the name of the application profile. E.g Smoker-sensor-app.
Description	Enter the description of this application. E.g a application for smoker sensor.
Metadata	After enabled, application ID, device EUI and device name will be added to reported data automatically when the device adds the payload codec.
Data	Data will be sent to your custom server using the MQTT, HTTP or

Transmission	HTTPS protocol. One application can only add one MQTT transmission and one HTTP (HTTPS) transmission.

Error notification	<input type="text"/>	<input type="checkbox"/>	QoS 0
Request data	<input type="text"/>		QoS 0
Response data	<input type="text"/>	<input type="checkbox"/>	QoS 0

Figure 3-2-2-5

MQTT Settings

Item	Description
General	
Broker Address	MQTT broker address to receive data.
Broker Port	MQTT broker port to receive data.
Client ID	Client ID is the unique identity of the client to the server. It must be unique when all clients are connected to the same server, and it is the key to handle message at QoS 1 and 2.
Connection Timeout/s	If the client does not get a response after the connection timeout, the connection will be considered as broken. The Range: 1-65535
Keep Alive Interval/s	After the client is connected with the server, the client will send heartbeat packet to the server regularly to keep alive. Range: 1-65535
Data Retransmission	After enabled, it supports data storage of up to 10,000 pieces of data when the network is disconnected and re-transmits the data after network recovery.
User Credentials	
Enable	Enable user credentials.
Username	The username used for connecting to MQTT broker.
Password	The password used for connecting to MQTT broker.
TLS	
Enable	Enable the TLS encryption in MQTT communication.
Mode	Select from "Self-signed certificates", "CA signed server certificate". CA signed server certificate: verify with the certificate issued by Certificate Authority (CA) that pre-loaded on device. Self-signed certificates: upload the custom CA certificates (.crt or .pem), client Certificates (.crt) and secret key(.key) for verification.
Topic	
Data Type	Data type sent to MQTT broker. Uplink Data: receive device uplink packets Downlink Data: send downlink commands to device Multicast Downlink Data: send downlink commands to multicast group Join Notification: receive join request packets from devices ACK Notification: receive ACK packets from devices Error Notification: receive error packets from devices Request data: send requests to enquire and configure the gateway NS Response data: receive the request responses
Topic	Topic name of the data type using for publish.
Retain	Enable to set the latest message of this topic as retain message.
QoS	QoS 0 – Only Once This is the fastest method and requires only 1 message. It is also the most unreliable transfer mode. QoS 1 – At Least Once This level guarantees that the message will be delivered at least once, but may be delivered more than once.

	<p>QoS 2 – Exactly Once</p> <p>QoS 2 is the highest level of service in MQTT. This level guarantees that each message is received only once by the intended recipients. QoS 2 is the safest and slowest quality of service level.</p>

Custom Payload Codec	
Item	Description
Name	Enter the unique name of the custom payload codec.
Description	Enter the description of this payload codec.
Template	Select an existing inbuilt payload codec as a template.
Payload Decoder Function	Customize the device payload decoder to convert hex format data to JSON format. Note that the function header should be the same as the example on the blanks.
Payload Encoder Function	Customize the device payload encoder to convert JSON format message to hex format command. Note that the function header should be the same as the example on the blanks.
Payload Codec Test	<p>Disable or enable payload codec test.</p> <p>fPort: Application port of LoRaWAN® devices. It's 85 by default for Milesight LoRaWAN® devices.</p> <p>Decode: Enter the hex format raw data without blank spaces and click Decode to check the result.</p> <p>Encode: Enter the JSON format command and check Encode to check the result.</p>
Object Mapping Function	Customize the mapping to convert LoRaWAN® message to BACnet or Modbus objects.

Table 3-2-2-7 Custom Payload Codec Parameters

Note:

1. The supported JavaScript version of payload decoder and encoder is ES5.
2. The variable names used in decoders and encoders of one Payload Codec must be the same if they point to the same items.

3.2.2.4 Profiles

A Profile defines the device capabilities and boot parameters that are needed by the Network Server for setting the LoRaWAN® radio access service. These information elements shall be provided by the end-device manufacturer. UG56 has pre-configured 8 device files and users can also create a new device profile.

Device Profiles				
Name	Max TXPower	Join Type	Class Type	Operation
ClassA-ABP	0	ABP	Class A	 
ClassA-OTAA	0	OTAA	Class A	 
ClassB-ABP	0	ABP	Class A Class B	 
ClassB-OTAA	0	OTAA	Class A Class B	 
ClassC-ABP	0	ABP	Class A Class C	 
ClassC-OTAA	0	OTAA	Class A Class C	 
ClassCB-ABP	0	ABP	Class A Class B Class C	 
ClassCB-OTAA	0	OTAA	Class A Class B Class C	 
test	0	OTAA	Class A Class B Class C

Figure 3-2-2-12

Device Profile Advanced Settings		
Item	Description	Default
MAC Version	Choose the version of the LoRaWAN® supported by the end-device.	1.0.2
Regional Parameter Revision	Revision of the Regional Parameters document supported by the end-device.	B
RX1 Datarate Offset	The offset which used for calculating the RX1 data-rate, based on the uplink data-rate.	Based on what is specified in the LoRaWAN® regional parameters document
RX2 Datarate	Enter the RX2 datarate which used for the RX2 receive-window.	
RX2 Channel Frequency	RX2 channel frequency which used for the RX2 receive-window.	
Frequency List	List of factory-preset frequencies. The range is based on what is specified in the LoRaWAN® regional parameters document.	Null
Device Channel	Change this device frequency channel by typing the channel indexes. When configured, it takes precedence over the global channel. This setting only works for CN470/US915/AU915 gateway.	Null
PingSlot Period	Period of opening the pingslot.	Every Second
PingSlot DataRate	Datarate of the node receiving downlinks.	Based on the supported frequency
PingSlot Freq	Frequency of the node receiving downlinks.	Based on the supported frequency
ACK Timeout	The time for confirmed downlink transmissions. This option is only applicable to class B and class	Class B: 10 Class C: 10

	C.

Table 3-2-2-9 Device Profiles Advanced Setting Parameters

3.2.2.5 Device

A device is the end-device connecting to, and communicating over the LoRaWAN® network.

The screenshot shows a web interface for managing devices. At the top, there are buttons for 'Add', 'Bulk Import', and 'Delete All', along with a search bar. Below these is a table with the following columns: Device Name, Device EUI, Device-Profile, Payload Codec, Application, Last Seen, Activated, and Operation. The table contains four rows of device data.

Device Name	Device EUI	Device-Profile	Payload Codec	Application	Last Seen	Activated	Operation
AM308	24E124707E043923	ClassA-OTAA	AM308	cloud	1 day ago	✓	✎ ✕

Figure 3-2-2-14

Device Configuration	
Item	Description
Device Name	Enter the name of this device.
Description	Enter the description of this device.
Device EUI	Enter the EUI of this device.
Device-Profile	Choose the device profile.
Application	Choose the application profile.
Payload Codec	Choose the payload codec existed on Payload Codec page.
fPort	Enter the downlink port of device, it's 85 by default for Milesight devices.
Modbus RTU Data Transmission	<p>Choose from: "Disable", "Modbus RTU to TCP", "Modbus RTU over TCP". This feature is only applicable to Milesight LoRaWAN® controllers.(UC501/UC300, etc.)</p> <p>Modbus RTU to TCP: TCP client can send Modbus TCP commands to ask for controller Modbus data.</p> <p>Modbus RTU over TCP: TCP client can send Modbus RTU commands to ask for controller Modbus data.</p>
Modbus RTU Fport	Enter the LoRaWAN® frame port for transparent transmission between Milesight LoRaWAN® controllers and UG56.

	Range: 2-84, 86-223. Note: this value must be the same as the Milesight LoRaWAN® controller's Fport.
TCP Port	Enter the TCP port for data transmission between the TCP Client and UG56 (as TCP Server). Range: 1-65535.
Frame-Counter Validation	If disable the frame-counter validation, it will compromise security as it enables people to perform replay-attacks.
Application Key	Whenever an end-device joins a network via over-the-air activation, the application key is used for derive the Application Session key.
Device Address	The device address identifies the end-device within the current network.
Network Session Key	The network session key specific for the end-device. It is used by the end-device to calculate the MIC or part of the MIC (message integrity code) of all uplink data messages to ensure data integrity.
Application Session Key	The AppSKey is an application session key specific for the end-device. It is used by both the application server and the end-device to encrypt and decrypt the payload field of application-specific data messages.
Uplink Frame-counter	The number of data frames which sent uplink to the network server. It will be incremented by the end-device and received by the end-device. Users can reset the a personalized end-device manually, then the frame counters on the end-device and the frame counters on the network server for that end-device will be reset to 0.
Downlink Frame-counter	The number of data frames which received by the end-device downlink from the network server. It will be incremented by the network server. Users can reset the a personalized end-device manually, then the frame counters on the end-device and the frame counters on the network server for that end-device will be reset to 0.

3.2.2.6 Multicast Groups

Milesight gateways support for creating Class B or Class C multicast groups to send downlink messages to a group of end devices. A multicast group is a virtual ABP device (i.e. shared session keys), does not support uplink, confirmed downlink nor MAC commands.

Figure 3-2-2-15

Item	Description
Add	Add a multicast group.
Group Name	Show the name of the group.
Number of Devices	Show the device number of the group.
Operation	Edit or delete the multicast group.

Table 3-2-2-12 Multicast Group Parameters

The screenshot displays a configuration form for a multicast group. The parameters and their values are as follows:

- Group Name:** (Empty text input field)
- Multicast Address:** (Empty text input field)
- Multicast Network Session Key:** (Empty text input field)
- Multicast Application Session Key:** (Empty text input field)
- Class Type:** Dropdown menu set to "Class C".
- Datarate:** Dropdown menu set to "DR8(SF12,500KHz)".
- Frequency:** Text input field containing "923300000" with a unit "Hz" to its right.
- Frame-counter:** Text input field containing "0".
- Selected Devices:** A large empty rectangular box for listing devices.
- Add Device:** A dropdown menu with a downward arrow icon.

Figure 3-2-2-16

Multicast Group Configuration	
Item	Description
Group Name	Enter the name of this multicast group.
Multicast Address	Device address (Dev Addr) of all devices in this group.
Multicast Network Session Key	The network session key (Netwks Key) of all devices in this group.
Multicast Application Session Key	The application session key (AppSKey) of all devices in this group.
Class Type	Class B and Class C are optional.
Datarate	Datarate of the node receiving downlinks
Frequency	Downlink frequency of all devices in this group.
Frame-counter	The number of data frames which received by the end-device downlink from the network server. It will be incremented by the network server.

Ping Slot Periodicity	Period of opening the pingslot. This is only applied to Class B end devices.
Selected Devices	Show all device names in this group.
Add Device	Add devices in the pull-down list.

Table 3-2-2-13 Multicast Group Setting Parameters

3.2.2.7 Gateway Fleet

Milesight gateways can connect to UG56 network server. A gateway supports to add 100 gateways at most.

Gateway Fleet				
Gateway ID	Name	Status	Last Seen	Operation

Device EUI/Group Name	24E124126A210644
Class Type	Class C
Immediately	-
Timestamp	2721022973
Type	UpUnc
Adr	false
AdrAckReq	false
Ack	false
Fcnt	969
Port	85

Figure 3-2-2-20

Item	Description
Dev Addr/Multicast Addr	Show the address of the device/multicast group.
GwEUI	Show the EUI of the gateway.
AppEUI	Show the EUI of the application.
DevEUI/Group Name	Show the EUI of the device/multicast group name.
Class Type	Show the class type of the device or multicast group.
Immediately	True: Device may transmit an explicit (possibly empty) acknowledgement data message immediately after the reception of a data message requiring a confirmation.
Timestamp	Show the time to receive this packet after packet forwarder starts running. Unit: ms
Type	Show the type of the packet: JnAcc - Join Accept Packet

	<p>JnReq - Join Request Packet</p> <p>UpUnc - Uplink Unconfirmed Packet</p> <p>UpCnf - Uplink Confirmed Packet - ACK response from network requested</p> <p>DnUnc - Downlink Unconfirmed Packet</p> <p>DnCnf - Downlink Confirmed Packet- ACK response from end-device requested</p>
Adr	<p>True: The end-node has enabled ADR.</p> <p>False: The end-node has not enabled ADR.</p>
AdrAckReq	<p>In order to validate that the network is receiving the uplink messages, nodes periodically transmit ADRACKReq message. This is 1 bit long.</p> <p>True: Network should respond in ADR_ACK_DELAY time to confirm that it is receiving the uplink messages.</p> <p>False: ADR is disabled or Network does not respond in ADR_ACK_DELAY.</p>
Ack	<p>True: This frame is ACK.</p> <p>False: This frame is not ACK.</p>
Fcnt	<p>Show the frame-counter of this packet. The network server tracks the uplink frame counter and generates the downlink counter for each end-device.</p>
FPort	<p>FPort is a multiplexing port field. If the frame payload field is not empty, the port field must be present. If present, a FPort 16 value of 0 indicates that the FRMPayload contains MAC commands only. When this is the case, the FOptsLen field must be zero. FOptsLen is the length of the FOpts field in bytes.</p>
Modulation	<p>LoRa means the physical layer uses the LoRa modulation.</p>
Bandwidth	<p>Show the bandwidth of this channel.</p>
SpreadFactor	<p>Show the spreadFactor of this channel.</p>
Bitrate	<p>Show the bitrate of this channel.</p>
CodeRate	<p>Show the coderate of this channel.</p>
SNR	<p>Show the SNR of this channel.</p>
RSSI	<p>Show the RSSI of this channel.</p>
Power	<p>Show the transmit power of the device.</p>
Payload (b64)	<p>Show the application payload of this packet.</p>
Payload (hex)	<p>Show the application payload of this packet.</p>
Json	<p>Show the data after decoded.</p>
MIC	<p>Show the MIC of this packet. MIC is a cryptographic message integrity code, computed over the fields MHDR, FHDR, FPort and the encrypted FRMPayload.</p>

IP Port	<input type="text" value="47808"/>
Time TO Live	<input type="text" value="60000"/> s

Figure 3-3-1-1

Server Settings	
Item	Description
Enable	Enable or disable BACnet server function.
UDP Port	Set communication port of BACnet/IP. Range: 1-65535. The default port is 47808.
Device ID	The unique BACnet device identifier which needs to avoid conflict with other devices.
Device Name	The device name to represent the device.
BBMD	Enable BBMD(BACnet/IP Broadcast Management Device) if BACnet devices of different network subnets should work together.
IP Address	Fill in the IP address of BBMD device or external device registrar.
IP Port	Fill in the UDP/IP port for external device registration.
Time TO Live	Number of seconds used on external device registration.

Table 3-3-1-1 Server Parameters

3.3.1.2 BACnet Object

The screenshot shows the 'BACnet Object' management interface. At the top, there are buttons for 'Add Object', 'Add NC Object', 'Bulk Import', 'Bulk Export', and 'Delete'. A search bar is located on the right. Below the buttons is a table with the following columns: Object Name, Object Type, Object Instance Nr, Present Value, Unit, Updates, Update Time, COV, and Operation. The table lists two objects for 'WT101': 'WT101.temperat...' (Analog-Value, Instance 0) and 'WT101.temperat...' (Analog-Value, Instance 1). Both objects have a present value of '-', a unit of '°C', 0 updates, and are disabled. Each row has edit and delete icons in the Operation column.

Object Name	Object Type	Object Instance Nr	Present Value	Unit	Updates	Update Time	COV	Operation
WT101								
WT101.temperat...	Analog-Value	0	-	°C	0	-	Disabled	[Edit] [Delete]
WT101.temperat...	Analog-Value	1	-	°C	0	-	Disabled	[Edit] [Delete]

Figure 3-3-1-2

Item	Description
Add Object	<p>Click to select desired objects to add to this server. The gateway supports adding 2000 objects at most.</p> <p>Note: ensure the content of payload codec is correct, and the device selects the correct payload codec.</p> <p>The screenshot shows the 'Add BACnet Object' interface. It has a search bar and a table with columns: Object Name, Object Type, Unit, Related Object, and Operation. The table lists three objects for 'AM308': 'battery' (Analog-Input, Unit %), 'buzzer_status' (Binary-Input), and 'co2' (Analog-Input, Unit ppm). Each row has an edit icon in the Operation column.</p>
Add NC Object	Add a Notification-Class type object to determine the recipients of alarms. The gateway supports adding 200 NC objects at most.
Bulk Import	Download template to import multiple BACnet objects.
Bulk Export	Select desire objects to export as .xlsx format file.
Delete	Select desire objects to delete.
Object Name	Show the name of the BACnet object.
Object Type	Show the type of this object.
Object Instance Nr	Show the instance number of this object.
Present Value	Show the latest value of object.
Units	Show the unit of this object value.
Updates	Show the update times of this object value.
Update time	Show the time for this object to get and update the data.
COV	Show if COV (Change of value) is enabled.
Operation	Edit or delete the object.

BACnet Object Configuration	
Item	Description
Device Name	Show the name of devices.
LoRa Object	Show the corresponding name of LoRa object.
Object Name	Customize an unique name for this object.
Object Type	Select the object type as Binary Input/Output/Value, Analog Input/Output/Value, MultiState Input/Output/Value and CharacterString value.
The Object Instance	Customize the object instance.
Description	Enter the description of this object.
Event Detection	Enable to report the alarm of this value. It requires to define at least one notification class object first.
Analog Input/Output/Value	
Units	Select the unit of this object value.
COV	When object value changes, the BACnet server (gateway) will send notification of new value to BACnet client. This only applies to analog type objects.
COV Increment	Only when the object value reaches or over this increment, the BACnet server (gateway) will send the notification.
Relinquish Default	If there is no command, the analog output will be set as this relinquish default value.
Binary Input/Output/Value	

Polarity	Define the binary input/output status as Normal or Reverse.
Active Text	Characterize the intended effect of active state of binary type object value. Example: when a button is pressed and binary input is 1, active text can be defined as "Pressed".
Inactive Text	Characterize the intended effect of inactive state of binary type object value. Example: for a button, inactive text can be defined as "Unpressed".
Relinquish Default	If there is no command, the binary output will be set as this relinquish default value.
MultiState Input/Output/Value	
Number of States	Set the number of states and define the name of every state.
Relinquish Default	If there is no command, the multistate output will be set as this relinquish default value.
Event Detection	
Notification Class	Select the notification class to determine the recipients of this alarm.
Event	Select the event type to report.
Limit Event	When object type is analog type, select if reporting the event when reaching the high limit or low limit.
Deadband	Under To Offnormal status, when current value returns to (high limit-deadband) value or (low limit+deadband) lasting the delay time, the device will generate To Normal event. Only Analog types have this option.
Time Delay	Only when current value matches the threshold condition or is out of threshold for this time, the device will report the corresponding event.
Alarm Value	Report the To Offnormal event if the current value is equal to alarm value for delay time; report To Normal event if the current value is not equal to alarm value for delay time. Only Binary Input, Binary Value, Multi-State Input or Multi-State Value has this option.
Fault Value	Report the To Fault event if the current value is equal to fault value. Only Multi-State Input or Multi-State Value has this option.
Feedback Value	Report the To Offnormal event if the current value is equal to feedback value for delay time; report To Normal event if the current value is not equal to feedback value for delay time. Only Multi-State Output or Binary Output has this option.
Notification Type	Select the notification type as Alarm or Event.

3.4 Network

3.4.1 Interface

3.4.1.1 Port

The Ethernet port can be connected with Ethernet cable to get Internet access. It supports 3 connection types.

- **Static IP:** configure IP address, netmask and gateway for Ethernet WAN interface.
- **DHCP Client:** configure Ethernet WAN interface as DHCP Client to obtain IP address automatically.
- **PPPoE:** configure Ethernet WAN interface as PPPoE Client.

Related Configuration Example

Ethernet Connection

1. Static IP Configuration

If the external network assigns a fixed IP for the Ethernet port, user can select "Static IP" mode.

The screenshot shows the configuration page for 'Port_1'. The 'Connection Type' is set to 'Static IP'. The following fields are filled in:

- Port: eth 0
- Connection Type: Static IP
- IP Address: 192.168.23.150
- Netmask: 255.255.255.0
- Gateway: 192.168.23.1
- MTU: 1500
- Primary DNS Server: 8.8.8.8
- Secondary DNS Server: 223.5.5.5
- Enable NAT: ☒

Below these fields is a section for 'Multiple IP Address' with a table header: IP Address, Netmask, and Operation. A '+' button is visible at the bottom right of this section.

Figure 3-4-1-2

Static IP		
Item	Description	Default

Table 3-4-1-3 DHCP Client Parameters

3. PPPoE

PPPoE refers to a point to point protocol over Ethernet. User has to install a PPPoE client on the basis of original connection way. With PPPoE, remote access devices can get control of each user.

The screenshot shows the configuration interface for 'Port_1'. It includes fields for Port (eth 0), Connection Type (PPPoE), Username, Password, Link Detection Interval(s) (60), Max Retries (0), MTU (1500), Use Peer DNS (unchecked), Primary DNS Server (8.8.8.8), Secondary DNS Server (223.5.5.5), and Enable NAT (checked).

3.4.1.4 Loopback

Loopback interface is used for replacing gateway's ID as long as it is activated. When the interface is DOWN, the ID of the gateway has to be selected again which leads to long convergence time of OSPF. Therefore, Loopback interface is generally recommended as the ID of the gateway.

Loopback interface is a logic and virtual interface on gateway. Under default conditions, there's no loopback interface on gateway, but it can be created as required.

Figure 3-4-1-11

Loopback		
Item	Description	Default
IP Address	Unalterable	127.0.0.1
Netmask	Unalterable	255.0.0.0
Multiple IP Addresses	Apart from the IP above, user can configure other IP addresses.	Null

Table 3-4-1-9 Loopback Parameters

3.4.1.5 VLAN Trunk

UG56 gateway supports the Ethernet port working as VLAN Trunk client and be assigned a VLAN ID, which easy to traffic classification. When VLAN ID is set, port on **"Network" > "Interface" > "Port"** can be chosen as eth0.x with x being VLAN ID. VLAN Setting is blank

by default, you can add a new VLAN label to certain interface by clicking .

Figure 3-4-1-12

VLAN Trunk	
Item	Description
Interface	Select the VLAN interface, it's fixed as eth0.
VID	Set the label ID of the VLAN. Range: 1-4094.

Table 3-4-1-10 VLAN Trunk Parameters

3.4.2 Firewall

This section describes how to set the firewall parameters, including website block, ACL, DMZ, Port Mapping and MAC Binding.

The firewall implements corresponding control of data flow at entry direction (from Internet to local area network) and exit direction (from local area network to Internet) according to the content features of packets, such as protocol style, source/destination IP address, etc. It ensures that the gateway operate in a safe environment and host in local area network.

3.4.2.1 Security

The screenshot shows a web interface for security configuration. At the top, there are tabs: Security (selected), ACL, DMZ, Port Mapping, and MAC Binding. Below the tabs, there are two sections for website blocking. The first section, 'Website Blocking by URL Address', has a text input field containing 'http://' and a blue 'X' button to its right. Below the input field is a blue '+' button. The second section, 'Website Blocking by Keyword', has an empty text input field and a blue 'X' button to its right. Below the input field is a blue '+' button.

Figure 3-4-2-1

Website Blocking	
URL Address	Enter the HTTP address which you want to block.
Keyword	You can block specific website by entering keyword. The maximum number of character allowed is 64.

Table 3-2-2-1 Security Parameters

3.4.2.2 ACL

Access control list, also called ACL, implements permission or prohibition of access for specified network traffic (such as the source IP address) by configuring a series of matching rules so as to filter the network interface traffic. When gateway receives packet, the field will be analyzed according to the ACL rule applied to the current interface. After the special packet is identified, the permission or prohibition of corresponding packet will be implemented according to preset strategy.

The data package matching rules defined by ACL can also be used by other functions requiring flow distinction.

3.4.2.3 DMZ

DMZ is a host within the internal network that has all ports exposed, except those forwarded ports in port mapping.

Figure 3-4-2-3

DMZ	
Item	Description
Enable	Enable or disable DMZ.
DMZ Host	Enter the IP address of the DMZ host on the internal network.
Source Address	Set the source IP address which can access to DMZ host. "0.0.0.0/0" means any address.

Table 3-4-2-3 DMZ Parameters

3.4.2.4 Port Mapping (DNAT)

When external services are needed internally (for example, when a website is published externally), the external address initiates an active connection. And, the router or the gateway on the firewall receives the connection. Then it will convert the connection into the an internal connection. This conversion is called DNAT, which is mainly used for external and interval services.

Click  to add a new port mapping rules.

Source IP	Source Port	Destination IP	Destination Port	Protocol	Description	Operation
0.0.0.0/0				TCP		X
						+

Figure 3-4-2-4

Port Mapping	
Item	Description
Source IP	Specify the host or network which can access local IP address. 0.0.0.0/0 means all.
Source Port	Enter the TCP or UDP port from which incoming packets are forwarded. Range: 1-65535.
Destination IP	Enter the IP address that packets are forwarded to after being received on the incoming interface.
Destination Port	Enter the TCP or UDP port that packets are forwarded to after being received on the incoming port(s). Range: 1-65535.
Protocol	Select from "TCP" and "UDP" as your application required.
Description	The description of this rule.

3.4.4 DDNS

Dynamic DNS (DDNS) is a method that automatically updates a name server in the Domain Name System, which allows user to alias a dynamic IP address to a static domain name. DDNS serves as a client tool and needs to coordinate with DDNS server. Before starting configuration, user shall register on a website of proper domain name provider and apply for a domain name.

Figure 3-4-4-1

DDNS	
Item	Description
Name	Give the DDNS a descriptive name.
Interface	Set interface bundled with the DDNS.
Service Type	Select the DDNS service provider.
Username	Enter the username for DDNS register.
User ID	Enter User ID of the custom DDNS server.
Password	Enter the password for DDNS register.
Server	Enter the name of DDNS server.
Hostname	Enter the hostname for DDNS.
Append IP	Append your current IP to the DDNS server update path.

Table 3-4-4-1 DDNS Parameters

3.4.5 Link Failover

This section describes how to configure link failover strategies, such as VRRP strategies.

Configuration Steps

1. Define one or more SLA operations (ICMP probe).
2. Define one or more track objects to track the status of SLA operation.
3. Define applications associated with track objects, such as VRRP or static routing.

3.4.5.1 SLA

SLA setting is used for configuring link probe method. The default probe type is ICMP.

ID	Type	Destination Address	Secondary Destination Address	Data Size	Interval(s)	Timeout(ms)	Packet Loss Count	Start Time	Operation
1	icmp-echo	8.8.8.8	223.5.5.5	56	15	5000	3	now	X

Figure 3-4-5-1

SLA		
Item	Description	Default
ID	SLA index. Up to 10 SLA settings can be added. Range: 1-10.	1
Type	ICMP-ECHO is the default type to detect if the link is alive.	icmp-echo
Destination Address	The detected IP address.	8.8.8.8
Secondary Destination Address	The secondary detected IP address.	223.5.5.5
Data Size	User-defined data size. Range: 0-1000.	56
Interval (s)	User-defined detection interval. Range: 1-608400.	30
Timeout (ms)	User-defined timeout for response to determine ICMP detection failure. Range: 1-300000.	5000
Packet Loss Count	Define packet loss count in each SLA probe. SLA probe fails when the preset packet loss count is exceeded.	5
Start Time	Detection start time; select from "Now" and blank character. Blank character means this SLA detection doesn't start.	now

Table 3-4-5-1 SLA Parameters

3.4.5.2 Track

Track setting is designed for achieving linkage among SLA module, Track module and

Application module. Track setting is located between application module and SLA module with main function of shielding the differences of various SLA modules and providing unified interfaces for application module.

Linkage between Track Module and SLA module

Once you complete the configuration, the linkage relationship between Track module and SLA module will be established. SLA module is used for detection of link status, network performance and notification of Track module. The detection results help track status change timely.

- For successful detection, the corresponding track item is Positive.
- For failed detection, the corresponding track item is Negative.

Linkage between Track Module and Application Module

After configuration, the linkage relationship between Track module and Application module will be established. When any change occurs in track item, a notification that requires corresponding treatment will be sent to Application module.

Currently, the application modules like VRRP and static routing can get linkage with track module.

If it sends an instant notification to Application module, the communication may be interrupted in some circumstances due to routing's failure like timely restoration or other reasons. Therefore, user can set up a period of time to delay notifying application module when the track item status changes.

ID	Type	SLA ID	Interface	Negative Delay(s)	Positive Delay(s)	Operation
1	sla	1	wlan0	0	1	[x] [+]

Figure 3-4-5-2

Item	Description	Default
Index	Track index. Up to 10 track settings can be configured. Range: 1-10.	1
Type	The options are "sla" and "interface".	SLA
SLA ID	Defined SLA ID.	1
Interface	Select the interface whose status will be detected.	cellular0
Negative Delay (s)	When interface is down or SLA probing fails, it will wait according to the time set here before actually changing its status to Down. Range: 0-180 (0 refers to immediate switching).	0
Positive Delay (s)	When failure recovery occurs, it will wait according to the time set here before actually changing its status to Up. Range: 0-180 (0 refers to immediate	1

	switching).

Table 3-4-5-2 Track Parameters

3.4.5.3 WAN Failover

WAN failover refers to failover between Ethernet WAN interface and cellular interface. When service transmission can't be carried out normally due to malfunction of a certain interface or lack of bandwidth, the rate of flow can be switched to backup interface quickly. Then the backup interface will carry out service transmission and share network flow so as to improve reliability of communication of data equipment.

When link state of main interface is switched from up to down, system will have the pre-set delay works instead of switching to link of backup interface immediately. Only if the state of main interface is still down after delay, will the system switch to link of backup interface. Otherwise, system will remain unchanged.

Main Interface	Backup Interface	Startup Delay(s)	Up Delay(s)	Down Delay(s)	Track ID	Operation
Cellular 0	eth 0	30	0	0	1	X
						+

Figure 3-4-5-3

WAN Failover		
Parameters	Description	Default
Main Interface	Select a link interface as the main link.	--
Backup Interface	Select a link interface as the backup link.	--
Startup Delay (s)	Set how long to wait for the startup tracking detection policy to take effect. Range: 0-300.	30
Up Delay (s)	When the primary interface switches from failed detection to successful detection, switching can be delayed based on the set time. Range: 0-180 (0 refers to immediate switching)	0
Down Delay (s)	When the primary interface switches from successful detection to failed detection, switching can be delayed based on the set time. Range: 0-180 (0 refers to immediate switching).	0
Track ID	Track detection, select the defined track ID.	--

Table 3-4-5-3 WAN Failover Parameters

3.4.6 VPN

Virtual Private Networks, also called VPNs, are used to securely connect two private

networks together so that devices can connect from one network to the other network via secure channels.

UG56 supports DMVPN, IPsec, GRE, L2TP, PPTP, OpenVPN, as well as GRE over IPsec and L2TP over IPsec.

3.4.6.1 DMVPN

A dynamic multi-point virtual private network (DMVPN), combining mGRE and IPsec, is a secure network that exchanges data between sites without passing traffic through an organization's headquarter VPN server or gateway.

DMVPN	
Item	Description
Enable	Enable or disable DMVPN.
Hub Address	The IP address or domain name of DMVPN Hub.
Local IP address	DMVPN local tunnel IP address.
GRE Hub IP Address	GRE Hub tunnel IP address.
GRE Local IP Address	GRE local tunnel IP address.

GRE Netmask	GRE local tunnel netmask.
GRE Key	GRE tunnel key.
Negotiation Mode	Select from "Main" and "Aggressive".
Authentication Algorithm	Select from "DES", "3DES", "AES128", "AES192" and "AES256".
Encryption Algorithm	Select from "MD5" and "SHA1".
DH Group	Select from "MODP768_1", "MODP1024_2" and "MODP1536_5".
Key	Enter the preshared key.
Local ID Type	Select from "Default", "ID", "FQDN", and "User FQDN"
IKE Life Time (s)	Set the lifetime in IKE negotiation. Range: 60-86400.
SA Algorithm	Select from "DES_MD5", "DES_SHA1", "3DES_MD5", "3DES_SHA1", "AES128_MD5", "AES128_SHA1", "AES192_MD5", "AES192_SHA1", "AES256_MD5" and "AES256_SHA1".
PFS Group	Select from "NULL", "MODP768_1", "MODP1024_2" and "MODP1536-5".
Life Time (s)	Set the lifetime of IPsec SA. Range: 60-86400.
DPD Interval Time (s)	Set DPD interval time
DPD Timeout (s)	Set DPD timeout.
Cisco Secret	Cisco Nhrp key.
NHRP Holdtime (s)	The holdtime of Nhrp protocol.

Table 3-4-6-1 DMVPN Parameters

3.4.6.2 IPSec

IPsec is especially useful for implementing virtual private networks and for remote user access through dial-up connection to private networks. A big advantage of IPsec is that security arrangements can be handled without requiring changes to individual user computers.

IPsec provides three choices of security service: Authentication Header (AH), Encapsulating Security Payload (ESP), and Internet Key Exchange (IKE). AH essentially allows authentication of the senders' data. ESP supports both authentication of the sender and data encryption. IKE is used for cipher code exchange. All of them can protect one and more data flows between hosts, between host and gateway, and between gateways.

Figure 3-4-6-3

IPsec	
Item	Description
Enable	Enable IPsec tunnel. A maximum of 3 tunnels is allowed.
IPsec Gateway Address	Enter the IP address or domain name of remote IPsec server.
IPsec Mode	Select from "Tunnel" and "Transport".
IPsec Protocol	Select from "ESP" and "AH".
Local Subnet	Enter the local subnet IP address that IPsec protects.
Local Subnet Netmask	Enter the local netmask that IPsec protects.
Local ID Type	Select from "Default", "ID", "FQDN", and "User FQDN".
Remote Subnet	Enter the remote subnet IP address that IPsec protects.
Remote Subnet Mask	Enter the remote netmask that IPsec protects.
Remote ID type	Select from "Default", "ID", "FQDN", and "User FQDN".

IKE Parameter	
Item	Description
IKE Version	Select from "IKEv1" and "IKEv2".
Negotiation Mode	Select from "Main" and "Aggressive".
Encryption Algorithm	Select from "DES", "3DES", "AES128", "AES192" and "AES256".
Authentication Algorithm	Select from "MD5" and "SHA1"
DH Group	Select from "MODP768_1", "MODP1024_2" and "MODP1536_5".
Local Authentication	Select from "PSK" and "CA".
Local Secrets	Enter the preshared key.
XAUTH	Enter XAUTH username and password after XAUTH is enabled.
Lifetime (s)	Set the lifetime in IKE negotiation. Range: 60-86400.
SA Parameter	
SA Algorithm	Select from "DES_MD5", "DES_SHA1", "3DES_MD5", "3DES_SHA1", "AES128_MD5", "AES128_SHA1", "AES192_MD5", "AES192_SHA1", "AES256_MD5" and "AES256_SHA1".
PFS Group	Select from "NULL", "MODP768_1", "MODP1024_2" and "MODP1536_5".
Lifetime (s)	Set the lifetime of IPsec SA. Range: 60-86400.

DPD Interval Time(s)	Set DPD interval time to detect if the remote side fails.
DPD Timeout(s)	Set DPD timeout. Range: 10-3600.
IPsec Advanced	
Enable Compression	The head of IP packet will be compressed after it's enabled.
VPN Over IPsec Type	Select from "NONE", "GRE" and "L2TP" to enable VPN over IPsec function.

Table 3-4-6-3 IPsec Parameters

3.4.6.3 GRE

Generic Routing Encapsulation (GRE) is a protocol that encapsulates packets in order to route other protocols over IP networks. It's a tunneling technology that provides a channel through which encapsulated data message can be transmitted and encapsulation and decapsulation can be realized at both ends.

In the following circumstances the GRE tunnel transmission can be applied:

- GRE tunnel can transmit multicast data packets as if it were a true network interface. Single use of IPSec cannot achieve the encryption of multicast.
- A certain protocol adopted cannot be routed.
- A network of different IP addresses shall be required to connect other two similar networks.

Figure 3-4-6-5

GRE	
Item	Description
Enable	Check to enable GRE function.

Remote IP Address	Enter the real remote IP address of GRE tunnel.
Local IP Address	Set the local IP address.
Local Virtual IP Address	Set the local tunnel IP address of GRE tunnel.
Netmask	Set the local netmask.
Peer Virtual IP Address	Enter remote tunnel IP address of GRE tunnel.
Global Traffic Forwarding	All the data traffic will be sent out via GRE tunnel when this function is enabled.
Remote Subnet	Enter the remote subnet IP address of GRE tunnel.
Remote Netmask	Enter the remote netmask of GRE tunnel.
MTU	Enter the maximum transmission unit. Range: 64-1500.
Key	Set GRE tunnel key.
Enable NAT	Enable NAT traversal function.

Table 3-4-6-4 GRE Parameters

3.4.6.4 L2TP

Layer Two Tunneling Protocol (L2TP) is an extension of the Point-to-Point Tunneling Protocol (PPTP) used by an Internet service provider (ISP) to enable the operation of a virtual private network (VPN) over the Internet.

Figure 3-4-6-6

L2TP	
Item	Description
Enable	Check to enable L2TP function.
Remote IP Address	Enter the public IP address or domain name of L2TP server.

Username	Enter the username that L2TP server provides.
Password	Enter the password that L2TP server provides.
Authentication	Select from "Auto", "PAP", "CHAP", "MS-CHAPv1" and "MS-CHAPv2".
Global Traffic Forwarding	All of the data traffic will be sent out via L2TP tunnel after this function is enabled.
Remote Subnet	Enter the remote IP address that L2TP protects.
Remote Subnet Mask	Enter the remote netmask that L2TP protects.
Key	Enter the password of L2TP tunnel.
Use L2TP Peer DNS	Enable to use the DNS address of peer L2TP server .

Table 3-4-6-5 L2TP Parameters

Figure 3-4-6-7

Advanced Settings	
Item	Description
Local IP Address	Set tunnel IP address of L2TP client. Client will obtain tunnel IP address automatically from the server when it's null.
Peer IP Address	Enter tunnel IP address of L2TP server.
Enable NAT	Enable NAT traversal function.
Enable MPPE	Enable MPPE encryption.
Address/Control Compression	For PPP initialization. User can keep the default option.
Protocol Field Compression	For PPP initialization. User can keep the default option.
Asyncmap Value	One of the PPP protocol initialization strings. User can keep the default value. Range: 0-ffffff.

MRU	Set the maximum receive unit. Range: 64-1500.
MTU	Set the maximum transmission unit. Range: 128-1500
Link Detection Interval (s)	Set the link detection interval time to ensure tunnel connection. Range: 0-600.
Max Retries	Set the maximum times of retry to detect the L2TP connection failure. Range: 0-10.
Expert Options	User can enter some other PPP initialization strings in this field and separate the strings with blank space.

Table 3-4-6-6 L2TP Parameters

3.4.6.5 PPTP

Point-to-Point Tunneling Protocol (PPTP) is a protocol that allows corporations to extend their own corporate network through private "tunnels" over the public Internet. Effectively, a corporation uses a wide-area network as a single large local area network.

Figure 3-4-6-8

PPTP	
Item	Description
Enable	Enable PPTP client. A maximum of 3 tunnels is allowed.
Remote IP Address	Enter the public IP address or domain name of PPTP server.
Username	Enter the username that PPTP server provides.
Password	Enter the password that PPTP server provides.
Authentication	Select from "Auto", "PAP", "CHAP", "MS-CHAPv1", and "MS-CHAPv2".
Global Traffic Forwarding	All of the data traffic will be sent out via PPTP tunnel once enable this function.
Remote Subnet	Set the peer subnet of PPTP.

Remote Subnet
Mask

Set the netmask of peer PPTP server.

Item	Description
Local IP Address	Set IP address of PPTP client.
Peer IP Address	Enter tunnel IP address of PPTP server.
Enable NAT	Enable the NAT faction of PPTP.
Enable MPPE	Enable MPPE encryption.
Address/Control Compression	For PPP initialization. User can keep the default option.
Protocol Field Compression	For PPP initialization. User can keep the default option.
Asyncmap Value	One of the PPP protocol initialization strings. User can keep the default value. Range: 0-ffffff.
MRU	Enter the maximum receive unit. Range: 64-1500.
MTU	Enter the maximum transmission unit. Range: 128-1500.
Link Detection Interval (s)	Set the link detection interval time to ensure tunnel connection. Range: 0-600.
Max Retries	Set the maximum times of retrying to detect the PPTP connection failure. Range: 0-10.
Expert Options	User can enter some other PPP initialization strings in this field and separate the strings with blank space.

Table 3-4-6-8 PPTP Parameters

3.4.6.6 OpenVPN Client

OpenVPN is an open source virtual private network (VPN) product that offers a simplified security framework, modular network design, and cross-platform portability. UG56 supports running at most 3 OpenVPN clients at the same time. You can import the ovpn file directly or configure the parameters on this page to set clients.

Figure 3-4-6-10

OpenVPN Client - File Configuration	
Item	Description
Browse	Click to browse the client configuration ovpn format file including the settings and certificate contents. Please refer to the client configuration file according to sample: client.conf
Edit	Click to edit the imported file.
Export	Export the server configuration file.
Delete	Click to delete the configuration file.

Table 3-4-6-9 OpenVPN Client Parameters

Figure 3-4-6-11

OpenVPN Client - Page Configuration	
Item	Description
Protocol	Select a transport protocol used by connecting UDP and TCP.
Remote IP Address	Enter remote OpenVPN server's IP address or domain name.

Port	Enter the TCP/UDP service number of remote OpenVPN server. Range: 1-65535.
Interface	Select virtual VPN network interface type from TUN and TAP. TUN devices encapsulate IPv4 or IPv6 (OSI Layer 3) while TAP devices encapsulate Ethernet 802.3 (OSI Layer 2).
Authentication Type	<p>Select authentication type used to secure data sessions.</p> <p>Pre-shared: use the same secret key as server to complete the authentication. After selecting, go to Network > VPN > Certifications page to import a static.key to PSK field.</p> <p>Username/Password: use username/password which is preset in server side to complete the authentication.</p> <p>X.509 cert: use X.509 type certificate to complete the authentication. After selecting, go to Network > VPN > Certifications page to import CA certificate, client certificate and client private key to corresponding fields.</p> <p>X.509 cert + user: use both username/password and X.509 cert authentication type.</p>
Local Virtual IP	Set local tunnel address when authentication type is None or Pre-shared .
Remote Virtual IP	Set remote tunnel address when authentication type is None or Pre-shared .
Global Traffic Forwarding	All the data traffic will be sent out via OpenVPN tunnel when this function is enabled.
Enable TLS Authentication	<p>Disable or enable TLS authentication when authentication type is X.509 cert. After being enabled, go to Network > VPN > Certifications page to import a ta.key to TA field.</p> <p>Note: this option only supports tls-auth. For tls-crypt, please add this format string on expert option: <code>tls-crypt /etc/openvpn/openvpn-client1-ta.key</code></p>
Compression	Select to enable or disable LZO to compress data.
Link Detection Interval (s)	Set link detection interval time to ensure tunnel connection. If this is set on both server and client, the value pushed from server will override the client local values. Range: 10-1800 s.
Link Detection Timeout (s)	OpenVPN will be reestablished after timeout. If this is set on both server and client, the value pushed from server will override the client local values. Range: 60-3600 s.
Cipher	Select from NONE, BF-CBC, DES-CBC, DES-EDE3-CBC, AES-128-CBC, AES-192-CBC and AES-256-CBC.
MTU	Enter the maximum transmission unit. Range: 128-1500.
Max Frame Size	Set the maximum frame size. Range: 128-1500.
Verbose Level	Select from ERROR, WARNING, NOTICE and DEBUG.
Expert Options	<p>User can enter some initialization strings in this field and separate the strings with semicolon.</p> <p>Example: <code>ncp-ciphers AES-128-GCM; key direction 1</code></p>
Local Route	
Subnet	Set the local route's IP address.

Subnet Mask	Set the local route's netmask.
-------------	--------------------------------

Table 3-4-6-10 OpenVPN Client Parameters

3.4.6.7 OpenVPN Server

UG56 supports OpenVPN server to create secure point-to-point or site-to-site connections in routed or bridged configurations and remote access facilities. You can import the ovpn file directly or configure the parameters on this page to set this server.

OpenVPN Server - Page Configuration	
Item	Description
Protocol	Select a transport protocol used by connection from UDP and TCP.
Listening IP	Enter the local hostname or IP address for bind. If left blank, OpenVPN

	server will bind to all interfaces.
Port	Enter the TCP/UCP service number for OpenVPN client connection. Range: 1-65535.
Interface	Select virtual VPN network interface type from TUN and TAP. TUN devices encapsulate IPv4 or IPv6 (OSI Layer 3) while TAP devices encapsulate Ethernet 802.3 (OSI Layer 2).
Authentication Type	Select authentication type used to secure data sessions. Pre-shared: use the same secret key as server to complete the authentication. After select, go to Network > VPN > Certifications page to import a static.key to PSK field. Username/Password: use username/password which is preset in server side to complete the authentication. X.509 cert: use X.509 type certificate to complete the authentication. After select, go to Network > VPN > Certifications page to import CA certificate, client certificate and client private key to corresponding fields. X.509 cert + user: use both username/password and X.509 cert authentication type.
Local Virtual IP	Set local tunnel address when authentication type is None or Pre-shared .
Remote Virtual IP	Set remote tunnel address when authentication type is None or Pre-shared .
Client Subnet	Define an IP address pool for openVPN client.
Client Netmask	Set the client subnet netmask to limit the IP address range.
Renegotiation Interval	Renegotiate data channel key after this interval. 0 means disable.
Max Clients	Limit server to a maximum of concurrent clients, range: 1-20. Note: please adjust log severity to Info if you need to connect many clients.
Enable CRL	Enable or disable CRL verify.
Enable Client to Client	When enabled, openVPN clients can communicate with each other.
Enable Dup Client	Allow multiple clients to connect with the same common name or certification.
Enable TLS Authentication	Disable or enable TLS authentication when authentication type is X.509 cert. After being enabled, go to Network > VPN > Certifications page to import a ta.key to TA field. Note: this option only supports tls-auth. For tls-crypt, please add this format string on expert option: tls-crypt /etc/openvpn/openvpn-client1-ta.key
Compression	Select to enable or disable LZO to compress data.
Link Detection Interval (s)	Set link detection interval time to ensure tunnel connection. If this is set on both server and client, the value pushed from server will override the client local values. Range: 10-1800 s.
Link Detection Timeout (s)	OpenVPN will be reestablished after timeout. If this is set on both server and client, the value pushed from server will override the client local values. Range: 60-3600 s.
Cipher	Select from NONE, BF-CBC, DES-CBC, DES-EDE3-CBC, AES-128-CBC,

	AES-192-CBC and AES-256-CBC.
MTU	Enter the maximum transmission unit. Range: 64-1500.
Max Frame Size	Set the maximum frame size. Range: 64-1500.
Verbose Level	Select from ERROR, WARNING, NOTICE and DEBUG.
Expert Options	User can enter some initialization strings in this field and separate the strings with semicolon. Example: ncp-ciphers AES-128-GCM; key direction 1
Account	
Username & Password	Set username and password for OpenVPN client when authentication type is username/password.
Local Route	
Subnet	Set the local route's IP address.
Subnet Mask	Set the local route's netmask.
Client Subnet	
Name	Set the name as OpenVPN client certificate common name.
Subnet	Set the subnet of OpenVPN client.
Subnet Mask	Set the subnet netmask of OpenVPN client.

Table 3-3-6-12 OpenVPN Server Parameters

3.4.6.8 Certifications

When working as OpenVPN server, OpenVPN client or IPsec Server, user can import/export necessary certificate and key files to this page according to the authentication types.

The screenshot shows the 'OpenVPN Client' configuration page. It features a list of clients, with 'OpenVPN client_1' selected. For each client, there are input fields for CA, Public Key, Private Key, TA, Preshared Key, and PKCS12. Each input field is accompanied by 'Browse', 'Import', 'Export', and 'Delete' buttons. Below the list, there are expandable sections for 'OpenVPN client_2' and 'OpenVPN client_3'.

WireGuard-Peer	
Item	Description
Peer	Set a WireGuard peer name. This name should be unique in this

	WireGuard client.
Public Key	Set the public key of WireGuard peer server/client.
Allowed IP	Set the real IP address and netmask of WireGuard peer's LAN network. Example: 192.168.1.0/24 One WireGuard peer supports to add 8 allowed IP addresses.
Route Allowed IP	Enable or disable to add static routings of allowed IP addresses.
Preshared Key	Set the presahred key and both this interface and peer interface should set the same key value.
Endpoint Address	Set IP address or domain name of WireGuard peer server/client.
Endpoint Port	Set the destination port of WireGuard peer server/client.
Keepalive Interval	After the connection is established, this WireGuard interface will send heartbeat packet regularly to keep alive. 0 means disabled.

Table 3-4-6-13 WireGuard-Peer Parameters

3.5 System

This section describes how to configure general settings, such as administration account, access service, system time, common user management, SNMP, event alarms, etc.

3.5.1 General Settings

3.5.1.1 General

General settings include system info, access service and HTTPS certificates.

The screenshot shows the 'General' settings page. At the top, there are tabs: General, System Time, SMTP, Phone, and Email. The 'General' tab is selected. Below the tabs, there are three main sections:

- System**: Contains 'Hostname' (GATEWAY) and 'Web Login Timeout(s)' (1800).
- Access Service**: A table with columns 'Enable', 'Service', and 'Port'.

Enable	Service	Port
<input checked="" type="checkbox"/>	HTTP	80
<input checked="" type="checkbox"/>	HTTPS	443
<input type="checkbox"/>	TELNET	23
<input checked="" type="checkbox"/>	SSH	22
- HTTPS Certificates**: Contains 'Certificate' (https.crt) and 'Key' (https.key). Each field has 'Browse', 'Import', 'Export', and 'Delete' buttons.

Figure 3-5-1-1

General		
Item	Description	Default
System		
Hostname	User-defined gateway name, needs to start with a letter.	GATEWAY
Web Login Timeout (s)	You need to log in again if it times out. Range: 100-3600.	1800
Access Service		
Port	Set port number of the services. Range: 1-65535.	--
HTTP	Users can log in the device locally via HTTP to access and control it through Web after the option is checked.	80
HTTPS	Users can log in the device locally and remotely via HTTPS to access and control it through Web after option is checked.	443
TELNET	Users can log in the device locally and remotely via TELNET to access and control it through Web after option is checked.	23
SSH	Users can log in the device locally and remotely via SSH after the option is checked.	22
HTTPS Certificates		
Certificate	Click "Browse" button, choose certificate file on the PC, and then click "Import" button to upload the file into gateway. Click "Export" button will export the file to the PC. Click "Delete" button will delete the file.	--
Key	Click "Browse" button, choose key file on the PC, and then click "Import" button to upload the file into gateway. Click "Export" button will export file to the PC. Click "Delete" button will delete the file.	--

Table 3-5-1-1 General Setting Parameters

3.5.1.2 System Time

This section explains how to set the system time including time zone and time synchronization type.

Note: to ensure that the gateway runs with the correct time, it's recommended that you set the system time when configuring the gateway.

3.5.1.4 Phone

Phone settings involve in call/SMS trigger and SMS alarm for events. This is only applied to gateway with cellular feature.

The screenshot shows the 'Phone' tab in a settings menu. Below the tab, there is a 'Phone Number List' section. It contains a table with three columns: 'Name', 'Number', and 'Operation'. The 'Name' column has a text input field with 'List1'. The 'Number' column has a text input field with '654321;123456'. The 'Operation' column has two buttons: a blue 'X' button and a blue '+' button. Below the table is a blue 'Save' button.

3.5.3 SNMP

SNMP is widely used in network management for network monitoring. SNMP exposes management data with variables form in managed system. The system is organized in a management information base (MIB) which describes the system status and configuration. These variables can be remotely queried by managing applications.

Configuring SNMP in networking, NMS, and a management program of SNMP should be set up at the Manager.

Configuration steps are listed as below for achieving query from NMS:

1. Enable SNMP setting.
2. Download MIB file and load it into NMS.
3. Configure MIB View.
4. Configure VCAM.

3.5.3.1 SNMP

UG56 supports SNMPv1, SNMPv2c and SNMPv3 version. SNMPv1 and SNMPv2c employ community name authentication. SNMPv3 employs authentication encryption by username and password.

The screenshot displays the 'SNMP Settings' configuration page in the Milesight UG56 web interface. The left sidebar shows the 'SNMP' menu item selected. The main panel has tabs for 'SNMP', 'MIB View', 'VACM', 'Trap', and 'MIB'. The 'SNMP' tab is active, showing the 'SNMP Settings' section. The settings include an 'Enable' checkbox, a 'Port' field set to 161, a 'System Name' field with the value 24E124FFFEF24660, an 'SNMP Version' dropdown menu set to SNMPv2, and empty text boxes for 'Location Information' and 'Contact Information'. A 'Save' button is located at the bottom of the settings area.

Table 3-6-2-1 Schedule Parameters

3.6.3 Log

The system log contains a record of informational, error and warning events that indicates how the system processes. By reviewing the data contained in the log, an administrator or user troubleshooting the system can identify the cause of a problem or whether the system processes are loading successfully. Remote log server is feasible, and gateway will upload all system logs to remote log server such as Syslog Watcher.

3.6.3.1 System Log

This section describes how to download log file and view the recent log on web.

The screenshot shows a web interface for 'System Log' with two tabs: 'System Log' (active) and 'Log Settings'. Under the 'System Log' tab, there are two sections: 'Download' and 'Log'. In the 'Download' section, there is a 'File' dropdown menu set to 'Log File' and a 'Download' button. In the 'Log' section, there is a 'View recent(lines)' dropdown menu set to '20'. Below these is a scrollable text area displaying system log entries, such as 'Thu Jul 18 15:01:25 2019 user.notice redis[1859]: Background saving terminated with success'. At the bottom of the interface is a 'Clear Log' button.

3.7 APP

3.7.1 Python

Python is an object-oriented programming language that has gained popularity because of its clear syntax and readability.

As an interpreted language, Python has a design philosophy that emphasizes code

readability, notably using whitespace indentation to delimit code blocks rather than curly brackets or keywords, and a syntax that allows programmers to express concepts in fewer lines of code than it's used in other languages such as C++ or Java. The language provides constructs and intends to enable writing clear programs on both small and large scale.

Users can use Python to quickly generate the prototype of the program, which can be the final interface of the program, rewrite it with a more appropriate language, and then encapsulate the extended class library that Python can call.

This section describes how to view the relevant running status such as App-manager, SDK version, extended storage, etc. Also you can change the App-manager configuration, and import the Python App package from here.

Chapter 4 Application Examples

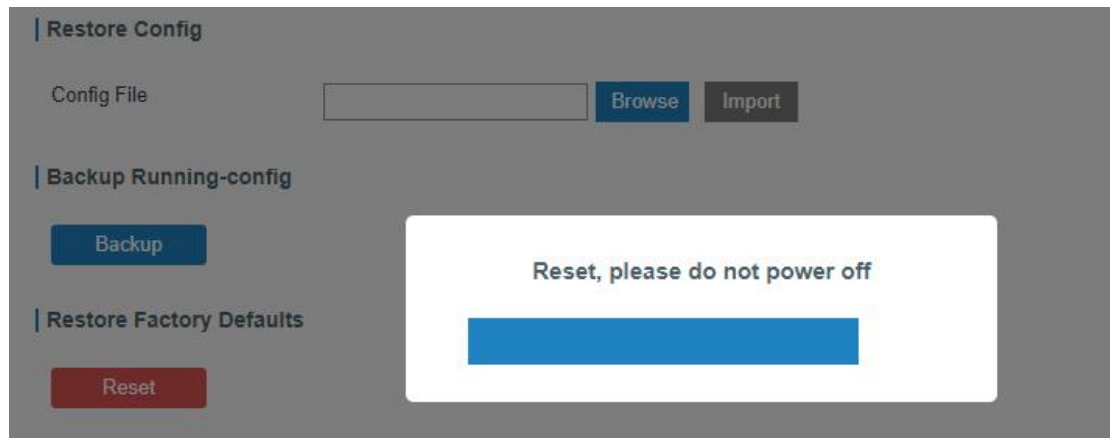

4.1 Restore Factory Defaults

Method 1:

Log in web interface, and go to **Maintenance > Backup and Restore**, click **Reset** button, you will be asked to confirm if you'd like to reset it to factory defaults. Then click **Reset** button.

Then the gateway will reboot and restore to factory settings immediately.

Please wait till SYS light statically and the login page pops up again, which means the gateway has already been reset to factory defaults successfully.

Related Topic

[Restore Factory Defaults](#)

Method 2:

Locate the reset button on the gateway, press and hold the reset button for more than 5s until the SYS LED blinks.

4.2 Firmware Upgrade

It is suggested that you contact Milesight technical support first before you upgrade gateway firmware. Gateway firmware file suffix is “.bin”.

After getting firmware file, please refer to the following steps to complete the upgrade.

1. Go to “Maintenance > Upgrade”.
2. Click “Browse” and select the correct firmware file from the PC.
3. Click “Upgrade” and the gateway will check if the firmware file is correct. If it’s correct, the firmware will be imported to the gateway, and then the gateway will start to upgrade.
4. After upgrade, open the gateway web GUI via browser to check if upgrade success. Before opening, it is suggested to clean the caches of browser.

The screenshot shows a web interface for gateway maintenance. At the top, there is a tab labeled "Gateway". Below it, the "Firmware Version" is displayed as "56.0.0.5". There is a checkbox for "Reset Configuration to Factory Default". Under the "Upgrade Firmware" section, there is a text input field for the firmware file path, followed by a blue "Browse" button and a grey "Upgrade" button.

4.5 Wi-Fi Application Example

4.5.1 AP Mode

Application Example

Configure UG56 as AP to allow connection from users or devices.

Configuration Steps

1. Go to “Network > Interface > WLAN” to configure wireless parameters as below.

Port	WLAN	Cellular	Loopback
WLAN			
Enable	<input checked="" type="checkbox"/>		
Work Mode	AP		
SSID Broadcast	<input checked="" type="checkbox"/>		
AP Isolation	<input type="checkbox"/>		
Radio Type	802.11n(2.4GHz)		
Channel	Auto		
SSID	Gateway_F1200F		
BSSID	24:e1:24:f1:20:0f		
Encryption Mode	No Encryption		
Bandwidth	20MHz		
Max Client Number	10		

Click “Save” and “Apply” buttons after all configurations are done.

2. Use a smart phone to connect the access point of gateway. Go to “Status > WLAN”, and you can check the AP settings and information of the connected client/user.

Overview	Packet Forward	Cellular	Network	WLAN	VPN
WLAN Status					
Wireless Status	Enabled				
MAC Address	24:e1:24:f1:20:0f				
Interface Type	AP				
SSID	Gateway_F1200F				
Channel	Auto				
Encryption Type	No Encryption				
Status	Up				
IP Address	192.168.1.1				
Netmask	255.255.255.0				
Connection Duration	0 days, 02:40:52				

4.5.2 Client Mode

Application Example

Configure UG56 as Wi-Fi client to connect to an access point to have Internet access.

Configuration Steps

1. Go to "Network > Interface > WLAN" and click "Scan" to search for WiFi access point.

Port

WLAN

Cellular

Loopback

< GoBack

SSID	Channel	Signal	Cipher	BSSID	Security	Frequency	
AAA	Auto	-61dBm	AES	24:e1:24:f0:c4:13	WPA-PSK/WPA2-PSK	2412MHz	<div>Join Network</div>

2. Select one access point and click "Join Network", then type the password of the access point.

Port	WLAN	Cellular	Loopback
WLAN			
Enable	<input checked="" type="checkbox"/>		
Work Mode	Client		Scan
SSID	AAA		
BSSID	24:e1:24:f0:c4:13		
Encryption Mode	WPA-PSK/WPA2-PSK		
Cipher	AES		
Key	*****		
IP Setting			
Protocol	DHCP Client		

Click “Save” and “Apply” buttons after all configurations are done.

3. Go to “Status > WLAN”, and you can check the connection status of the client.

Overview	Packet Forward	Cellular	Network	WLAN
WLAN Status				
Wireless Status	Enabled			
MAC Address	24:e1:24:f0:de:14			
Interface Type	Client			
SSID	AAA			
Channel	Auto			
Encryption Type	WPA-PSK/WPA2-PSK			
Cipher	AES			
Status	Connected			
IP Address	192.168.1.145			
Netmask	255.255.255.0			
Connection Duration	0 days, 02:44:45

4.6 Packet Forwarder Configuration

UG56 gateway has installed multiple packet forwarders including Semtech, Basic station,

Chirpstack-Generic MQTT broker, etc. Before connecting make sure the gateway has connected to network.

1. Go to "Packet Forwarder" > "General".

The screenshot shows the 'General' tab of the Milesight Gateway configuration interface. It includes sections for 'General Setting' and 'Multi-Destination'.

General Setting

- Gateway EUI: 24E124FFFEF12257
- Gateway ID: 24E124FFFEF12257
- Frequency-Sync: Disabled

Multi-Destination

ID	Enable	Type	Server Address	Connect Status	Operation
0	Enabled	Embedded NS	localhost	Connected	

A blue '+' button is located at the bottom right of the table.

2. Click to add a new network server. Fill in the network server information and enable this server.

The screenshot shows the 'Add New Network Server' form. It includes the following fields:

- Enable: ☒
- Type: Semtech
- Server Address: eu1.cloud.thethings.network
- Port Up: 1700
- Port Down: 1700

A blue 'Save' button is located at the bottom right of the form.

3. Go to "Packet Forwarder -> Radio" page to configure antenna type, center frequency and channels. The channels of the gateway and network server need to be the same.

Region US915

Name	Center Frequency/MHz
Radio 0	904.3
Radio 1	905.0

Multi Channels Setting

Enable	Index	Radio	Frequency/MHz
<input checked="" type="checkbox"/>	0	Radio 0	903.9
<input checked="" type="checkbox"/>	1	Radio 0	904.1
<input checked="" type="checkbox"/>	2	Radio 0	904.3
<input checked="" type="checkbox"/>	3	Radio 0	904.5
<input checked="" type="checkbox"/>	4	Radio 1	904.7
<input checked="" type="checkbox"/>	5	Radio 1	904.9
<input checked="" type="checkbox"/>	6	Radio 1	905.1
<input checked="" type="checkbox"/>	7	Radio 1	905.3

4. Add the gateway on network server page. For more details about the network server connection please refer to [Milesight IoT Support portal](#).
5. Go to "Traffic" page to view the data communication of UG56.

GeneralRadiosAdvancedCustomTraffic

Traffic Setting

StopClear

0	up	05:57:30	212136749 3	903.9	SF10BW125	4/5	-51	13.2
0	up	05:57:29	211944923 1	904.5	SF7BW125	4/5	-95	8.5
0	up	05:57:13	210431205 7	904.6	SF8BW500	4/5	-51	11.5
0	up	05:57:06	209699855 6	903.9	SF7BW125	4/5	-65	14.2

4.7 Connect to Milesight IoT Cloud

1. Go to "Packet Forwarder->General" page to enable the embedded network server.

Status | **General** | Radios | Advanced | Custom | Traffic

Packet Forwarder | Network Server | Network | System | Maintenance | APP

General Setting

Gateway EUI: 24E124FFFEF12257

Gateway ID: 24E124FFFEF12257

Frequency-Sync: Disabled

Multi-Destination

ID	Enable	Type	Server Address	Connect Status	Operation
0	Enabled	Embedded NS	localhost	Connected	

2. Go to "Packet Forwarder-> Radio" page to select the antenna type, center frequency and channels. The channels of the gateway and nodes need to be the same.

Region: US915

Name	Center Frequency/MHz
Radio 0	904.3
Radio 1	905.0

Multi Channels Setting

Enable	Index	Radio	Frequency/MHz
<input checked="" type="checkbox"/>	0	Radio 0	903.9
<input checked="" type="checkbox"/>	1	Radio 0	904.1
<input checked="" type="checkbox"/>	2	Radio 0	904.3
<input checked="" type="checkbox"/>	3	Radio 0	904.5
<input checked="" type="checkbox"/>	4	Radio 1	904.7
<input checked="" type="checkbox"/>	5	Radio 1	904.9
<input checked="" type="checkbox"/>	6	Radio 1	905.1
<input checked="" type="checkbox"/>	7	Radio 1	905.3

3. Go to "Network Server" → "General" page to enable the network server and "Cloud mode", then select "Milesight IoT Cloud".

4. Log in the Milesight IoT Cloud. Then go to “My Devices” page and click “+New Devices” to add gateway to Milesight IoT Cloud via SN. Gateway will be added under “Gateways” menu.

5. The gateway is online on Milesight IoT Cloud.

4.8 Application Configuration

You can create a new application on this page, which is mainly used to define the method of decoding the data sent from end-device and choosing the data transport protocol to send data to another server address. The data will be sent to your custom server address using MQTT, HTTP or HTTPS protocol.

1. Go to “Network Server” > “Application”.

2. Click  to enter the configuration page, displayed as the following picture:

3. Click "Save" to create this application.
4. Click  to add a data transmission type.

HTTP or HTTPS:

Step 1: select HTTP or HTTPS as transmission protocol.

Step 2: Enter the destination URL. Different types of data can be sent to different URLs.

Data Type	URL
Uplink data	<input type="text"/>
Join notification	<input type="text"/>
ACK notification	<input type="text"/>
Error notification	<input type="text"/>

Enter the header name and header value if there is user credentials when accessing the HTTP(s) server.

Header Name	Header Value	Operation
<input type="text"/>	<input type="text"/>	
		

MQTT:

- Step 1: select the transmission protocol as MQTT.
- Step 2: Fill in MQTT broker general settings.

General

Broker Address	<input type="text"/>
Broker Port	<input type="text"/>
Client ID	<input type="text"/>
Connection Timeout/s	<input type="text" value="30"/>
Keep Alive Interval/s	<input type="text" value="60"/>

Step 3: Select the authentication method required by the server.

If you select user credentials for authentication, you need to enter the username and password for authentication.

User Credentials

Enable	<input checked="" type="checkbox"/>
Username	<input type="text"/>
Password	<input type="password"/>

If certificate is necessary for verification, please select mode and import CA certificate, client certificate and client key file for authentication.

TLS

Enable	<input checked="" type="checkbox"/>
Mode	<input type="text" value="Self signed certificates"/>
CA File	<input type="text"/> <input type="button" value="Browse"/> <input type="button" value="Import"/> <input type="button" value="Delete"/>
Client Certificate File	<input type="text"/> <input type="button" value="Browse"/> <input type="button" value="Import"/> <input type="button" value="Delete"/>
Client Key File	<input type="text"/> <input type="button" value="Browse"/> <input type="button" value="Import"/> <input type="button" value="Delete"/>

Step 4: Enter the topic to receive data and choose the QoS.

Data Type	topic	
Uplink data	<input type="text" value="device/test"/>	<input type="text" value="QoS 0"/>
Downlink data	<input type="text"/>	<input type="text" value="QoS 0"/>
Multicast downlink data	<input type="text"/>	<input type="text" value="QoS 0"/>
Join notification	<input type="text"/>	<input type="text" value="QoS 0"/>
ACK notification	<input type="text"/>	<input type="text" value="QoS 0"/>
Error notification	<input type="text"/>	<input type="text" value="QoS 0"/>
Request data	<input type="text" value="/event/request"/>	<input type="text" value="QoS 0"/>
Response data	<input type="text" value="/event/response"/>	<input type="text" value="QoS 0"/>

4.9 Device Configuration

Go to “Device” page and click “Add” to add LoRaWAN® node devices. Please select correct device profile according to device type.

General Applications Profiles **Device** Gateways Packets

Import this file to add bulks of devices.

4.10 Send Data to Device

1. Go to “Network Server” > “Packets”, check the packet in the network server list to make sure that the device has joined the network successful.

1122612191	868100000	SF7BW125	-	-	17	0	JnAcc	2019-08-06T09:22:29+08:00	!
112261219	868100000	SF7BW125	9.5	-77	18	0	JnReq	2019-08-06T09:22:29+08:00	!

2. Fill in the device EUI or select the multicast group which you need to send downlinks. Then fill in the downlink commands, ports.

Send Data To Device

Device EUI	Type	Payload	Fport	Confirmed
11226121913	ASCII	15	15	<input checked="" type="checkbox"/>

3. Click “Send”.

4. Check the packet in the network server list to make sure that the device has received this message successful. It's suggested to enable “Confirmed”. Multicast feature does not support confirmed downlinks.

Send Data To Device

Device EUI	Type	Payload	Fport	Confirmed
11226121913	ASCII	15	15	<input checked="" type="checkbox"/>

You can click “Refresh” to refresh the list or set automatic refreshing frequency for the list.

If the device's class type is Class C, then the device will constantly receive packets.

This packet's type is DnCnf (Downlink Confirmed Packet) and if the packet's color is gray, then it means the packet cannot be transmitted now because at least one message has been in the queue. If the packet record is white, it means the packet has been delivered successfully.

1122612191311123	869525000	SF12BW125	-	-	6	2	DnCnf	2019-08-06T09:22:55+08:00	Success !
1122612191311123	0				6	2	DnCnf		Pending !

If the device receives this downlink confirmed packet, then the device will reply “ACK” when delivering next.

Device EUI	Frequency	Datarate	SNR	RSSI	Size	Fcnt	Type	Time	Details
1122612191311123	868300000	SF10BW125	-	-	0	3	DnUnc	2019-08-06T09:23:44+08:00	!

4.11 Node-RED

4.11.1 Start the Node-RED

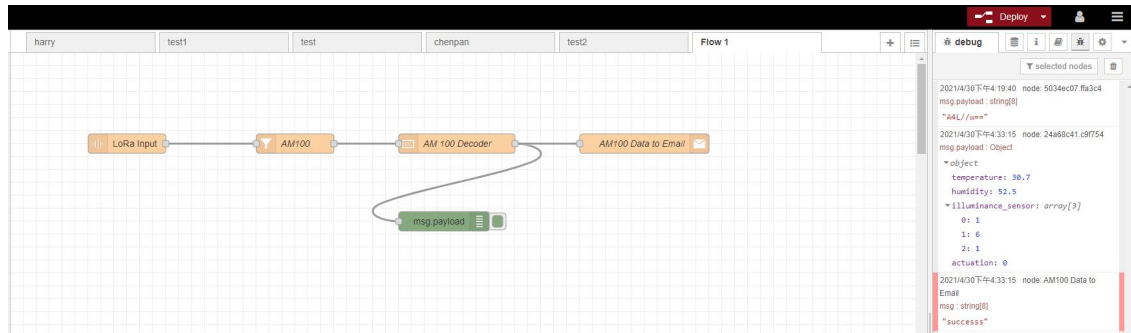

1. Go to "App > Node-RED" to enable the Node-RED feature.
2. After enabled, click "Launch" to go to the Node-RED web GUI and to log in with the same username and password as gateway.

4.11.2 Send Data by Email

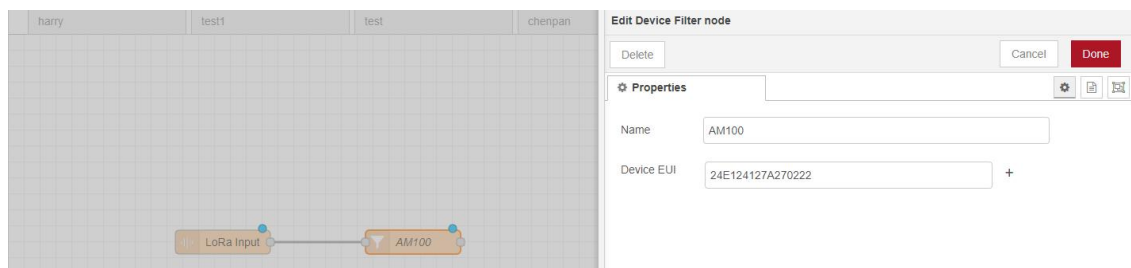

Application Example

Send AM104 device data by Email.

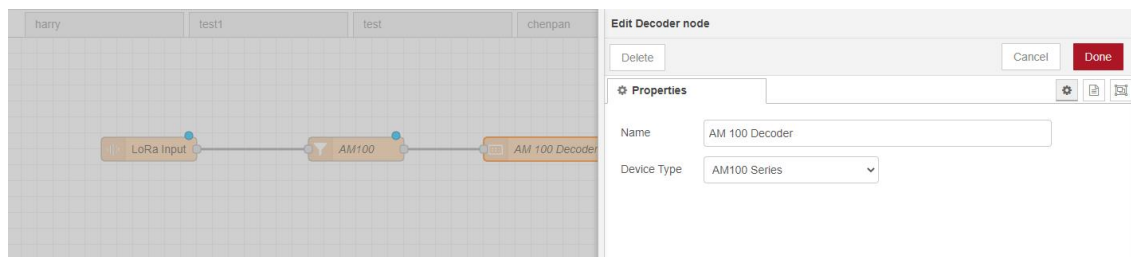

Configuration Steps

1. Add a "LoRa Input" node. Before adding please ensure network server mode is enabled and LoRaWAN devices have joined the network.
2. If you add many devices and only need one device data, add "Device Filter" node behind the "LoRa Input" and type the device EUI.

3. Add a "Decoder" node to decode the Milesight sensor data.

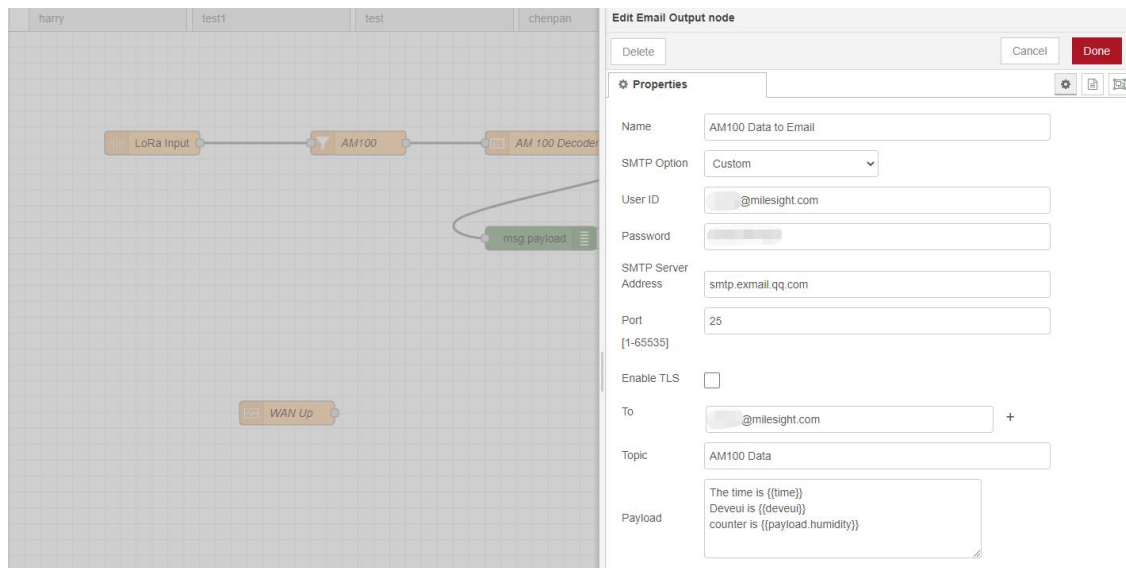

4. Add an "Email Output" and type the SMTP client settings, destination email address and contents. Example content:

The time is {{time}}

Deveui is {{deveui}}

Humidity is {{payload.humidity}}

**Note:**

- 1) When you select SMTP Option as "Same as Gateway", go to **System > General Settings > SMTP** to configure the SMTP clients.
- 2) Basic format to call LoRaWAN node data is `{{(property name)}}`, you can click "Help" page for more info about the Email or SMS payload format.
- 3) If you need to check the output content in every node, please add debug node.
5. After completing the configuration, click "Deploy" to save all your configuration.

6. When AM104 sends data to gateway, gateway will transfer the data to email.
